# SPECIAL ANNOUNCEMENT

## ERIC DIGESTS ONLINE (EDO)
## A New Full Text Database

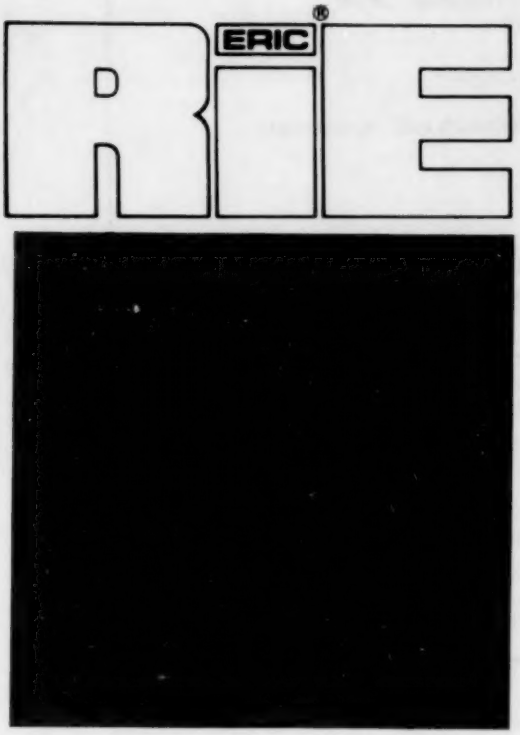
ERIC DIGESTS ONLINE (EDO), a full text database of short topical reports on education (called "Digests") from the 16 ERIC Clearinghouses, is now available on ED-LINE (an online information service for educators) via the online network known as The Source.

Users of EDO are able to access ERIC Digests through either menus or key words. A special feature permits users to comment on (or to read others' comments on) Digests in a field called "User Notespace."

Examples of titles in the new file are: "Full Day or Half Day Kindergarten?," "Qualities of Effective Writing Programs," "Dismissing Incompetent Tenured Teachers," and "Part-Time Faculty: Higher Education at a Crossroads." New Digests will be added to the EDO file on a monthly basis.

EDO is coordinated by project staff at the ERIC Clearinghouse on Elementary and Early Childhood Education, with the cooperation of the 15 other ERIC Clearinghouses.

Funding for EDO is provided by the Office of Educational Research and Improvement (OERI), U.S. Department of Education. Additional information and sample Digests may be obtained by writing to EDO Project, ERIC Clearinghouse on Elementary and Early Childhood Education, 805 W. Pennsylvania, Urbana, IL 61801 (217-333-1386).



For information on subscribing to The Source and ED-LINE, call ED-LINE at (703) 528-5840.

September 1986

Volume 21 • Number 9

*Resources in Education (RIE)* is processed for printing by ORI, Inc., under contract with the U.S. Department of Education, Office of Educational Research and Improvement (OERI), and published monthly by the U.S. Government Printing Office (GPO) with printing funds approved by the Office of Management and Budget. Contents do not necessarily reflect official OERI policy.

Copies of *RIE* are available from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington, D.C. 20402. Inquiries regarding subscription prices (12 issues/year) and single issue prices should be directed to the Superintendent of Documents.

Two *Semiannual Indexes* to *RIE* (January-June and July-December) are also available from GPO. Contact the Superintendent of Documents for prices.

# Introduction

***RESOURCES IN EDUCATION*** **(RIE)** —A monthly abstract journal announcing recent report literature related to the field of education, permitting the early identification and acquisition of reports of interest to the educational community.

**Sponsor: Educational Resources Information Center (ERIC)**
**Office of Educational Research and Improvement (OERI)**
**U.S. Department of Education**
**Washington, D.C. 20208**

ERIC is a nationwide information network for acquiring, selecting, abstracting, indexing, storing, retrieving, and disseminating significant and timely education-related reports. It consists of a coordinating staff in Washington, D.C. and 16 clearinghouses located at universities or with professional organizations across the country. These clearinghouses, each responsible for a particular educational area, are an integral part of the ERIC system. The clearinghouses are listed on the inside back cover.

**Organization of Journal:** *Resources in Education* is made up of resumes and indexes. The resumes provide descriptions of each document and abstracts of their content. Resumes appear in a "Document Section" and are numbered sequentially by an accession number beginning with the prefix ED (*ERIC Document*). The indexes appear in an "Index Section" and provide access to the Resumes by Subject, Personal Author, Institution, and Publication Type.

**Availability of Documents:** The documents cited in *Resources in Education*, except as noted, are available from the ERIC Document Reproduction Service (EDRS), in both microfiche (MF) and paper copy (PC), or microfiche only. Availability in microfiche only may be determined by the source, for proprietary or copyright reasons, or by ERIC for reasons related to legibility and reproducibility. The price per document is based on the number of pages and is subject to change over time. An ERIC Price Code Schedule permits the user to convert all price codes to actual dollar amounts. Current price information for documents, microfiche, and subscriptions to microfiche collections is to be found in the section entitled "How to Order ERIC Documents" in the most recent issue of RIE.

**How to Submit Documents to ERIC:** If you have documents that you would like to have considered for announcement in *Resources in Education* (RIE), you should send clean, legible copies (in duplicate, if possible) to the ERIC Processing and Reference Facility, 4833 Rugby Avenue, Bethesda, MD 20814. A reproduction release, giving ERIC permission to reproduce in paper copy and microfiche (or microfiche only), and signed by the author or official representative of the source institution, is requested for all documents selected for inclusion in RIE. Standard reproduction release forms may be obtained from the ERIC Facility (a sample appears at the back of this issue of RIE).

**How To Order RIE:** The U.S. Government Printing Office (GPO) prints *RIE* and functions as subscription agent. Detailed subscription information appears on the page in the back of *RIE* entitled *"How to Order* ***RESOURCES IN EDUCATION****."*

# HIGHLIGHTS Of Special Interest

## ERIC Clearinghouse Publications

This page highlights publications announced in this issue of *Resources in Education* which were created by the ERIC Clearinghouses and which have been selected as having special significance for educators. For each brief citation appearing here, there is a full abstract appearing under the same ED number in the pages of the issue.

In addition to collecting the literature of education for announcement in *Resources in Education* and *Current Index to Journals in Education*, the ERIC Clearinghouses analyze and synthesize the literature in a number of different formats designed to compress the vast amount of information available and to meet the varying needs of ERIC users. These formats include research reviews, state-of-the-art studies, interpretive studies on topics of high current interest, research briefs, annotated bibliographies, and compilations. While some publications are comprehensive reviews designed for those who are interested in pursuing a subject in depth, others are brief analyses designed for the busy practitioner whose time for staying abreast of new developments in education is limited.

ERIC publications are published either by the ERIC Clearinghouses responsible for producing them or through cooperative arrangements with other organizations. Copies are usually available directly from the responsible Clearinghouse or from the source listed in the citation. In addition, the publications announced in *Resources in Education* are contained in all ERIC microfiche collections, and are available in paper copy and/or microfiche from the ERIC Document Reproduction Service (EDRS), 3900 Wheeler Avenue, Alexandria, Virginia 22304.

# DOCUMENT SECTION

# SAMPLE RESUME

# Document Resumes

The document resumes in this section are arranged in numerical order by ED number, and also alphanumerically by Clearinghouse prefix and Clearinghouse accession number.

As explained in the Introduction, each Clearinghouse focuses on a specific aspect of education. The reader who is interested in one of these major aspects (e.g., Reading) may, however, find pertinent resumes among the entries of virtually any Clearinghouse, dependent on the orientation of the document. For this reason, it is important to consult the Subject Index if a comprehensive search is desired.

The following is a list of Clearinghouse prefixes and names used in this Section, together with the page on which each Clearinghouse's entries begin:

| | Page |
|---|---|
| AA—ERIC Processing and Reference Facility | 1 |
| CE—Adult, Career, and Vocational Education | 1 |
| CG—Counseling and Personnel Services | 30 |
| CS—Reading and Communication Skills | 43 |
| EA—Educational Management | 67 |
| EC—Handicapped and Gifted Children | 80 |
| FL—Languages and Linguistics | 90 |
| HE—Higher Education | 100 |
| IR—Information Resources | 117 |
| JC—Junior Colleges | 133 |
| PS—Elementary and Early Childhood Education | 146 |
| RC—Rural Education and Small Schools | 154 |
| SE—Science, Mathematics, and Environmental Education | 162 |
| SO—Social Studies/Social Science Education | 171 |
| SP—Teacher Education | 180 |
| TM—Tests, Measurement, and Evaluation | 189 |
| UD—Urban Education | 201 |

Available from—Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. On annual subscription, $56.00 (Domestic), $70.00 (Foreign).

Pub Type— Reference Materials - Bibliographies (131) — Collected Works - Serials (022)

**EDRS Price - MF03 Plus Postage. PC Not Available from EDRS.**

Descriptors—*Abstracts, Catalogs, Education, *Educational Resources, *Indexes, Resource Materials

Identifiers—*Resources in Education

Resources in Education (RIE) is a monthly abstract journal that announces (catalogs, indexes, abstracts) documents of interest to the educational community (including researchers, teachers, students, school board members, school administrators, counselors, etc.). Each issue announces approximately 1,100 documents and provides indexes by Subject, Personal Author, Institution, Publication Type, and ERIC Clearinghouse Number. This special Computer Output Microfiche (COM) edition is prepared directly from the ERIC magnetic tape database prior to publication of the printed journal and therefore is lacking the cover and other regular introductory and advertising matter contained in the printed journal. The first accession in each issue of RIE is the issue itself. In this way, the monthly microfiche collection for each issue is immediately preceded by a microfiche index to that collection. This practice began with the RIE issue for May 1979. (LRS/WTB)

Descriptors—Computer Assisted Instruction, Computer Literacy, Computer Managed Instruction, *Computer Oriented Programs, *Computers, Courseware, *Demonstration Programs, Educational Research, *Home Economics Education, *Needs Assessment, Postsecondary Education, *Research Projects, Secondary Education, Teacher Attitudes, Teacher Education, Teacher Educators

A study determined computer research and exemplary project needs in home economics education, identified such projects, and analyzed the relationship of research and exemplary project needs to projects identified. The questionnaire instructed respondents to describe their perceptions of research needs and exemplary project needs related to computers in home economics education and to identify and describe computer-related research and exemplary projects completed, underway, or planned in home economics education. The 381 responses (out of a possible 809) included 218 questionnaires and 163 follow-up postcards. Of the 218 respondents, 77% were teacher educators, 15% state supervisors, and 8% "other." The most frequently cited perceived research needs related to the concepts of computers and learning and instructional software. The most frequently perceived exemplary project needs were computers and learning and instructional software. Analysis of research projects described indicated that action research studies were the most common, that the most common research subjects were inservice home economics teachers, and that most projects were comprehensive in content covered. Analysis of exemplary projects described showed that most provided inservice for teachers and dealt with software or courseware applications at the secondary level. In general, the directions of research projects identified were consistent with needs identified by professionals. The exemplary projects described appeared to be progressing toward stated needs for such programs. Appendixes include summary tables and the survey instrument. The attached supplements to this report consist of two lists of respondent names (including institutions and addresses) and two sets of outline descriptions for the research and exemplary projects respectively. **The Indiana Adult Literacy Initiative Replication Guide.**

Indiana State Dept. of Public Instruction, Indianapolis. Div. of Adult and Community Education.

Spons Agency—Department of Education, Washington, DC.

Pub Date—Jan 86

Note—77p.

Pub Type— Guides - Non-Classroom (055)

**EDRS Price - MF01/PC04 Plus Postage.**

Descriptors—Adult Basic Education, *Adult Education, *Adult Literacy, *Illiteracy, *Literacy Education, *Program Development, Program Implementation, *State Programs

Identifiers—Indiana, *Indiana Adult Literacy Coalition, Indiana Adult Literacy Initiative

This replication guide describes the Indiana solution to the adult illiteracy problem–the inception of the Indiana Adult Literacy Initiative and the formation of the Indiana Adult Literacy Coalition. These four strategies promoted by the Initiative for developing and implementing programs are cited: volunteerism, public-private sector partnerships, networking among community members and adult education professionals, and instruction. Discussion follows of the social change strategies that possess demonstrated effectiveness and have contributed to the success of the Initiative. They are (1) obtaining support from the highest authority, (2) building a communication and relationship network, (3) obtaining administrative support and developing an administrative structure, (4) developing a comprehensive plan, and (5) disseminating information about products to potential replicators. Thirteen suggestions–what the Indiana Adult Literacy Coalition believes are its "secrets of success"–are then listed. Appendixes, amounting to over one-half of the guide, include profiles of Coalition exemplary programs, 1984; samples of brochures and news coverage of Coalition activities; the Indiana Adult Literacy Initiative 1985-86 Plan; and bibliography of resources. **An Opportunity for a New Beginning. A Teacher's Guide for Vocational Experiences.**

Hardin County Board of Education, Elizabethtown, Ky.

Spons Agency—Kentucky State Dept. of Education, Frankfort. Office of Vocational Education.

Pub Date—20 Nov 84

Note—128p.

Pub Type— Guides - Classroom - Teacher (052)

**EDRS Price - MF01/PC06 Plus Postage.**

Descriptors—Alcohol Education, *Basic Skills, Communication Skills, *Computer Literacy, Curriculum Guides, *Disabilities, Dropouts, Drug Education, Employment Opportunities, Employment Potential, *Group Guidance, Learning Activities, Library Skills, Mathematics Skills, Objectives, Peer Influence, Pretests Posttests, Reading Skills, *Special Education, *Vocational Education, Writing Skills

Identifiers—*Special Needs Students

This handbook provides teachers with a vocational experience curriculum for special vocational education students in Kentucky. Topics of the 18 lessons are pretest of basic skills, computer instruction, group guidance–dropping out of school, reading–increased awareness of career opportunities, language arts–develop communication skills through writing letters of application, employability skills, mathematical operations, money and work, group guidance–drug and alcohol awareness, language arts–develop communication skills through writing request letters and personal resumes, library skills, community service and your job, computing mathematical averages, fractions, group guidance –peer influence, group guidance–opportunities available at school, library skills, and posttest. An information sheet for each lesson presents objective, suggested activities, a list of suggested resources, and evaluation. These types of materials may also be provided: worksheets, information sheets, examples, and tests. Answer keys to worksheets and tests are included. (YLB)

Descriptors—Articulation (Education), *Associate Degrees, Community Colleges, *Course Descriptions, Educational Facilities, Educational Resources, Information Sources, *Nursing Education, Program Descriptions, *Program Development, Program Guides, Two Year Colleges

Identifiers—Florida

This program guide is intended to help Associate Degree Nursing (ADN) instructors in Florida develop and/or update ADN programs. The first part is the final report of the project that developed the guide. Section I of the guide provides a description of the occupation, student admission criteria, retention and withdrawal standards, and program standards. A program outline contains a program description and a sample generic "integrated model" curriculum and a sample "nursing model" licensed practical nurse (LPN) to ADN transition curriculum. Generic ADN course outlines and LPN to ADN transition program course outlines include course descriptions, placement, time allotment, course objectives, units of instruction, texts, and evaluation methods. Other contents of section I are a listing of student performance standards, clinical competencies, and information on student organizations. Section II defines faculty standards. Section III addresses facilities, including facility design criteria and lists of equipment for simulated client care and audiovisual and instructional equipment. In section IV on instructional resources are found information on clinical agencies' contractual agreements and listings of print learning resources (textbooks and periodical literature), publishers (and addresses) of audiovisual software learning resources, and addresses of professional organizations and support services. Appendixes include sample forms and materials from ADN programs. (YLB)

**Computerized Data Management System for Competency Based Vocational Education. Final Report from August 20, 1984 to June 30, 1985.**

Saint Petersburg Vocational Inst., FL.

Spons Agency—Florida State Dept. of Education, Tallahassee. Div. of Vocational Education.

Pub Date—31 Aug 85

Note—43p.; The diskette developed by this project is not included.

Pub Type— Reports - Descriptive (141)

**EDRS Price - MF01/PC02 Plus Postage.**

Descriptors—*Competency Based Education, *Computer Managed Instruction, *Computer Oriented Programs, Data Processing, *Management Information Systems, *Microcomputers, Postsecondary Education, *Vocational Education

This report describes the development of a computerized data management system using microcomputers. Intended to assist teachers and administrators in vocational centers in managing competency-based vocational education (CBVE) instructional programs, the system was designed to be used on an individual computer, be used in networking, or be transferred to a mainframe computer. The computerized data management system was produced on diskettes compatible with TRS-80, IBM PC, and IBM-compatible computers. An appendix contains the handbook that consists of explanations for all printouts on the mainframe computer as well as copies of all printouts on the microcomputer. Descriptions of the various documents and printouts comprising the system are organized around three basic sections that correspond to three data management concerns faced in implementing competency-based learning–documenting program and task requirements, monitoring individual and class progress, and documenting and reporting mastery. A brochure explaining the computerized management system is also appended. (YLB)

Identifiers—Brevard Community College FL, *Response Rates (Questionnaires)

A plan was developed to improve followup study response rates by refining techniques for data collection and improving student motivation to respond to daily requests. Factors affecting response rate to followup surveys were investigated, and alternative approaches were recommended. Findings indicated that current procedures–two mailouts of questionnaires to program completers followed by computer-generated postcards–were insufficient. The recommended followup procedure involved inclusion of the Social Security number on the Brevard Community College (BCC) completer and leaver list to make cross-referencing with the feedback list easier and more accurate, continuation of a revised mailed questionnaire that includes only the state-mandated questions, and provision of information concerning the impact of the new legislation about required placement rates in the cover letter. Another recommendation was increasing the amount of information gathered before a student leaves BCC through use of the accountability form for all vocational certificate programs and student completion of a program pre-completion form that provides employment data and name and address of an alternate contact. Upon implementation of the recommendations, the response rate substantially improved. Increased interest by instructors and division chairs helped in locating more graduates, and telephone calls to non-respondents contributed positively. (Sample information concerning the forms, questionnaires, and cover letters are appended.) (YLB)

**Employment Success of Handicapped Individuals via Three Transition Strategies. Final Project Report, September 1, 1984-August 30, 1985.**

Florida Univ., Gainesville.

Spons Agency—Florida State Dept. of Education, Tallahassee. Div. of Vocational Education.

Pub Date—30 Aug 85

Note—84p.

Pub Type— Reports - Research (143) — Tests/Questionnaires (160)

**EDRS Price - MF01/PC04 Plus Postage.**

Descriptors—Career Education, *Disabilities, *Education Work Relationship, Employees, High Schools, Interviews, *Job Placement, *Success, *Transitional Programs, Use Studies, *Young Adults

Identifiers—*Resource Utilization

Through an examination of the transition process used by a representative sample of successfully employed handicapped individuals in Florida, specific transition strategies and the degree to which they were used were identified. Fifty successfully employed handicapped individuals participated. The high school experience was cited as essential in the provision of services and personnel to initiate and implement the transition process. Ongoing reinforcement by all family members, in combination and in isolation, provided essential support–both emotional and financial. An overwhelming majority of subjects cited a variety of types and combinations of services that were short-term, long-term, and/or ongoing. Some correlations were noted according to type of disability, but as a group, the provision of options and alternatives designed according to individual need was apparent. Most had employment experience during their high school years, whether independently or as part of a cooperative work experience program. Most agency services were supported through the efforts of the private sector or via state funding. Appendixes include listings of project staff and consultants, survey instruments, a workshop agenda, an outline of transition strategies, and references. (YLB)

Descriptors—*Competency Based Education, Field Tests, *Measurement Techniques, Pilot Projects, *Rating Scales, *Test Construction, Trade and Industrial Education, *Vocational Education, Welding

This report describes the production and pilot test of an assessment instrument for vocational education programs. The instrument was designed to be used following a site visit that includes a 30- to 45-minute interview with the program instructor and a 30-minute interview with one small group of

students. Reliability and validity information was collected but was weaker than considered desirable; an adequate study was recommended. Following the 10-page narrative are extensive appendixes, including the program description instrument. The instrument provides for rating each of the items that are divided into eight areas: knowledge instruction, performance instruction, individualization, program content specification, knowledge assessment, performance assessment, grading, and related factors. A site visitor's interview outline concludes the instrument. Other appendixes include scoring instructions, frequency distributions for experts' judgment of items, program profiles for 16 welding and 14 other programs, frequency distributions of item ratings for 30 programs, and tables of scale scores for the 16 welding and 14 other programs. (YLB)

Descriptors—College Graduates, *Data Collection, Followup Studies, *Graduate Surveys, *Job Placement, Motivation Techniques, *Responses, Surveys, Two Year Colleges, *Vocational Education, *Vocational Followup
Identifiers—Hillsborough Community College FL, *Response Rates (Questionnaires)
A timely and coordinated system to conduct placement and followup studies was developed by Hillsborough Community College. The project was intended to increase the response rate of program completers and leavers and the placement rate of program completers in order to meet the placement rate set by the 1983 Florida legislation. Vocational faculty and administrators cooperated by completing a placement survey questionnaire and a referral form for completers requiring job placement assistance. Job placement specialists contributed to the documentation of placement in a similar manner, and completers requiring job placement assistance were referred to them. A survey questionnaire was mailed to all program completers and leavers to collect placement data. Second and third mailings to non-respondents followed. The Feedback Tape from the Florida Division of Labor and Employment Security provided additional information matching program completers with students in the state university system and employees as reported by employers. An overall response rate of 95.6 percent of all vocational program completers demonstrated the effectiveness of other sources of placement documentation in addition to the survey alone. The response rate of program leavers increased by more than 100 percent. The placement rate was considerably higher than for two previous years. (YLB)

Descriptors—*Education Work Relationship, *Employment Services, *Job Placement, *Machinists, *Outcomes of Education, Postsecondary Education, Program Effectiveness, Questionnaires, State Surveys, Statewide Planning, *Trade and Industrial Education
Identifiers—*Florida
A study identified and assessed the relative importance of the factors contributing to the placement of students completing postsecondary machine shop programs in Florida. Data were collected from surveys of 1982-1983 program completers and instructors and placement officers at 19 of Florida's 23 postsecondary-level machine shop programs, as well as from in-depth case studies of 9 of the programs. Included among those factors identified as having a positive influence on student placement were adequacy of training, commitment of school personnel to placement of graduates, involvement with a cooperative program, relationship between instructor and employer or graduate and employer, and help from friends or relatives. Graduates' lack of adequate work experience and specific training, shortage of available jobs in the area, and insufficient employability skills training for students were the main factors cited as having a negative impact on student placement. Machine shop programs in the State were urged to develop more cooperative programs, and instructors were encouraged to provide more assistance to students in developing such employability skills as resume writing and preparing for job interviews. (Appendixes to this report include a list of postsecondary machine shop programs in Florida, cover letters to program completers and practitioners participating in the study, and the survey instruments.) Note—10p.; For a related document, see ED 244 058.
Pub Type— Reports - Evaluative (142)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Consumer Economics, *Consumer Education, *Courseware, *Daily Living Skills, Disabilities, Disadvantaged, *Home Economics, Home Economics Skills, Instructional Material Evaluation, Secondary Education
Identifiers—*Courseware Evaluation
This courseware evaluation rates the "Personal Consumerism" program developed by Aquarius People Materials. (The eight-program series–not contained in this document–includes understanding labels, consumer help, consumer fraud, consumer law, comparative shopping, consumerism and you, reading an advertisement, and tips on buying a used car.) Part A describes the program in terms of subject area (consumer education), and hardware requirements (Apple II, IBM PC, JR, TRS 80 III); indicates its suitability for use with handicapped and disadvantaged students, grades 7-adult, with a reading level of grades 3-5; lists accompanying materials (teacher's guide); and estimates time for use (one hour). Availability information includes cost ($29.95 each), policies, and contact address. Part B contains the evaluation criteria in eight categories; reviewer ratings appear as yes, somewhat, no, and not applicable, with explanatory comments. Part C summarizes the evaluation. Strengths of this program are ease of reading, good remediation, and positive reinforcement. Weaknesses include inconsistency in presentation, some unclear directions, and no student evaluation. Summary ratings in the eight categories include the following: subject matter, technical presentation, student interaction, and program interaction–yes; student evaluation and documentation–somewhat; work behaviors and application, programs–not applicable. The courseware is recommended for use in a life skills curriculum. (SK)

Pub Type— Reports - Evaluative (142)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Adult Education, *Consumer Education, *Courseware, Extension Education, *Home Economics, Home Economics Skills, *Homemaking Skills, Instructional Material Evaluation, *Microcomputers, Secondary Education
Identifiers—*Courseware Evaluation
This courseware evaluation rates the "Microcomputer Applications in Vocational Education: Home Economics" program developed by the Illinois State Board of Education. (This series of programs–not contained in this document–includes interior decorating estimating, pounds away program, decision analysis, fiber care, clothing figure analysis, stain removal, consumer math, housing options, home loan analysis, personal budget, utilities, nutrition analysis, home owner's capital gain, measurement conversion, and recipe analysis.) Part A describes the program in terms of hardware requirements (Apple II, TRS 80 III, Pet Basic 3 Commodore), indicates its suitability for grades 11 through adult, and estimates time for use (15-20 minutes). Availability information includes cost ($11.00–Apple and TRS, $6.25–Pet) and contact address. Part B contains the evaluation criteria in eight categories; reviewer ratings appear as yes, somewhat, no, and not applicable, with explanatory comments. Part C summarizes the evaluation in terms of strengths (performs calculations related to home economics subjects and provides helpful information for homemakers) and weaknesses (no printed documentation and difficulty in reading the screen). A summary section shows that this courseware received overall ratings of "somewhat" in the categories of subject matter, technical presentation, student interaction, and documentation. (The program interaction, student evaluation, and work behaviors criteria were not applicable.) This courseware is recommended with reservations, due to difficulty in obtaining desired results. (SK)

This learning unit on needs and rewards is one in the Choice Series, a self-learning development program for supervisors. Purpose stated for the approximately eight-hour-long unit is to enable the supervisor to understand and list the needs that influence work behavior and devise ways in which a work system can be both productive and rewarding for the work team. An introduction provides an overview of the unit and lists unit objectives. Parts A through C contain informative material, activities and answer keys, self-checks and answer keys, and a summary. Topics include people at work, human needs, and job performance. Part D contains performance checks–an end check to be completed alone and a tutor check and work-based project. Part E consists of a brief unit review, extensions (print sources of additional information, such as units or sections in books), and a list of references. (YLB)

Identifiers—Great Britain
This learning unit on using graphs is one in the Choice Series, a self-learning development program for supervisors. Purpose stated for the approximately eight-hour-long unit is to enable the supervisor to look at the usefulness of graphs in displaying figures, use graphs to compare sets of figures, identify trends and seasonal variations in graphs; and make forecasts of the future by using graphs. An introduction provides an overview of the unit and lists unit objectives. Parts A through C contain informative material, activities and answer keys, self-checks and answer keys, and a summary. Topics include drawing graphs, reading graphs, and forecasting with graphs. Part D contains performance checks–an end check to be completed alone and a tutor check and work-based project. Part E consists of a brief unit review, extensions (print sources of additional information, such as units or sections in books), and a list of references. (YLB)

This student guide is intended to assist persons employed as supervisors in ensuring equality of treatment and opportunity in the workplace. Discussed in the first three sections are the following topics: equality at work (the meaning of the term equality, the importance of equality at work, inequality and unfairness at work, and procedures to determine whether inequality has occurred); laws relating to equality (who the law protects, what it aims to achieve and what it says, types of unlawful discrimination, and how to decide whether the law has been broken); ways of achieving equality in the workplace (preventing unlawful discrimination, making a commitment to equality, and achieving real equality). Each of these sections contains an introduction, sections of instructional text that are interspersed with reinforcing learning activities, and a section summary. The fourth part of the guide includes a series of performance checks (an end check, a tutor check, and a work-based project). Concluding the guide is a unit review that reviews the objectives addressed in the guide, describes related extension courses, and lists recommended reference materials. (MN)

This student guide is intended to assist persons employed as supervisors in recruiting, selecting, and inducting employees. Discussed in the first three sections are the following topics: the staffing process and the importance of good staff; recruitment and selection (job and ideal person profiles and job interview procedures); and induction (induction into the workplace, school leavers, and followup). Each of these sections contains an introduction, sections of instructional text that are interspersed with reinforcing learning activities, and a section summary. The fourth part of the guide includes a series of performance checks (an end check, a tutor check, and a work-based project). Concluding the guide is a unit review that reviews the objectives addressed in the guide, describes related extension courses, and lists recommended reference materials. (MN)

This student guide is intended to assist persons employed as supervisors in understanding the legal aspects of supervision. Discussed in the first four sections are the following topics: the nature of the law (criminal and civil law, why people obey the law, and the law and supervisors); health and safety at work (safety in the workplace, ways of encouraging safety, consequences of violating the law, and what the law can expect); employment contracts (spoken and written contracts, rights and obligations, changes in employment contracts, and breach of contract); and dismissal (circumstances for dismissal, dismissal procedures, and constructive dismissals). Each of these sections contains an introduction, sections of instructional text that are interspersed with reinforcing learning activities, and a section summary. The fifth part of the guide includes a series of performance checks (an end check, a tutor check, and a work-based project). Concluding the guide is a unit review that reviews the objectives addressed in the guide, describes related extension courses, and lists recommended reference materials. (MN)

This report concentrates on problems of displaced blue-collar and nonprofessional white-collar workers. Chapter 1 is a summary. Chapter 2 discusses policy issues and options focused on helping people prepare for worklife changes and helping workers to cope if displacement occurs. A definition and description of worker displacement are offered in chapter 3. Chapter 4 provides information on the relationship between displacement and economic growth, job losses, and job creation. National displaced worker programs are described and evaluated in chapter 5. Chapter 6 analyzes some of the more experienced displaced worker projects to illuminate common ingredients of success, issues in project design, and issues of concern to policymakers. Chapter 7 focuses on adult education services most likely to be useful to workers vulnerable to displacement. The potential of instructional technologies in delivering adult education is addressed in some detail. Barriers to adult education are also discussed. Chapters 8 and 9 address two causes of displacement–technological change and international competition. Chapter 10 focuses on causes and effects of displacement on homemakers and programs for displaced homemakers. (YLB)

Identifiers—*Florida
The research and development (R&D) projects funded by the Florida Division of Vocational Education are intended to have utility for vocational educators in their efforts to improve vocational education programs and practices. This project was conducted to determine why some R&D products are accepted by potential users while others are not and to find alternative methods, procedures, and opportunities for providing feedback to media designers and diffusion personnel regarding the effectiveness of their decisions. The following procedures were used to achieve a holistic approach: (1) reviews of the literature on instructional design and diffusion of innovations; (2) interviews with professionals knowledgeable about the packaging and dissemination of instructional materials; (3) qualitative descriptions (scenarios) of "ideal" procedures; and (4) analysis of the flow of activities depicted in the scenarios to determine alternative opportunities for obtaining feedback. As a result of the project, a model was constructed that can be used by instructional designers and specialists. The model describes events that can have an impact on instructional materials usage and focuses attention on variables that can influence acceptance and use. Opportunities for obtaining feedback on design and design decisions are identified and the advantages and disadvantages of each opportunity are discussed. Appendixes include descriptions of five scenarios and the Purposes by Environments Matrix and a listing of references. (Author/KC)

Identifiers—Florida
The purpose of this study was to identify and describe barriers to the implementation of competency-based vocational education (CBVE) in Florida's secondary schools and to recommend strategies/solutions to overcome these barriers. Implications for policy formation and for administrative action were to be drawn. This project used as its basis the information gained in an earlier study of postsecondary barriers to CBVE. To gain an insightful view of present implementation strategies, major emphasis was placed on gathering data by observation and interview in secondary vocational programs in a range of implementation settings. Project staff visited CBVE sites, estimated degree of implementation through a program assessment instrument, and noted program instructional procedures and management techniques. Interviews were conducted with school personnel to ascertain responses to a list of tentative barriers statements and to obtain recommendations for solutions. A final list of 57 perceived barriers to CBVE implementation was identified and verified. The barriers statements were organized into an 11-category grouping of convenience: administration, teachers, support staff, students, physical resources, program operation, school procedures, school climate, teacher training, state education agencies, and research and evaluation base. (The program description instrument for occupational vocational education programs is appended.) (YLB)

Identifiers—*Florida
Between September 1, 1984, and August 31, 1985, a study examined the barriers to enrollment in and completion of postsecondary-level nontraditional vocational education programs in Florida. Data were collected from students and faculty members at 36 of Florida's 59 area vocational-technical centers and community colleges as well as from on-site visits to institutions in Florida's five educational regions. Students indicated that recruitment strategies designed to appeal to their personal interests were more effective than recruitment strategies attempted through institutional measures (outreach recruitment, advertisements, media approaches). Students cited interest in their program and enjoyment of what they were doing as the two biggest reasons for completing programs, whereas faculty considered instructional-based support the primary factor responsible for retaining students in nontraditional programs. Situational barriers were more of a problem than were attitudinal and institutional barriers. These results suggest that faculty members should (1) become involved with institutional recruitment teams, (2) develop and implement individual recruitment strategies, (3) present a meaningful and accurate picture of their institution and concentrate on factors that are within the institution's control, and (4) encourage potential employers to hire nontraditional students at adequate salaries and with adequate opportunities for job advancement. (Appendixes to this report include samples of the correspondence, permission forms, guide sheets, and instruments used in the study.) (MN)

Five exemplary university field experience programs for individuals studying to become teachers were identified and examined in order to develop a model field experience program in teacher education. Programs at the following universities were examined: Ball State University (Indiana), Illinois State University, Millersville University (Pennsylvania), the State University of New York at Oswego, and the University of Wisconsin-Stout. The model field experience program called for the following three components: 100 contact hours of early field experience (a program, consisting of highly structured yet varied experiences that are closely coordinated with each of the courses in the professional sequence); a semester-long, full-time student teaching experience (a program involving eight weeks in a junior high school and eight weeks in a senior high school setting under the supervision of full-time faculty members in the university's industrial arts or technology education departments); and a first-year teacher program (a coordinated activity in which a university supervisor and a local mentor provide support to the new teacher). (This report includes a detailed description of the model with information concerning the linkages, objectives, activities, and contact hours involved in each stage in the proposed field experience program. Supportive information includes comments by case study participants.) (MN)

These proceedings contain 17 papers presented at a seminar to identify and evaluate research studies conducted in the past with a view to providing guidance and ready reference for those who wish to conduct research in the future. A summary of recommendations appears first. Issues, researchable questions, and suggestions are made in three areas: identification of profiles, resources, and needs of adult learners; motivation and mobilization techniques in adult education; and linkages of adult education programs with other development programs. These papers are presented: "The Nature and Scope of Research for Adult Education and Development" (V. Eswara Reddy), "Research in Adult Education" (S. C. Bhatia), "Questions in and Reflections on Adult Education Research" (James A. Draper), "Methodological Issues in Adult Education Research in India" (R. Jayagopal), "Profile Development of Target Groups for Adult Education and Action" (B. R. Patil), "Adult Education among the Tribal Communities in India: Problems and Prospects" (G. P. Descriptors—*Attitude Change, *Disabilities, Exceptional Persons, *Inservice Teacher Education, *Needs Assessment, Participant Satisfaction, Postsecondary Education, Professional Development, Secondary Education, *Teacher Attitudes, *Vocational Education Teachers
The current professional development needs (identification and remediation) of vocational teachers who teach handicapped children were studied. Data collection and analysis were used to answer three questions regarding (1) positive change in vocational teachers' attitudes toward disabled persons when their needs are assessed and provided for in staff development sessions, (2) clustering of vocational teachers' needs around certain issues, and (3) staff development sessions requested by vocational teachers to prepare them to teach handicapped children. Three relationships were investigated: teacher attitudes and training effects, needs-assessment-driven inservice sessions and teacher satisfaction, and teacher attitudes and training suited to perceived needs. Results indicated that teacher attitudes changed after inservice sessions, but not to a large degree. The average increase was five points on the Attitude toward Disabled Persons Scale. Needs-assessment-driven inservice was satisfying to teachers and perceived training needs were related to teacher attitudes, but again in a less than robust fashion. The priority needs areas of vocational teachers were for more pupil information and pertinent didactic materials and strategies delivered by resource personnel in person and/or delivered through courses, seminars, workshops, or school visitations. **Determining Perceptions of Vocational Agriculture Teachers toward Supervised Occupational Experience Programs in Tennessee. Research Report Series No. 9.**
Tennessee Technological Univ., Cookeville. Coll. of Agriculture and Home Economics.
Pub Date—Apr 86
Note—44p.
Pub Type— Reports - Research (143) — Tests/Questionnaires (160)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—*Agricultural Education, Enrollment, High Schools, School Policy, Student Organizations, Student Participation, *Supervised Farm Practice, *Teacher Attitudes, *Vocational Education, *Vocational Education Teachers
Identifiers—Future Farmers of America, Tennessee
A study investigated perceptions of high school vocational agriculture teachers of supervised occupational experience programs (SOEPs) in Tennessee. Specific objectives were to determine school policies related to SOEPs, number of students and types of SOEPs, and perceptions of various aspects of SOEPs. Mailed surveys were completed by 84 of 214 teachers. Findings indicated that the average 1984-85 enrollment for the responding departments was 98 students. SOEPs were required for enrollment in 35 percent of the programs. Major factors that hindered vocational agriculture departments from having SOEPs were: too many students with weak agricultural background or inadequate resources; large student-teacher ratios; and competing school activities. Departments with a high percentage of students in Future Farmers of America (FFA) had a high percentage of FFA members completing SOEPs. Five objectives for SOEP were rated above average in importance: enhance classroom instruction, develop management skills, prepare students for careers in agriculture/agribusiness, provide a link between vocational agriculture and FFA, and build character. Production agriculture was the most common type of SOEP conducted by students. Supervised farming programs and placement on farms were major types of SOEP alternatives teachers rated as most suitable. Teachers felt that the SOEP assistance they provided students was inadequate. (The instrument is appended.) (YLB)

**FloorPlan. Courseware Evaluation for Vocational and Technical Education.**
Ohio State Univ., Columbus. National Center for Research in Vocational Education.
Spons Agency—Office of Vocational and Adult Education (ED), Washington, DC.
Pub Date—6 Mar 86
Note—10p.; For a related document, see ED 244 058.
Pub Type— Reports - Evaluative (142)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Adult Education, *Computer Simulation, *Courseware, *Furniture Arrangement, *Home Economics, Instructional Material Evaluation, *Interior Design, Interior Space, Secondary Education
Identifiers—*Courseware Evaluation
This courseware evaluation rates the "FloorPlan" program developed by the Learning Seed. (The program–not included in this document–allows room design and arrangement to be performed on the computer screen.) The courseware was rated by a team of home economists participating in a network for the dissemination of courseware reviews. Part A describes "FloorPlan" in terms of topics (interior design, furniture arrangement, floor plans) and hardware requirements (Apple II and printer with Grappler interfacing), indicates its suitability for grades 7-adult, and lists accompanying materials (instruction booklet, object number card). Availability information includes cost ($39.00), policies, and contact address. Part B contains the evaluation criteria in eight categories; reviewer ratings appear as yes, somewhat, no, and not applicable, with explanatory comments. Part C summarizes the evaluation in terms of strengths (allows creativity and basic skills integration, is practical) and weaknesses (slow and difficult to work with, weak documentation). Summary ratings in the eight categories include subject matter, student interaction, and work behaviors–yes; technical presentation, program interaciton, and documentation–somewhat; and student evaluation and application programs–not applicable. The program is recommended for teaching basic interior design, following directions, mapping, and measuring. (SK)

Lake Washington Vocational Technical Inst., Kirkland, WA.
Spons Agency—Washington State Commission for Vocational Education, Olympia.
Pub Date—31 Dec 85
Note—109p.; Student Handbook and Electronics Math Processes and Solutions for Basic Mathematics for Electronics listed in document are not available from ERIC.
Pub Type— Guides - Classroom - Teacher (052)
**EDRS Price - MF01/PC05 Plus Postage.**
Descriptors—Basic Skills, Behavioral Objectives, Curriculum Development, *Disadvantaged, *Electronics, Instructional Materials, Learning Activities, Learning Modules, Lesson Plans, Material Development, Mathematical Formulas, *Mathematics Skills, Metric System, *Remedial Instruction, Secondary Education, *Technical Education, Vocabulary, Vocabulary Development
A project was undertaken to develop a remedial academic curriculum and materials that would help disadvantaged students gain the basic mathematics skills necessary to succeed in an electronics program. Major activities of the project included devel-

opment of a bibliography of currently available math resource books with materials appropriate for use with disadvantaged students, a school staff evaluation of the current electronics program with regard to students' math needs, evaluation of the remedial program currently in place for electronics students, and development of a student handbook that includes a step-by-step process for solving electronics-related algebra problems. Appendixes (the major portion of the report) include a discussion of the scope and sequence of electronics-related math concepts and processes; vocabulary, metric relationships, and mathematical formulas for electronic-related math; guidelines for using a three-prong model to plan instruction of electronics-related math; and a bibliography. Descriptors—*Enrollment Influences, Grade 10, Grade 11, High Schools, *High School Students, Regional Planning, *Regional Schools, *Student Attitudes, Student Recruitment, *Vocational Education, *Vocational Schools
A study examined the attitudes of 546 randomly selected 10th- and 11th-grade students attending 14 public high schools serving the Spokane Area Vocational Skills Center to determine who and what influenced students' decisions to enroll in the center. Parents, friends, and counselors were ranked as people who influenced the students' interest and enrollment in the skills center, with attenders indicating a more positive influence than nonattenders. Half the students felt that students should first hear of the skills center in ninth grade whereas 26 percent felt they should be made aware of the center in the eighth grade. The center's general brochure, video presentation, and slide show were considered effective methods of informing students about the skills center. Responses from nonattenders indicated that the skills center's image is good. Among those areas of the center's operation that were mentioned as problems were credits for graduation, graduation and college requirements, lack of skills center offerings, science and math requirements, length of the skills center day, and the need for semester classes. A survey of selected members of the area's business community indicated that the curriculum offered at the skills center is now important and will continue to be important in 6 years. (This report includes the student and business survey instruments and the survey computer program.) (MN)

Descriptors—*Community Colleges, Cooperative Planning, Educational Change, Educational Cooperation, Educational Needs, Educational Trends, *Futures (of Society), Institutional Cooperation, Labor Market, *Labor Needs, Needs Assessment, Questionnaires, *Shared Facilities, Shared Resources and Services, State Surveys, Statewide Planning, *Technical Education, *Technological Literacy, Two Year Colleges
Identifiers—*Washington
A study examined the technological literacy needs of persons trained at community colleges, current labor market trends in the state of Washington, and possible resource-sharing models for use within the Washington State Community College system. Data were collected from 25 mail questionnaires, phone interviews with personnel from 114 companies throughout Washington, and site visits to 10 companies located in Spokane. Companies using advanced technology expressed the need for community college-trained personnel with data/information-, people-, and equipment-related competencies. Occupational growth in Washington is expected to be modest through 1990, with demand centering mainly in the service industries (particularly marketing and sales, office/clerical occupations, and culinary/hospitality services): The State's community college system currently has as least five traditional programs in which supply exceeds demand by more than 300 percent. Three resource-sharing models calling for equipment sharing, equipment and facility exchange, and college consortia were suggested as possibly being feasible in Washington's community college system. (Appendixes to this report include a list of project goals, a copy of the overview of occupation clusters, the pilot and a copy of the mailed survey instrument, copies of the project's mailed survey instrument and personal visitation form, and personal visitation data.) Descriptors—Adult Education, Audiovisual Instruction, *Child Caregivers, *Curriculum Development, *Day Care, Distance Education, Educational Television, *Material Development, *Occupational Home Economics, Postsecondary Education, Pretests Posttests, *Telecourses, Two Year Colleges
A course syllabus for one-, two-, and four-year institutions was developed as a possible format for awarding credit for televised training of child care providers. "Spoonful of Lovin'" was designed as a series of five 30-minute programs to develop child care skills necessary to family day care providers, parents, and teachers. Episodes explored fundamentals of establishing a home day care business, normal child development, guiding youngsters' behavior, planning activities for children, and creating safe, effective learning environments. Participants in televised course delivery were 15 training institutions–2 vocational technical institutes, 10 community colleges, and 3 universities. In addition to a telecourse offering, a wide variety of options was developed using the "Spoonful of Lovin'" tapes, including combination with ongoing coursework, seminars, workshops, and graduate-level studies. The project provided access to training and training materials to 13,000 providers statewide at a cost of $4.00 per person. Pre- and post-tests administered to 45 students enrolled for credit in the telecourse series at Edmonds Community College indicated improved knowledge. (Appendixes, amounting to approximately two-thirds of this report, include survey responses, publicity, and teacher's guide to the telecourse with course description, objectives, and outline and study guides.) This report includes a description of a project to develop and field-test competency-based instructional materials for handicapped students enrolled in regular vocational agriculture programs; a list of project advisory personnel; the clusters of skills identified as appropriate for handicapped students enrolled in courses in dairy production, horse husbandry, plant production, and agricultural mechanics; and sample task instruction sheets. Checklists for use in evaluating students' skills in the following areas are provided: employability; occupational safety; production economics, management, and mechanics; and broiler and egg, dairy, swine, and beef cattle production. Included among the topics covered in the sample task instruction sheets provided are various recordkeeping, technical, feeding, breeding, calving, grooming, handling, planting, and growing skills. Each task instruction sheet contains some or all of the following: a task statement, a task description, a list of materials and tools needed, a description of information to be provided to students, lists of skills addressed and new words, and student evaluation criteria in the form of task statements. During the course of the project, materials for use in teaching 53 separate skills in the 4 target subject areas were developed and field-tested. The personnel list, skills lists, and task instruction sheets are contained in appendixes which constitute the bulk of the document. (MN)

Descriptors—*Allied Health Occupations Education, Allied Health Personnel, Behavioral Objectives, *Biomedical Equipment, *Computer Literacy, *Curriculum Development, *Equipment Utilization, Learning Activities, Medical Services, Secondary Education, *Technological Advancement
A project was undertaken to develop new curricu-

lum materials that could be incorporated into an existing health assistant program to cover recent advances in health care technology. Area physicians' offices were toured and meetings were held with administrators of local hospitals in order to discover what kinds of advances in health care technology were in use locally. Next, equipment and instructional materials were developed to update health services training in the following areas: using computers, word processing, using electrocardiography equipment, and implementing blood-drawing and blood analysis techniques. In addition, courseware was obtained to supplement existing training in such areas as venereal disease, drugs, birth defects, health maintenance, nutrition, and typing and word processing skills. The bulk of the report consists of project-developed learning guides dealing with: mounting an electrocardiogram; performing blood sugar testing; assisting a physician in detecting and assessing heart muscle damage; analyzing blood; performing cholesterol, hemoglobin, blood glucose, and prothrombin time tests using the latest equipment; and mastering venipuncture. Each guide contains some or all of the following: task and purpose statements, a terminal performance objective, safety factors, a list of equipment and supplies needed, a performance guide, related information, a student assignment, vocabulary, review questions, and an instructor checklist. Descriptors—*Cutting Scores, Educational Policy, Error of Measurement, Evaluation Criteria, *Minimum Competency Testing, Norm Referenced Tests, Pass Fail Grading, Policy Formation, Postsecondary Education, Scoring, *Scoring Formulas, State Standards, *Statewide Planning, Tables (Data), Teacher Evaluation, Testing Programs, Test Interpretation, Test Norms, *Vocational Education, Vocational Education Teachers

Identifiers—National Occupational Competency Testing Institute, *Pennsylvania, *Teacher Competencies

Procedures for establishing the cutoff scores for the occupational competency exams administered to individuals graduating from Pennsylvania vocational teacher education programs were reviewed. A total of 595 National Occupational Competency Testing Institute (NOCTI) Exams administered in 43 occupations or trades at three colleges between the years 1979 and 1984 were reviewed. Test scores were compared with respect to exam date, test site, exam code, percentage of correct responses for written and for performance tests, and pass/fail decision for written and performance tests respectively. It was concluded that Pennsylvania could and should use the national norms provided on those exams to make the pass/fail decisions for prospective vocational teachers. Whatever decision is made concerning a cutoff for the performance exam, it should be based on the same rationale and be consistent with the method used for the written exam. The 95 percent confidence interval (two standard errors [SE]) should be used in implementing any cutoff decisions. In those cases where the two SE cutoff does not result in a sufficient supply of vocational teachers, a mechanism should be implemented to permit individuals to teach temporarily while they improve their occupational knowledge until they meet minimum standards. (Appendixes to this report include six tables detailing the test score statistics compiled.) (MN)

This booklet is intended to serve as a mechanism whereby special educators and vocational instructors can work cooperatively in developing an Individualized Educational Plan (IEP) for special needs students. The planner identifies appropriate occupational areas (horticulture, apparel assembly, carpentry, food service, and plumbing) and then proceeds to determine the vocational, safety, mathematics, and vocabulary tasks necessary for minimum performance in the occupation. Each section of the planner contains some or all of the following: shop name and subject area; an educational objective; frustration, instructional, and independence levels; and a checklist that cross-references competencies to spaces provided for instructors to record information concerning whether students have attained a given educational objective as well as the student's frustration, instructional, and independence levels in attempting to accomplish the task. Descriptors—*Courseware, Educational Games, *Food, *Home Economics, Instructional Material Evaluation, *Nutrition, Secondary Education

Identifiers—*Courseware Evaluation, *Nutrients

This courseware evaluation rates the "Grab a Byte" program developed by the National Dairy Council. (The program–not included in this document–is divided into three sections: Grab-a-Grape uses a quiz-show format to examine students' knowledge of food groups; Nutrition Sleuth reinforces students' nutrient knowledge; and Have-a-Byte analyzes meals in terms of students' nutrient needs.) Part A describes "Grab a Byte" in terms of subjects (food and nutrition) and hardware requirements (Apple II and peripherals), indicates its suitability for 7th-10th grade individual or small group instruction, and lists accompanying materials (instructor and user guides, food list) and time estimate (25-40 minutes). Availability information includes cost ($30.00) and contact address. Part B contains the evaluation criteria in eight categories; reviewer ratings appear as yes, somewhat, no, and not applicable, with explanatory comments. Part C summarizes the evaluation. The strengths of this program are its interesting, easy-to-follow game format and topic. A weakness is that answers are provided too readily in the Nutrition Sleuth section. Summary ratings in the eight categories include the following: subject matter, technical presentation, student interaction, and program interaction–yes; documentation–somewhat; and student evaluation, work behaviors and application programs–not applicable. The final rating highly recommends this courseware as a fun way to learn sound nutrition information. (SK)

**Manpower and Educational Requirements for Computer Integrated Manufacturing Technicians in the Columbus, Indiana Region. Manpower Report 86-3.**

Purdue Univ., Lafayette, Ind. Office of Manpower Studies.

Pub Date—30 Apr 86

Note—36p.

Pub Type— Reports - Research (143)

**EDRS Price - MF01/PC02 Plus Postage.**

Descriptors—Adult Education, Career Education, *Computer Oriented Programs, Continuing Education, *Educational Needs, Employment Projections, Employment Qualifications, *Labor Needs, *Manufacturing Industry, *Production Technicians, *Technical Education

Identifiers—*Computer Assisted Manufacturing, Indiana (Columbus)

A labor force study ascertained the current and projected needs for the training of computer-integrated manufacturing (CIM) technicians and provided that information to administrators, faculty, and industrial advisors. Findings were that a decrease in the number of young people (24 years old and younger) was accompanied by a significant increase in the 35- to 49-year-old group. Educational attainments of adults were below state averages. A relatively substantial work force was employed in manufacturing industries, many where application of modern manufacturing methods are pertinent. Projections indicated a 30 percent growth for engineering technicians and technologists. The Indiana Commission for Higher Education favored expansion of needed programs in Southern Indiana and recognized the need for more technicians who can continue their studies to the baccalaureate level. A minimum annual recurring training requirement was calculated to be for 14 graduates as new labor force entrants into all types of manufacturing industries, plus related training needs for at least 15 adults now in the work force. Recommendations were for authorization to grant the CIM technology associate degree, adult continuing education and service courses to meet the CIM technology training needs, organization of an industrial advisory committee, and liaison with local high schools. **EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—Adult Education, *Adult Programs, *Aging (Individuals), *Educational Gerontology, Individual Characteristics, *Older Adults, Program Development, Teaching Methods

The aged are generally identified by such criteria as chronological age, economic condition, physical appearance, psychological behavior, mental conditions, and social roles. While the present population of aged is characterized by lower educational and economic levels, it is anticipated that as the number of aged grows, the educational and economic levels will increase. Most aged today are not poor, are in reasonable health, and live in urban areas. In terms of their mental abilities, researchers have found that crystalized intelligence remains constant, while fluid intelligence declines. One reason contributing toward the negative stereotype of the aged is the fact that most research has been focused on problems encountered by the aged. Education is one of the more positive aspects of aging. Recently, more attention has been given to educational gerontology. The focus of adult education is on problem finding and solving. Life problems found in later adulthood can provide topics that interest older adults and that they will probably seek in learning experiences. Recommended instructional techniques include ample mastery time, material repetition, positive reinforcement, short-term goal setting, and provision for learners with visual or auditory defects. Suggested types of discussion of reading materials are meta-cognitive, strategy, and postreading. (YLB)

This guide provides job relevant tasks, performance objectives, performance guides, resources, learning activitites, evaluation standards, and achievement testing in the occupation of environmental control system installer/servicer (residential air conditioning mechanic). It is designed to be used with any chosen teaching method. The course outline is divided into six duties: (1) brazing, cutting, fitting, soldering, and welding piping and tubing; (2) installing and servicing controls; (3) installing and servicing electrical circuits, components, and motors; (4) installing and servicing compressors, condensers, evaporators, and water towers; (5) installing and servicing refrigeration systems and domestic refrigerators; and (6) installing and servicing residential air conditioning and heating systems. A total of 154 performance objectives are categorized under these duties. The performance objective is defined in terms of task, conditions, standard, and source for standard. These components are provided for each performance objective: performance guide, enabling objectives(s), learning activities, resources, and evaluation (questions and answers). Appendixes include a cross-referenced table of duties, tasks, and performance objectives; tool and equipment list; sources of standards; state-of-the-art literature; a bibliography; and written evaluation questions and answers. Identifiers—Oregon

Data were collected from high school vocational education seniors and students enrolled in community college vocational programs for use as baseline for a longitudinal followup study over the next five years. Two Oregon high schools and three community colleges participated. Findings indicated over 70 percent of the high school seniors in college preparatory, vocational, and general education programs planned to be working full or part time one year after high school graduation. Over 70 percent planned to attend postsecondary education one year after graduation. Of the college preparatory students, 71 percent planned to attend a four-year college; 27 percent of vocational students and 5 percent of general curriculum students also planned to attend. Of vocational concentrators, 27 percent planned to take academic courses at a community college; the same percentage planned to take vocational courses. Vocational students at both levels rated the quality of instruction very high and career counseling relatively low. Community college students rated high school reading skills high in preparation for college work but rated mathematics much lower. Vocational students at community colleges gave high marks to college efforts to prepare them for needed technical skills, but rated much lower help in speaking skills. (Survey results are appended.) Identifiers—Courseware Evaluation, Kentucky

This document is a catalog of reviews of computer software suitable for use in vocational agriculture programs. The reviews were made by vocational agriculture teachers in Kentucky. The reviews cover software on the following topics: farm management, crop production, livestock production, horticulture, agricultural mechanics, general agriculture, leadership, safety, environmental education, and miscellaneous (word processing, filing systems, spreadsheets, and so forth). Each review is a one-page outline containing program name, vendor, purchase point, cost, coverage, difficulty, program description, suggested user level, suggestions for application or use, time required for teacher preparation and use, program requirements for use-equipment, books, materials-and reviewer comments. The final section of the catalog lists programs by subject area and provides vendor names and addresses for each one. (KC)

**Develop and Field Test Written and Performance Student Achievement Measures for Gardening-Groundskeeping and Landscape Operations. Final Report.**

Florida Univ., Gainesville. Dept. of Agricultural and Extension Education.

Spons Agency—Florida State Dept. of Education, Tallahassee. Div. of Vocational Education.

Pub Date—31 Aug 85

Grant—011-1515-5-1611

Note—518p.

Pub Type— Reports - Descriptive (141) — Tests/Questionnaires (160)

EDRS Price - MF02/PC21 Plus Postage.

Descriptors—*Competence, Competency Based Education, Criterion Referenced Tests, Field Tests, *Grounds Keepers, Job Analysis, *Landscaping, Postsecondary Education, Secondary Education, *Task Analysis, *Test Construction, Test Format, *Test Items, Vocational Education

Identifiers—Florida

A project was conducted in Florida between October 1, 1984, and August 31, 1985, to develop and field test criterion-referenced tests in the occupational areas of gardening/groundskeeping and landscape operations. The test instruments were constructed around the performance standards developed by the Florida Department of Vocational Education. These standards were first validated by incumbents in the field and a task analysis was constructed for all the standards verified. As a result of the project, two multiple-choice written tests of 193 questions each and performance standards to assess a student's competency in the occupational area of gardening-groundskeeping and landscape occupations and one test of 56 questions covering landscaping tasks not covered in the first two were constructed. The bulk of this document consists of appendices including the task list for gardening-groundskeeping and the two forms of the mastery tests for that occupation; a task list and mastery test for landscape operations and performance tests for six jobs that must be demonstrated; a description of the field test sites; item analyses tables; and task analyses for the gardening-groundskeeping and landscape operations occupations. (KC)

**Commercial Fishing.**

Florida State Dept. of Education, Tallahassee. Div. of Vocational Education.

Pub Date—86

Note—9p.

Pub Type— Guides - Non-Classroom (055)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Competence, Competency Based Education, *Course Content, Course Descriptions, *Maritime Education, Occupational Information, Postsecondary Education, Seafarers, Secondary Education, State Curriculum Guides, Student Organizations, Trade and Industrial Education

Identifiers—*Fishing, Fishing Industry, *Florida

This document is a curriculum framework for a program in commercial fishing to be taught in Florida secondary and postsecondary institutions. This outline covers the major concepts/content of the program, which is designed to prepare students for employment in occupations with titles such as net fishers, pot fishers, line fishers, shrimp boat deckhands; or to provide supplemental training for persons previously or currently employed in these occupations. The program outline also covers laboratory activities, student organizations, and cooperative education; and lists 14 intended outcomes for students completing the program, with student performance standards for each of the intended outcomes. Descriptors—Audiovisual Aids, *Auto Mechanics, Community Colleges, *Competence, Competency Based Education, *Course Content, *Diesel Engines, *Mechanics (Process), Motor Vehicles, Occupational Information, Postsecondary Education, Safety, Secondary Education, State Curriculum Guides, *State Standards, Student Organizations, Two Year Colleges, Vocational Education

Identifiers—*Florida, Vocational Industrial Clubs of America

This competency-based program guide provides course content information and procedures for secondary schools, postsecondary vocational schools, and community colleges in Florida that conduct programs in diesel engine mechanics and heavy duty truck and bus mechanics. The first section is on legal authority, which applies to all vocational education programs in Florida. The second section describes the content of the diesel engine and truck and bus mechanics program, including occupational descriptions, program standards descriptions, competencies, curriculum frameworks and student performance standards for each occupation. The third section, on Diesel Mechanics, covers instructional approach, course outline and sample lesson plan, and information on student organizations. In the fourth section, student admission requirements and teacher certification and qualifications are spelled out, while the fifth section provides information on facilities and supplies for the diesel engine and truck and bus mechanics curriculum. The final section lists instructor resources (both printed and audiovisual materials), and professional organizations and support services. Appendixes to the guide consist of a diagram of facilities needed for the program and an organization chart for the student organization, Vocational Industrial Clubs of America. (KC)

**Implementing Educational Change: A Qualitative Study of a Parenting Education Program.**

Pub Date—Nov 84

Note—19p.; Paper presented at the Annual Meeting of the American Anthropological Association/Council on Anthropology and Education (Denver, CO, November 14-18, 1984). Document contains some blurred type.

Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Advisory Committees, *Change Strategies, Decision Making, *Educational Change, *Educational Innovation, Ethnography, *Home Economics, Influences, Inservice Teacher Education, Naturalistic Observation, Organizational Change, *Organizational Climate, *Parenthood Education, Resources, School Community Relationship, School Organization, Secondary Education, Teacher Attitudes, Teacher Characteristics, Teacher Role, Teacher Workshops

A study examined the organizational factors inhibiting and facilitating implementation of an innovation in an educational setting. The innovative program selected as the subject of this ethnographic study was Georgia's parenting education program. Data were collected from field interviews of teachers, observations of parenting education classes, and analyses of various documents used in planning and implementing the parenthood education programs. The following eight education factors were found to influence the implementation of the innovations to which the parenthood education teachers were introduced in an inservice workshop: school structure, decision-making power, advisory committees, role of the workshop, resources, teacher commitment, and demands on teachers. The interaction of the innovation and the school setting resulted in an alteration of both. As individual teachers attempted

to implement the parenting class, they tested and sometimes modified existing policies and procedures; conversely, as the teachers experimented with ways of fitting the program into the existing school structure, the innovation itself was adapted to meet local needs. (MN)

Identifiers—ERIC Digests
Although volunteer tutors traditionally have formed the basis of the programs of Laubach Literacy Action and Literacy Volunteers of America, volunteers have begun to play a greater role in adult literacy instruction provided through community-based organizations, correctional institutions, churches, and federally funded adult basic education. Ilsley has identified five elements common to all literacy volunteer programs: purpose, scope, organizational control, professionalism, and finance. No single combination of these variables is appropriate for every station; instead, programs should be tailored to the needs of the group or community to be served. Likewise, selecting an appropriate administrative approach is important. Criteria for selecting volunteers, clarification of the assumptions about volunteers that are held by the organization developing the literacy program, and specification of the relationship between organizational setting and the establishment of a climate for volunteer participation are some of the many considerations that must be addressed. Administrators deciding to incorporate volunteers into adult literacy programs must also consider the myths, advantages, and disadvantages associated with literacy volunteerism. There is no shortage of resources available for those wishing to develop administrative guidelines and procedures for adult literacy volunteer programs, with as much as three-fourths of the literature base being devoted to administrative aspects of program development. Identifiers—ERIC Digests
Language problems are likely the strongest single barrier to success facing limited English proficient (LEP) immigrants to the United States. Therefore, instruction in English as a second language (ESL) for immigrants must be given a high priority. Vocational ESL (VESL) provides adult immigrants with English skills on an as-needed basis in cooperation with a program of vocational training. The ESL teacher and the vocational trainer coordinate their efforts, thereby allowing students to see the connection between their needs and their English lessons. Because cultural laws have not been codified and are not formally taught, cultural adjustment may be more difficult for many LEP immigrants than learning English. Activities that allow students to experience real-world situations in a nonthreatening environment are necessary to help LEP individuals build cultural self-confidence and adjust culturally. Techniques that have been found to be effective in VESL include introducing one concept at a time, using a slower pace in introducing information, using shorter lectures and more demonstrations, providing bilingual glossaries, explaining key concepts in the native language, using visual support materials, and modifying tests to evaluate mastery of content rather than English. The work experience and workplace training approaches are also effective in teaching employability skills. (MN)

A solid body of empirical research supports the view that educational level is strongly related to occupational attainment. In the final analysis, however, it appears that although education does lead to a better job, how much better is determined by one's gender and race. Research on the relative need for training in basic, general employability and transferable skills indicates that training in proper work habits, attitudes, and interpersonal skills is generally considered as important to job success as is training in the basic skills. At least one researcher has hypothesized that although the schools are teaching the transferable skills necessary for employment (mathematics, communication, interpersonal, reasoning, and manipulative skills), students are not being taught how to transfer these skills from school to work. Many young people and women entering or returning to the work force are not even aware of the transferability of their skills to the workplace. Most research indicates that the workplace remains the site of most learning concerning work. The current public education system must do more to show teachers how to teach transfer skills so that future workers will not see their skills as irrelevant, past accomplishments but will instead view them as tools for the future. Identifiers—ERIC Digests
Interactive video, a combination of computer-assisted instruction and video technology, is an important new development in instructional media. Because interactive video has its roots in individualized instruction, it is particulary useful in personalizing instruction by allowing students to proceed at their own pace (one of the tenets of programmed instruction) and to receive immediate feedback (an advantage made possible by the advent of computer-assisted instruction). Two main types of video technology are available: videotapes and videodiscs. Despite their higher cost, videodiscs overcome many of the drawbacks of videotapes, including slow access time, poor freeze-frame characteristics, and costly maintenance. Because video technology is fairly new, few programs are available. For this reason, teachers and trainers desiring to develop interactive video instructional materials will require training in the five-step process of instructional systems design (ISD): analysis, design, development, implementation, and evaluation. A research project conducted at the Ontario Institute for Studies in Education illustrated the successful use of ISD in developing interactive video materials to train machine lathe operators. Other examples of interactive video in training include those produced and used by General Motors, IBM, and the American Heart Association. (MN)

Identifiers—ERIC Digests
Recent changes in the family structure and in the work setting are forcing many families to reexamine and redefine the family-career relationship. Until recently, most research on career and family patterns has focused on traditional sex roles. Although competition between career and family roles has caused pain in many families, recent research addressing the nontraditional roles of men and women indicates that most women do derive a sense of personal accomplishment from work and that most fathers who are more actively involved in parenting report that they have a better relationship with their children because of this involvement. Persons in dual-career families need to recognize that planning for career roles and planning for family roles are closely related tasks. Career development programs are needed to help individuals develop career and family goals that are personally satisfying and mutually supportive of other family members. Such programs should focus on increasing awareness of current and future trends affecting the family-career connection, identifying and coping with family and career development stages that carry heavy role demands, addressing barriers to implementing family and career plans, and explaining the personal benefits of combining family and career. This instructional packet is one of a series of five modules that emphasize a systematic decision-making model for common problematic situations. The steps of the model are identifying the problem, gathering information, developing and assessing alternatives, implementing a solution, and evaluating and modifying the solution. Aimed at adult basic education (ABE) students, each packet contains the following sections: pretest; objectives; information for

the learner, with relevant exercises and worksheets, case studies that students can discuss together; and posttest. In addition, a form for students to evaluate the materials is provided. The packets were designed to be flexible, to stress problem-solving techniques that can be transferred to other situations, and to use community resources. Materials can be used on an individual or group basis, and usually can be used independently with evaluation and reinforcement provided by the teacher. This packet, on coping with a tight money situation, covers problems such as job loss, budgeting, saving money, finding temporary financial help, family relationships, and finding a new job. (KC)

Identifiers—Southern Association of Colleges and Schools

While attending the December 12, 1984, Commission on Occupational Education Institutions (COEI) Delegate Assembly of the Southern Association of Colleges and Schools, 79 school personnel responded to a questionnaire to determine their attitudes toward accreditation standards. Measured were the following: respondents' perceptions of the priorities for review/revision of COEI standards and the importance of the standards in relation to institutional quality and (2) any differences in their perceptions related to demographic variables describing the personnel. The study found three standards that should be given highest priority for review, and three standards that clearly ranked lowest in priority. This finding indicates that sufficient agreement exists among school representatives to use their perceptions as the basis for selecting clusters of standards for review and revision. Since only two or three standards can be addressed each year by the Committee on Standards, such information is important for the Committee. The study also found that the assignment of review priority ranks by school personnel is related to one demographic variable–type of school represented–and applies to less than half of the standards. The strategy used in this study offers a methodology that can be used by accreditation organizations to ascertain the perceptions of their clientele regarding evaluative standards and criteria. The results of such assessments can provide an objective basis for determining the sequence in which the review and revision of standards or criteria might be addressed. (KC)

Descriptors—Academic Deans, *Administrator Attitudes, Administrator Evaluation, Competency Based Teacher Education, *Educational Needs, *Management Development, Postsecondary Education, *Professional Development, Secondary Education, Staff Development, *Vocational Directors, Vocational Education

One hundred vocational administrators in Alabama responded to a questionnaire designed to determine the following: (1) the administrative tasks performed by secondary-level vocational education administrators; (2) the administrator tasks performed by deans of instruction in teachnical colleges; (3) the perceived competency level of administrators and deans to perform the task; and (4) the extent of general agreement among superintendents of education, secondary-level vocational administrators, and the program review reports with regard to the importance of competency areas and the related need for program improvement. The study found that the immediate professional development needs for secondary vocational administrators by task priority included developing a complete plan to promote vocational education, conducting program promotional activities, developing a community involvement plan, and ensuring continuing communication with the advisory council, while intermediate needs included identifying alternative funding sources, influencing traditional funding sources to benefit the program, using needed data to

identify the vocational programs and support services needed, and planning a staff development program. Immediate professional development needs for deans of instruction by task priority include operating an equipment preventive maintenance program and planning demonstration, pilot, and exemplary programs, while their intermediate needs include ensuring continuing communication with advisory councils, constructing a schedule conflict matrix, and organizing a student learning resource center. The data may be useful in determining content to be included in professional development activities for vocational administrators. Five tables present detailed analyses of the study data. An appendix provides a list of tasks by competency area. (KC)

This life skills curriculum for seventh and eighth grade is organized according to major concept areas. These concept areas are defined by concerns/specific needs of the students. Part I suggests a scope and sequence for five program options dependent on time spent in instruction. Part II discusses use of the concerns approach. Sample student and parent checklists to identify student needs/concerns are provided. Part III contains instructional strategies and materials. The nine major concepts of the curriculum begin with a "welcome" to home economics life skills and Future Homemakers of America/Home Economics Related Occupations (FHA/HERO), and continue as follows: making the most of one's resources, food and the individual, human development and relationships, caring for children, clothes and the individual, personal health, personal living space, and closing (review of material). Each concept is composed of one to six subconcepts. Within each major concept of the curriculum, the subconcept sections are organized as follows: teacher planning materials (objectives, concerns addressed, applications in mathematics and/or science, learning activities, additional resources) and student handouts and teacher reference materials. Part IV lists general references. Appendixes include concerns research data. (YLB)

Identifiers—*Health Maintenance Organizations

A study examined the effectiveness of the current inservice training process used to teach newly employed nurses at Bess Kaiser Medical Center to transfer nursing process theory to practice. Eighty-two of 102 recently hired registered nurses were included in the audit sample. The newly hired nurses, whose previous experience varied from less than 6 to more than 10 years of nursing experience, were required to take a 4-hour nursing process class that addressed 12 objectives, including clarifying the relationship between the nursing process and delivery of nursing care, distinguishing between a medical and nursing diagnosis, utilizing interviewing techniques, utilizing assessment information, reassessing patients, documenting the nursing process, and integrating the nursing process into the unit's delivery of health care. Pre- and posttests were administered to the nurses to assess the effectiveness of the nursing process workshop. Overall, the study supported the position that the educational process for nurses must include not only the theory of nursing practice, but also a practical method of applying the theory to practice. For example, when the charting behavior of the nurses who attended the workshop was compared with that examined in a previous study, the workshop appeared to have a positive effect. (MN)

**Competencies Developed in Industrial Arts That Are Relevant to Post-Secondary Programs.**

Pub Date—Dec 85

Note—31p.; Paper presented at the American Vocational Association Convention (Atlanta, GA, December 1985).

Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150)

**EDRS Price - MF01/PC02 Plus Postage.**

Descriptors—*Competence, Educational Research, High Schools, *Industrial Arts, National Surveys, *Skill Development, Teacher Educators, *Teaching Skills, *Transfer of Training, Vocational Directors

A study identified competencies high school industrial arts courses can develop that would be valuable to students who enroll in postsecondary programs. Its purpose was to develop a basis for recruiting students for high school industrial arts courses. Data were collected through a national survey of directors of one- and two-year postsecondary vocational programs, industrial arts teacher education programs, and industrial technology programs. The 10 most important competencies identified by the educators surveyed were problem-solving skills, effective work habits, responsibility, ability to work effectively with others, safe working procedures, interest in learning, self-confidence and self-esteem, ability to use mathematics and science to solve technical problems, oral and written communication skills, and role and impact of technology in the world. A number of skills unique to industrial arts courses were identified as important, including skill in using basic tools and machines, measurement, drafting, and processes skills. Industrial arts teacher educators also identified the most important teaching competencies that can be developed: desire to teach, ability to organize information and present it to others, concern for others, understanding of the teaching profession, and ability to demonstrate and teach skills to others. (The study instruments are appended.) (YLB)

Descriptors—*Career Counseling, Comparative Analysis, *Counseling Services, Educational Strategies, Education Work Relationship, Employment Patterns, *Job Placement, National Surveys, Outcomes of Education, Postsecondary Education, *Private Colleges, *Proprietary Schools, *Public Colleges, School Holding Power

A study compared public, private, and proprietary postsecondary institutions in terms of job placement activities and services for graduates and student retention. A 10-item questionnaire was mailed to 300 randomly selected colleges and universities from 4 geographical areas of the United States–Northeast, Midwest, South, and West. Data from the 160 usable responses indicated that the proprietary institutions were generally smaller and were more likely to offer only short-term, skill-intensive training programs. College-sponsored job interviews were the most beneficial form of job placement assistance provided. Graduates from proprietary institutions sought employment immediately following graduation at a significantly higher rate than did graduates from public and nonproprietary institutions. Graduates from proprietary institutions were most likely to gain employment and work in their selected career fields. Graduates from midwestern proprietary institutions gained employment in their selected career area at a rate of 93 percent compared with a rate of 53.46 for graduates from public institutions located in the South. Private and proprietary institutions were more likely to retain students until graduation, and graduates from proprietary institutions took an average of 4.61 weeks to find employment as opposed to 9.55 weeks from public and 11.21 weeks from private institutions. (A copy of the survey instrument is appended to this report.) (MN)

Descriptors—*Communication Skills, *Corporate Education, *Educational Needs, Industrial Training, Job Training, *Labor Needs, Retraining, Skill Development, *Technical Writing, Technological Advancement

The rapid technological advancement that U.S. society is experiencing has increased the likelihood that workers will have to be trained and retrained throughout their working lives to meet continually changing job requirements. This situation has challenged instructors of technical communication who are faced with the overlap of traditional education and corporate education in the area of basic skills. Although it is not fair to insist that the schools take the responsibility for dealing with all the educational needs of the business-industry-government complex, instructors of college technical communications courses must reassess their programs in light of what industry and society really need and want. After examining some 10 surveys of the rhetorical needs of writers in all types of jobs, one researcher has concluded that rather than emphasizing such specific writing assignments as composing proposals or taking minutes of meetings, the basic technical writing course should focus on (1) those common rhetorical principles that underlie the design and development of all writing; (2) ways of adapting any communication to varying audiences; and (3) assignments that emphasize an integrated approach to communication, including team reports. **Caffeine. Courseware Evaluation for Vocational and Technical Education.**

Ohio State Univ., Columbus. National Center for Research in Vocational Education.

Spons Agency—Office of Vocational and Adult Education (ED), Washington, DC.

Pub Date—9 May 86

Note—10p.; For a related document, see ED 244 058.

Pub Type— Reports - Evaluative (142)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—Adult Education, Allied Health Occupations Education, *Computer Assisted Instruction, *Courseware, *Food, *Home Economics, Instructional Material Evaluation, *Nutrition, Programed Tutoring, Secondary Education

Identifiers—*Caffeine, *Courseware Evaluation

This courseware evaluation rates the "Caffeine" program developed by Lane Community College and sold by the Oregon Department of Education. (The program–not included in this document–is part of a computer-assisted instruction project with nursing applications.) Part A describes "Caffeine" in terms of topics (food and nutrition, allied health) and hardware requirements (Apple II and peripherals), indicates its suitability as a tutorial for 11th-grade to adult instruction, and estimates time for use (20-30 minutes). Availability information includes cost ($5.00), policies, and contact address.

Part B contains the evaluation criteria in eight categories; reviewer ratings appear as yes, somewhat, no, and not applicable, with explanatory comments. Part C summarizes the evaluation. The strengths of this program are good graphics, concise presentation of information, and excellent reinforcement. Weaknesses include no printout capability, lack of documentation, and too long a list of objectives. Summary ratings in the eight categories include the following: subject matter, technical presentation, student interaction, and program interaction–yes; student evaluation and documentation–somewhat; work behaviors and application programs–not applicable. The program is recommended for individualized instruction in classrooms and informal settings such as doctors' offices. (SK)

Identifiers—310 Project, *New York

This manual is intended to assist practitioners working in adult career counseling programs in implementing and expanding services. The first section, which is directed toward program administrators, discusses establishing and managing a career counseling service for adults and includes a checklist for administrators. Discussed next are the philosophical perspectives of counseling adults in career transition, characteristics of adults in a career transition, effective individual and group counseling techniques, and group counseling leadership skills. Counselor qualifications, selection, and training and staff development are covered in the third section. The final section, which is devoted to planning and presenting a career seminar, provides a seminar overview, a discussion of seminar procedures and materials, outlines for seven career seminar sessions, and materials for use in individual counseling sessions. Each session outline contains some or all of the following: session goals, one or more learning activities (together with an explanation of the given activity and counselor instructions), a list of materials needed, one or more handouts, and instructional text. An extensive appendix to the manual contains assorted forms, a 22-page book list, assessment instruments, and student handouts for use in the career seminars. (MN)

Identifiers—*G I Bill, Military Enlistment, Military Recruitment, *Veterans Educational Assistance Program

This briefing report provides an evaluation of Department of Defense (DOD) plans to terminate the new GI Bill and revert to the Veterans Educational Assistance Program (VEAP). Comments are made regarding the positions of the Office of the Secretary of Defense (OSD) and the military service. These findings are summarized: estimated cost to transition back to VEAP would be $5.4 million, estimated program savings over fiscal years 1987 to 1991 would be $194 million, comparing the new GI Bill educational costs to VEAP costs will always show the former to be more costly, Army statistics show a marked recruiting improvement since the new GI Bill was started, military service program managers believe a return to VEAP could have a negative effect on the services' ability to attract quality recruits, and participation in the new GI Bill is considerably higher than the VEAP it replaced. Other contents of this report are a summary of transition costs, an estimate of the net savings in governmental outlays by terminating the new GI Bill, and information on recruiting and retention impacts of the new GI Bill and returning to VEAP. Identifiers—*Portland School District OR

This report describes current program offerings and activities in the areas of career, vocational, and technical education in the Portland Public Schools in Portland, Oregon, and assesses optional futures for program continuation and development. The information in the report is based on: student and faculty data, labor market trends, district organizational information, profiles of students and faculty within the district, and relationships with community colleges and neighboring school districts; summaries of more than 80 interviews with district and nondistrict staff covering the purposes, goals, and practices of vocational education; results of a detailed self-assessment process conducted by vocational instructors and advisory council members of cluster programs in the district; and profiles of both individual high school vocational programs and individual cluster programs throughout the district. The report's seven sections consist of an introduction, a descriptive report, interview findings, self-assessments, high school profiles, cluster profiles, and future directions. Appendixes to this guide include a list of persons interviewed, current program descriptions, composite list of vocational education interview questions, list of career interest areas, vocational faculty survey, evaluation survey of the self-assessment process, labor market information, Portland Community College vocational program offerings, references, ratings of alternative directions for vocational education, sounding board findings, list of members of the study steering committee, and student enrollment data for vocational education programs in 1986. This report suggests feasible alternatives to the present methods of calculating benefits and costs of the joint federal-state vocational rehabilitation program. "Summary and Guide to Reading This Report" (Monroe Berkowitz) appears first. Part I, Background, Theory and Models, includes "The Cost Benefit Tradition in Vocational Rehabilitation" (Edward Berkowitz), "Welfare Measurement for Benefit Cost Analysis" (Douglas Blair and William Milberg), "Benefit Cost Models" (Jack Worrall), and "Models Based on Individual Behavior" (Duncan Mann). Part II, Benefit Cost Analysis using R-300 Data, contains "The R-300 Data Set" (Ernest Gibbs and Anita Hall-Kane), "Simple Benefit Cost Ratios" (Ernest Gibbs), "Benefit Cost Ratios using Multivariate Analysis" (Ernest Gibbs), "Correcting for Zero Wages at Referral" (Anita Hall-Kane), and "Inputting Benefits to Persons Closed Not Rehabilitated" (David Dean and Robert Dolan). In Part III, Activity at the State Level, the chapters are "Benefit Cost Analyses Conducted by State Agencies" (Frederick Collignon) and "Collection of Data by State Agencies" (Stanley Portny). Part IV, Using Augmented Data Bases, includes "Using a Better Measure for Services" (David Dean and Robert Dolan), "Using Better Measures of Disability Status" (David Dean and William Milberg), "A Mini-Data Link" (David Dean and Robert Dolan), and a conclusion by Monroe Berkowitz. Identifiers—*Employee Participation, High School and Beyond (NCES)

Correlates of employer-provided training while in the most recent full-time job held were explored. Respondents were nearly 10,000 members of the 1980 high school seniors cohort of the High School and Beyond survey data set. Two types of forces expected to influence participation in employer-provided training were distinguished: incentive and opportunity. Five types of factors were components of these incentive and opportunity sets: education and work experience, personal and household characteristics, personal attitudes, location, and industry/occupational affiliation. Findings indicated 40 percent of the respondents had participated in some type of employer-provided training. No important difference in the overall participation patterns in training appeared between females and males. Females spent 52 percent as many hours and 68 percent as many weeks in training compared to males. Conclusions were that different factors affect the incentives and opportunities upon which females and males acted, education and work experience appear to be more consistent correlates of female participation in training, the industry and occupational affiliation factors appear to dominate as correlates of participation in training, and employers offer training support as a substitute for alternative external sources of work skills enhancement. Descriptors—Comparative Analysis, Cooperative Education, Educational Benefits, Educational Experience, Educational Trends, *Education Work Relationship, Employment Patterns, High Schools, *Institutional Characteristics, Longitudinal Studies, *Student Characteristics, *Success, *Trend Analysis, *Vocational Education, Work Experience

The high school/student qualities that lead to a more successful school-to-work transition were investigated. The project identified features of the high school experience correlated with initial labor market success/failure of young workers and determined if the conditions of a successful transition have changed in the last decade. Data for the high school senior class of 1980 from the High School and Beyond Survey were compared to a sample from the National Longitudinal Survey of the High School Class of 1972. No clear evidence was found that the high school academic experience has led to the decline in labor market experience. For males, high school vocational programs improved dramatically between 1972 and 1980. Conversely, the cooperative vocational programs successful for the class of 1972 no longer functioned well by 1980. Only weak evidence supported the notion that better disciplined study habits improved labor market outcomes. Hours spent on a job during the senior year were very important for early work experiences of youth. However, a better academic record was generally rewarded in the labor market. A greater emphasis on academic credit hours consistently was related negatively to wage rates, employment, and earnings. Vocational courses had a positive payoff. (Eleven tables are appended.) (YLB)

Identifiers—Ohio, *Ohio Vocational Achievement Tests, *Science Achievement

A project examined the mathematics and science performance of vocational students in Ohio. Part I of the study achieved the first objective–to report the science and mathematics content contained within the Ohio Vocational Achievement Tests for the 38 program areas. Each of the 38 tests was presented and found to have sound psychometric properties. In general, each test contained reasonable numbers of science and mathematics items. Part II achieved the second and third objectives–to determine the level of functioning and the proportion of correctly answered questions by juniors and seniors enrolled in vocational education programs in the areas of science and mathematics in each program area. In general, seniors outperformed juniors in each program area; the level of performance was at a reasonable level. Performance across the 38 levels on both science and mathematics varied among the different vocational groups. Part III achieved the fourth objective–a pilot study to determine the feasibility of experimentally comparing students enrolled in vocational education programs with students enrolled in traditional education programs on common paper and pencil indicators of science and mathematics performance. Performance of students in three vocational education programs compared favorably with students in college preparatory and general academic programs. (YLB)

Descriptors—Accountability, *Adult Basic Education, Adult Learning, *Adult Literacy, *Adult Reading Programs, Budgeting, Community Involvement, Community Programs, Delivery Systems, Financial Support, Guidelines, Legal Responsibility, *Literacy Education, Needs Assessment, Personnel Evaluation, Personnel Needs, Program Administration, *Program Development, Program Evaluation, Recordkeeping, Recruitment, Staff Development, Staff Utilization, Student Evaluation, Student Participation, *Volunteers

This guide is intended to assist individuals involved in the development, administration, and delivery of volunteer-based community adult literacy programs. Addressed in the individual sections of the guide are the following topics: community (community assessment, learner population, program purposes, public awareness, and partnerships and networking); adult learners (recruitment, initial interviews and assessment, use of assessment data, and linking adult learners to additional resources); staff resources (determination of staffing needs, staff recruitment, staff development and evaluation); instruction and support (instructional strategies and materials, adult learner support, and quality assurance); governance (accountability, legal issues, planning, and role of adult learners and staff); management (staff, financial, office, and records management and reporting); and evaluation (program and student evaluation). Appendixes to the guide contain checklists providing guidelines for collection and maintaining descriptive and performance data as well as a list of resources dealing with adult literacy and literacy programs. Descriptors—Adult Education, Case Studies, *Cooperative Planning, Coordination, Educational Administration, Educational Legislation, Educational Planning, Educational Policy, *Federal Legislation, Federal State Relationship, *Financial Support, *Job Training, Models, Policy Formation, Postsecondary Education, *School Business Relationship, *Statewide Planning, Technical Assistance, Vocational Education

Identifiers—Alaska, Colorado, Florida, *Job Training Partnership Act 1982, New Hampshire, Ohio, Texas, Washington

A study examined the ways in which practitioners in four states were defining the terms coordination/-cooperation/collaboration when directing the monies set aside in Job Training Partnership Act (JTPA) funding for use in coordination among educators and job training providers. Case studies of the use of 8 percent set-aside monies were conducted in Colorado, New Hampshire, Ohio, and Texas, and practitioners working with JTPA programs in Alaska, Florida, and Washington were contacted. Attempts at cooperation were being made; however, terminology should be clarified to help practitioners understand what is expected of them. Technical assistance between levels of government is necessary to provide effective policy transmission. When this technical assistance is provided, a delicate balance must be maintained between respect for a state's unique system of problem solving and the general values and goals created by Federal legislation. A circular model representing collaboration, cooperation, and coordination as concentric circles lying progressively closer to the central core of program outcomes was developed during the study. (Appendixes to this report include cross-references in the Carl D. Perkins Vocational Education Act and JTPA, a flowchart illustrating state levels of vocational education administration, sample questions asked during the study, information sources on the JTPA 8 percent set-aside, and five pages of references and suggested readings.) Descriptors—*Allied Health Occupations Education, Behavioral Objectives, Biomedical Equipment, Correspondence Study, Distance Education, *Laboratory Procedures, *Laboratory Technology, Learning Activities, *Medical Evaluation, Medical Services, *Medical Technologists, Military Personnel, *Military Training, Postsecondary Education

Identifiers—Air Force, Blood Transfusion, *Hematology, Immunology, Serology

This three-volume student text is designed for use by Air Force personnel enrolled in a self-study extension course for medical laboratory technicians. Covered in the individual volumes are hematology (the physiology of blood, complete blood counts and related studies, erythrocyte studies, leukocyte and thrombocyte maturation, and blood coagulation studies); laboratory procedures in blood banking and immunohematology (immunohematology, blood group systems, transfusion and transfusion practices, and the blood donor center); and serology (principles of immunology and serology; agglutination tests; latex-fixation, precipitin, and ASO tests; and serological tests for syphilis). Each volume in the set contains a series of lessons, exercises at the end of each lesson, a bibliography, and answers to the exercises. Supplementary volume review exercises and a change supplement are also provided. (MN)

Descriptors—Elementary Secondary Education, Equipment, Guidelines, *Leadership Training, *Parliamentary Procedures, Postsecondary Education, *Student Organizations, Teacher Education
Identifiers—*Ceremonies
This document provides instructions for conducting an installation ceremony for a student organization. The ceremony may be used as a sample in an inservice workshop for teachers and prospective teachers as well as in leadership training workshops for youth or teacher education programs. The instructions contain a list of suggested symbols and materials that may be included: the American flag, state flag, organization emblem, gavel, Robert's Rules of Order, ribbons, candles, and pins for officers. In addition, a sample installation procedure is explained. This sample installation ceremony was written to provide a typical ceremony that could be used with only a few specific terms inserted which apply to a particular organization or may be used as a guideline for an organization to write its own ceremony. Identifiers—310 Project, *Software Evaluation
This buyer's guide is based upon more than 300 software reviews made by members of an educational consortium in Oregon, all of whom work with adult students. The guide represents the recommendations for a core program in adult basic education and is split into two parts: (1) an initial kit, which is designed for those who are just beginning to set up a computer-assisted instructional program and who have only a limited amount of funds; and (2) an advanced kit, which recommends more programs, including management systems that are more expensive. All the programs are being used currently in adult basic education, general educational development, and developmental education programs in the Northwest. The software catalog contains a curriculum guide, the listing of the software programs with annotations, price guidelines, and publishers' addresses. Curriculum areas covered by the programs listed include the following: computer literacy, English/grammar and usage, English/composition, mathematics, problem solving, reading, science, social science, spelling, teacher aids, vocabulary, and word processors. A sample blank rating form that the reviewers used to rate the software programs is included in the book. All programs reviewed are available for Apple Computers. (KC)

Identifiers—310 Project
This guide was developed to assist adult education program directors and staff to integrate technology into their programs. Adapted from the original guidebook developed by the Merrimack Education Center's Adult Education Computer Applications Project, it focuses on major considerations in matching computer applications with instructional program goals. The guide is organized according to the four major steps in the process: (1) preliminary planning activities; (2) planning computer applications with an emphasis on selecting software for the instructional process; (3) hardware (equipment) considerations; and (4) planning for implementation. Appendixes to the guide contain a list of resources, a list of software especially useful for adult education applications, a software evaluation form, a software review guide order blank, and a bibliography. The guidebook can be used as a stand-alone manual or as part of a staff development program. (KC)

Identifiers—310 Project, *Courseware Evaluation
This directory contains 111 reviews of computer software programs suitable for use in adult basic education, general educational development, and English as a second language (ESL) programs. Each one-page review contains the following information: program title, version, producer, cost, hardware requirements, typical run time, back-up disk, appropriate uses, specific subject/akill area, instructional mode, description, and rating of program quality, recommendation, and comments. Programs were reviewed by one to three reviewers. Curriculum areas covered by the software reviews are computer literacy, ESL, language arts, life skills, mathematics, reading, science, and social studies. A section of programs for the teacher is also reviewed. The final section of the guide contains a list of the most useful programs for adult education. (KC)

Student Evaluation, Vocational Education

This teacher handbook provides recommended goals and objectives and suggested measures for competency-based courses in the vocational program area of marketing education. A background and overview section contains the philosophy and rationale, discusses thinking skills and programs for exceptional children, and provides notes that explain how to read the goals, objectives, and measures and offer suggestions for student placement, textbook use, and activities. This specific information is then provided for a vocational education competency-based curriculum: purpose and overview (target groups, philosophy, curriculum planning and design) and course of study. For marketing education, grades 9-12, are offered a program description, learning outcomes, and scope and sequence. These topics are included in the curriculum: advertising and sales promotion, fashion merchandising, marketing and merchandising, ownership, management, and sales. Materials provided for each subject include a topical outline and a one-page format for each competency goal that details grade level, skills/subject area, the competency goal, objective(s), and measure(s) (suggestions of ways in which students may demonstrate their ability to meet the objective). This teacher handbook provides recommended goals and objectives and suggested measures for competency-based courses in the vocational program area of prevocational education. A background and overview section contains the philosophy and rationale, discusses thinking skills and programs for exceptional children, and provides notes that explain how to read the goals, objectives, and measures and offer suggestions for student placement, textbook use, and activities. This specific information is then provided for a vocational education competency-based curriculum: purpose and overview (target groups, philosophy, curriculum planning and design) and course of study. For prevocational education are offered a program description, learning outcomes, and scope and sequence. In addition to the prevocational education course options for grades 7-9, the curriculum includes a prevocational education/pre-employability skills course. Materials provided for each course include a topical outline and a one-page format for each competency goal that details grade level, skills/subject area, the competency goal, objective(s), and measure(s) (suggestions of ways in which students may demonstrate their ability to meet the objective). Descriptors—Adult Education, Adults, Career Education, Computer Literacy, *Computers, Computer Science Education, *Dislocated Workers, *Educational Change, Education Work Relationship, Employment Qualifications, *Job Skills, *Job Training, Position Papers, Postsecondary Education, Reduction in Force, Retraining, Role of Education, Secondary Education, *Technological Advancement
This policy statement and report on computers and jobs examines some of the changes that are affecting jobs and the preparation of both young people and adults for those jobs. The policy statement addresses these selected issues: preparation of firms and new and experienced workers for the introduction of computers into the workplace, the role of schools and training institutions, and information needs to aid policymaking. Findings are that existing strategies for adopting computers are appropriate for handling human resource adjustments; careful planning is the key to effective integration; good basic skills continue to be critical; computer skills are an addition to, not a replacement for, other job skills; and education and training institutions should make changes in course offerings and procedures. The staff report that comprises most of this document assesses some employment consequences of the "computer revolution." Topics include the spread of computers, computers' effects on jobs, the role of human resource decisions, job loss and worker displacement, current estimates and projections of displaced workers, the amount of computer training workers need, and the role of educational institutions. Listings of reports and publications of the National Commission for Employment Policy are attached. (YLB)

**Older Workers: Prospects, Problems and Policies. 9th Annual Report. Report No. 17.**
National Commission for Employment Policy (DOL), Washington, D.C.
Pub Date—85
Note—76p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC04 Plus Postage.**
Descriptors—*Age Discrimination, Aging (Individuals), Career Education, Dislocated Workers, Employment Opportunities, Employment Patterns, *Employment Practices, *Employment Problems, Employment Programs, Equal Opportunities (Jobs), Federal Programs, Income, Job Training, *Older Adults, *Personnel Policy, *Retirement, Unemployment
Part A of this report examines the causes of the labor market problems of older workers and the policies that could alleviate these problems. Chapter I presents an overview of the report, including a summary of findings and conclusions and recommendations for improving the employment conditions of older workers. Chapter II describes the general population and labor force trends over the last several decades and those projected for the future. Chapter III examines older workers' employment, unemployment, earnings, and income. It describes the extent and causes of the employment problems of older workers. Chapter IV discusses employer programs and practices and government programs designed to redress the employment problems of older Americans and to provide increased employment opportunities for these individuals. Chapter V describes the relationship of retirement decisions to various public and private policies. Chapter VI presents the major conclusions of the study. The report explains that for all older workers, decisions concerning training, employment, and retirement are interconnected; these interconnections are important because policies affecting any one of them have implications for the others. Part B briefly describes completed and ongoing projects, organized according to four National Commission for Employment Policy work groups: Programs and Policies Project, National Employment Policy and Older Americans Project, Changes in the Workplace Project, and Special Projects. Descriptors—Educational Development, Educational Research, Females, Foreign Countries, *Physics, *Science Curriculum, Sciences, Science Teachers, Secondary Education, Student Attitudes, Teacher Attitudes, Teacher Education, *Technical Education, *Technology
Identifiers—*Netherlands
For three reasons it is important to pay attention to the aspect of technology in the physics curriculum. First, physics and technology are closely related. Second, elements of technology in the physics curriculum can contribute to the process of career choice by pupils at general secondary schools when they think of going to a technical school later on. Third, starting from the physics curriculum, contributions can be made to the new, separate subject of technology. Two projects in the Education of Physics section of the Physics Faculty of the Eindhoven University of Technology address the relationship between physics and technology. The project Physics and Technology is considering elements of technology in the physics curriculum. Present activities concentrate on (1) what is technology and what is meant by technology in the physics curriculum, (2) what is the attitude of pupils and physics teachers toward technology, and (3) construction and evaluation of courses on physics and technology. The MENT (Meisjes en Natuurkunde en Techniek-Girls and Science and Technology) project is contributing to the position of girls in physics and technology education. The Education of Physics section has two tasks: physics teacher training and research in the field of physics education. (YLB)

**Operation Alumni: Finding Them, Organizing Them, Making the PAACE Connection.**
Reading Area Community Coll., Pa.
Spons Agency—Pennsylvania State Dept. of Education, Harrisburg. Div. of Adult Basic Education.
Pub Date—86
Note—25p.
Pub Type— Guides - General (050)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Adult Basic Education, Adult Programs, Alumni, *Alumni Associations, Guides, *High School Equivalency Programs, Models, *Program Development
Identifiers—310 Project, *General Educational Development Tests
This booklet is both a description of activities to organize a General Educational Development program (GED) alumni association and a guide to starting an alumni group. It specifically focuses on "Operation Alumni," a project to establish a local GED alumni organization at Reading Area Community College that could serve as a state model for other GED programs. These steps in organizing the alumni association are described: getting started, contacting potential members, the first meeting, brainstorming regarding possible reasons for success and failure and analyzing the brainstorming, the big mailing, keeping records, and developing a structure to meet alumni needs. These roles assumed by the

GED alumni organization are then discussed: supporting graduates as they pursue further education or seek a new job, assisting future GED students, planning social activities drawing new members, raising and organizing money, and publicizing through production of a newsletter. Following a summary of the project, descriptions are provided of three other 310 projects in Pennsylvania that also dealt with alumni associations. A final section provides annotations of available resources on developing an adult basic education/GED alumni association and a list of contacts for existing GED alumni associations. (YLB)

**EDRS Price - MF01/PC08 Plus Postage.**

Descriptors—*Adult Basic Education, Adult Programs, Adult Students, Check Lists, *Computer Assisted Instruction, Computer Literacy, Computer Managed Instruction, *Computer Oriented Programs, *Computer Software, Daily Living Skills, *Evaluation Methods, Guidelines, *High School Equivalency Programs, Language Arts, Mathematics Instruction, Microcomputers, Problem Solving, Science Instruction, Social Sciences, Vocabulary, Word Processing

Identifiers—310 Project, PLATO

This document is a guide to an annotated bibliography of software for use with microcompuers in adult basic education (ABE) classes. Some materials also are suitable for use in General Educational Development (GED) classes. The directory contains software reviews in the following categories: tools (such as word processing, spreadsheets), computer literacy, language arts, life skills, mathematics, miscellaneous educational areas, problem solving, science, and social studies. Each review contains title, date, version, vendor, subject area, level, program type, price, computer needed, auxiliary equipment needed, availability of instructional manual, appropriateness for ABE and/or GED, recommendation for use, and comment. The document also contains guidelines for choosing hardware and educational software, and a description of the PLATO and PLATO/WISCAT systems. Appendixes include a bibliography, a software evaluation checklist, and a glossary. Software is indexed by title, by publisher, and by type. (KC)

**Congruence, Locus of Control, and Readings of English College Students-An Application of John Holland's Theory of Vocational Choice.**

Pub Date—Feb 85

Note—12p.; Paper presented at the Annual Meeting of the Eastern Educational Research Association (8th, Virginia Beach, VA, February 7-9, 1985).

Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—*Career Choice, *Congruence (Psychology), Higher Education, *Locus of Control, *Majors (Students), Occupational Aspiration, Predictive Measurement, Testing Problems, Test Reliability, Test Validity, *Undergraduate Students

Identifiers—*England, *Hollands Theory of Occupational Choice, Holland Vocational Preference Inventory

One hundred and five English undergraduate college students at two colleges in England completed the Holland Vocational Preference Inventory (VPI), the Barron Ego Strength Scale, the Adult Nowicki-Strickland Internal-External Control Scale, and the Occupational Values Q Sort. Congruent students were identified by matching their reading (major) with their scores on the six Holland type indicators. A multivariate analysis of variance (MANOVA) revealed that congruent subjects exhibited a higher level of internality, greater ego strength, and less affiliation than incongruent subjects. Results support Holland's theory that subjects whose personality types and interests match their occupational goals tend to have more ego strength and internal locus of control and subsequently to find more job satisfaction than those who lack this congruency. A question that was explored was the practicality of applying American measurement techniques to an undergraduate English college population. In this sample, the measures seemed to work and to satisfy the students. (Author/KC)

Descriptors—*Career Choice, *Career Counseling, Counseling Techniques, Counselor Role, *Experience, *Interest Inventories, Interest Research, Occupational Information, Postsecondary Education, Predictive Measurement, *Predictive Validity, Secondary Education, *Test Interpretation, Test Validity

This study determined the validity of vocational interest scores for persons with high, medium, and low levels of experience appropriate to their predominant interests. The experiences and interests of a national sample of 1,380 young adults were assessed concurrently with scales paralleling Holland's types. The degree of congruence between inventoried interests and occupation pursued six years later was found to increase as interest-appropriate experience increased. Occupational group members who had a high level of interest-appropriate experience (i.e., those with "verified interests") scored as expected on the interest inventory–in sharp contrast to those with a low level of interest-appropriate experience. Implications for counseling include the following: (1) when a counselee's predominant interests are not accompanied by relevant experiences, caution should be used in interest score interpretation; (2) the counselor and counselee may wish to review the extent to which experience and knowledge were brought to bear on responses to items on the interest scales with the highest scores; and (3) another approach would be to provide counselees with opportunities to engage in and evaluate the experiences they are lacking–and thereby evaluate their interests. Descriptors—Agribusiness, *Agricultural Education, Community Colleges, Computer Assisted Instruction, *Curriculum Development, Demography, Educational Needs, *Educational Research, Farm Management, Needs Assessment, Outcomes of Education, Postsecondary Education, Program Descriptions, Program Effectiveness, Program Improvement, Public Relations, *Research and Development, Research Projects, Secondary Education, Student Characteristics, Student Organizations, Student Recruitment, *Vocational Education

This document is the 11th annual summary of research and development projects in agricultural education. Included in the collection of 170 abstracts are 90 abstracts of master's papers or theses, 42 abstracts of doctoral dissertations, and 38 abstracts of funded or nonfunded staff studies. Research and development projects conducted at 30 institutions from 25 States are described. Abstracts are alphabetized by State, with each abstract including the name(s) and affiliation of the project's author(s) and a project summary. Also provided are a list of research and development activities in progress, ERIC accession numbers for previous regional summaries (1968-1974) and national summaries (1974-1984), a list of previous national editors, and author and subject indexes. Included among those topics addressed in the individual research and development efforts are the following: advisory councils, agribusiness, agricultural mechanics, attitudes, communication, community colleges, competency-based education, computers, continuing educational needs, cooperative vocational education, curriculum, educational opportunities, employer views, employment, entry-year assistance programs, farm management, 4-H, Future Farmers of America, horticulture, inservice programs, international programs, maternal employment, occupational status, orientation, public relations, recordkeeping, recruitment, safety, special needs, student characteristics, student teaching, summer programs, supervision, teacher characteristics, teacher education, and technical studies. Descriptors—Blindness, Comparative Analysis, *Fees, *Financial Policy, National Surveys, *Private Agencies, *Public Agencies, Services, *State Agencies, *Vocational Rehabilitation

A study examined current practices in purchasing nonmedical, vocational rehabilitation (VR) services from public and private VR facilities. Questionnaires were mailed to the 83 State VR agencies. The majority of the 57 respondents used the individual authorization without a contract or written agreement as a primary method of obtaining facility-based services. Most of these agencies offered no assurance with this type of method. Most State agencies indicated satisfaction with the type of service arrangements being used. The most popular method of determining a rate for services involved a facility-specific rate. Purchasing a unit of time was the most popular way of quantifying services purchased. Most agencies allowed facilities to renegotiate costs associated with providing a service to the State agency after the terms of the service arrangement were agreed upon. Half the general agencies felt that a uniform nationwide system to determine costs associated with facility-based services should be established, whereas most of the agencies serving blind clients did not see a need for such a policy. (Appendixes to this report include the survey form, the survey followup letter, additional descriptive statistics, VR case status definitions, State agencies responding to the study, and a table summarizing sources of data for selected survey items.) Descriptors—Attitude Change, Business Responsibility, *Educational Cooperation, Education Work Relationship, Elementary Secondary Education, *Employer Attitudes, *Motivation, *Outreach Programs, *Program Effectiveness, *School Business Relationship

Although there is widespread publicity about the involvement of businesses with schools, and as President Reagan as well as authors of reform reports continue to call upon the private sector to help education, it is unclear to what extent such relationships exist and what they are accomplishing. A 10-page, 55-question survey was mailed to the chief executive officers of a sample of 500 corporations on the Forbes 500 list, with a 69 percent return (345 usable responses). The questionnaire was intended to identify what kinds of corporations would be more likely to participate in collaborative efforts with schools, who initiates the collaboration, the kinds of partnerships, the motivations of the corporations to participate, and benefits of the partnership. Analysis of survey responses showed that 73 percent of corporations work with schools, a majority with Adopt-A-School programs. Banks, utility companies, and insurance companies are the most likely corporate participants, although many other industries also participate. Most of the relationships consist of sending speakers, giving tours, and donating equipment. Motivations of the corporations to participate in school affairs include improving student academic achievement, improving career education, providing business role models for students, and promoting a favorable business image in the community. The study also found that having a relationship with schools improves the schools' image in the corporate mind. The study concluded, however, that business participation in schools is minimal, sporadic, and has a small effect on education. (KC)

This study was conducted to investigate the attitudinal effects of presenting students with career information in two media forms, slide/tape and print. Subjects were 186 ninth-grade students from a junior high school in a lower-middle-class metropolitan area. Interviews with role models working in careers not traditional for their gender were used as a means of presenting the career information in both the slide/tape and print treatment groups. Students in a control group received no career information. All students completed an occupational survey to assess their attitudes about the suitability of eight jobs for both men and women and their own interest in and confidence of success in the jobs. The data were analyzed using three separate multivariate analyses of variance. Students in both the slide/tape and print treatments were significantly more positive about the careers being suitable for both men and women than were students in the control group. Subjects also showed more positive attitudes toward jobs they learned about than jobs they did not learn about. Attitudes of students in the print group did not differ significantly from those in the slide/tape group. Students were significantly more interested in and confident of success in jobs traditionally for their own gender, and neither presentation had a significant effect on interest and confidence. Although both types of presentations produced positive changes in attitudes towards suitability of careers for both men and women, more comprehensive programs appear necessary to increase the probability of changes in interest and confidence of success in nontraditional careers. (Author/KC)

This guide is intended to assist employers, educators, and union officials in understanding the rationale behind developing and implementing tuition assistance plans. Examined in the introductory section are the importance of tuition assistance programs in light of contemporary economic and labor market conditions. The first chapter outlines the past, present, and future directions of tuition assistance programs. Described next are the basics of tuition assistance. The third section contains tuition assistance program check lists for use by employers, education institutions, and labor unions. Problems in establishing and implementing tuition assistance programs and suggested solutions are covered next. The fifth section deals with taxes, policies, and tuition assistance. Community tuition assistance networks are the subject of the final section. (Appendixes to this guide include tables presenting industries paying employee educational assistance in 1982 and the percent of companies paying employee educational assistance benefits in selected years, a draft model statement on tuition aid, and a model tuition plan. A list of additional publications on tuition aid is also provided.) (MN)

More than 7 million workers in the United States today use computer-based video display terminals to do word and data processing; an overwhelming number of these workers are women. Women make up most of the occupational groups identified as "administrative support," and they are particularly affected by the changes taking place in the workplace. The impact of new office technologies on clerical work is a subject of great concern to the Women's Bureau of the U.S. Department of Labor. This concern extends to a wide variety of issues posed by the electronic office, including the following: (1) quality and content of the new jobs; (2) wages and status; (3) opportunities for mobility; (4) training and retraining; (5) health and safety factors; (6) equal opportunity aspects; (7) electronic "telework" and remote office work; and (8) the quantity of jobs or clerical employment prospects. Current research suggests that clerical workers often are excluded from the planning and implementation decisions leading to technological change. Although office automation promises greater efficiency and productivity, decision makers should remember that these outcomes are not independent of the people who operate the new equipment. (KC)

Descriptors—*Adult Education, *Adult Students, *Community Coordination, Community Organizations, Cooperative Planning, Cooperative Programs, Coordination, Economic Development, Educational Cooperation, *Information Networks, *Linking Agents, Older Adults, Postsecondary Education, Retirement, *School Business Relationship, Student Financial Aid, Tuition Grants

The Adult Learner Project was a two-phase program in which a total of 10 community-level projects received funding to develop collaborative agendas that would meet the learning needs of adults in their respective communities. During the second phase of the project, the following community-level collaborative councils were also given $20,000 each: the Arizona Business-Industry-Education Council, serving the greater Phoenix area; the Career Development Council, serving the tri-county rural-industrial area around Corning and Elmira, New York; the Industry-Education Council of Contra Costa County, serving an area east of San Francisco Bay; San Mateo County Industry Education Council, serving the area surrounding San Francisco International Airport; and the Metropolitan Washington Work-Education Council, serving jurisdictions in Maryland, Virginia, and the District of Columbia. This time, however, grant recipients concentrated on the following areas: expanding adult learning through employment-based tuition aid programs, meeting learning needs of older and retired workers, and improving linkages between vocational-technical programs and economic development efforts. The projects demonstrated that most communities are rich in resources and opportunities to address adult learner issues and that these resources can be linked and tapped. Although communities tend to profess commitments to adult learner issues and support educational institutions, they tend to undervalue neutral third-party efforts to create institutional linkages. Descriptors—*Access to Education, *Adult Education, *Career Change, Demography, *Educational Opportunities, Educational Trends, *Enrollment Trends, Needs Assessment, Participation, Postsecondary Education, Program Effectiveness, Program Improvement, Research Needs, Retraining, School Effectiveness, Student Needs, Training, *Transitional Programs, Trend Analysis

More than 2 million adults participate in programs provided by elementary and secondary schools, almost 8.5 million adults receive training from postsecondary schools, nearly 4.5 million participate in private employer-provided programs, and government agencies account for almost 4.5 million adult participants. Demographic data suggest that young, white, well-educated, higher-income, higher-occupational-status, employed adults have the highest participation rates. Reasons for nonparticipation are related to socioeconomic status, race, and prior educational attainments. Examination of training programs that have been successful in removing many of the barriers to participation in training, especially for adults in a career transition, indicate that successful programs are likely to involve collaboration or partnership among business, education, organized labor, and community agencies; offer flexible curricula and scheduling; offer supportive services; combine modes of instruction; offer remedial instruction; encourage peer support groups; gear programs to the wants and needs of those being served; and provide training for emerging, high-demand jobs or careers. A single, longitudinal database is needed to provide information on patterns, reasons for, and barriers to participation in education and training. Also needed are alternative methods of data collection to improve assessment of the sociopsychological, situational, and structural barriers to participation in adult education and a research agenda providing for hard evaluation of program outcomes. (MN)

Identifiers—*Fast Foods

A study examined employment in the fast-food industry. The national survey collected data from employees at 279 fast-food restaurants from seven companies. Female employees outnumbered males by two to one. The ages of those fast-food employees in the survey sample ranged from 14 to 71, with fully 70 percent being in the 16- to 20-year-old age range. The sample had a higher percentage of Blacks than the 1980 census (16 versus 12 percent) and a lower percentage of whites (77 versus 83 percent) and Hispanics (5 versus 6 percent). For the vast majority of fast-food employees, there is no link between job and schooling. Despite employees' strong interest in being promoted to management-level jobs (especially among minority workers), most restaurants recruited their management trainees from outside the restaurant. As might be expected, the issue of "overworked and underpaid" was a clear concern among employees. On the positive side, employment in the fast-food industry did appear to offer an opportunity to develop a number of transferable, job-related skills. Employment in the fast-food industry appeared to have little effect on performance in school or the highest grade completed. (Appendixes to this report include the hourly employee questionnaire and selected anecdotes from the survey.) (MN)

Descriptors—Educational Attainment, Education Work Relationship, *Employee Attitudes, *Employment Experience, *Employment Patterns, Employment Potential, *Employment Practices, Employment Qualifications, *Food Service, *Hispanic Americans, Job Performance, Job Training, Labor Market, National Surveys, Occupational Mobility, Salary Wage Differentials, Student Educational Objectives, Transfer of Training, Work Attitudes

Identifiers—*Fast Foods

A study examined the employment of Hispanics in the fast-food industry. Data were obtained from a national survey of employees at 279 fast-food restaurants from seven companies in which 194 (4.2 percent) of the 4,660 respondents reported being Hispanic. Compared with the total sample, Hispanic fast-food employees were slightly less likely to be female (62 versus 66 percent) and somewhat younger (75 versus 71 percent below the age of 20). More Hispanic fast-food industry employees were in general rather than vocational or academic programs, with fully 18 percent not knowing which program they were in. The grades of the respondents were fairly high, with only 14 percent reporting grade averages of C or below. The work ethic appeared to be alive and well among the Hispanic respondents, with 63 percent expecting work to be the central part of their lives and 85 percent saying they would work even if they didn't need to. Most planned to continue their education beyond high school. There was some link between employment in a fast-food restaurant and school for about one-fourth of the Hispanic respondents. As was true for their non-Hispanic counterparts in the survey, the Hispanic employees were able to learn a number of transferable job-related skills. (MN)

**A Handbook for Establishing Adult Education Programs in County Jails of Texas.**

Central Texas Coll., Killeen.

Pub Date—Aug 85

Note—14p.

Pub Type— Guides - Non-Classroom (055)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Adult Education, Adult Programs, Basic Skills, *Correctional Education, Correctional Institutions, *County Programs, Curriculum Development, High School Equivalency Programs, Postsecondary Education, Prisoners, *Program Development, Program Implementation, Regional Planning, *Remedial Instruction, *Student Centered Curriculum

Identifiers—Texas

This handbook presents guidelines for establishing adult education programs in county jails while simultaneously describing the establishment of an adult education program in the Bell County Jail in Texas in 1980. The three chapters of the handbook describe the preliminary planning, staff selection, and curriculum development and delivery stages of the Bell County Jail program, which was designed to accomplish the following goals: motivate and inspire both long- and short-term students; offer a diversified curriculum based upon student needs; provide diagnostic testing and General Educational Development (GED) certification; and deliver basic skills remediation in reading, writing, and mathematics. In addition, the second chapter lists 12 steps on planning and implementing an adult education program in a county jail, and the third chapter offers 12 guidelines for establishing a student-centered curriculum and evaluating a county jail education program. Descriptors—*Adult Basic Education, Adult Literacy, *Adult Reading Programs, *Beginning Reading, Behavioral Objectives, Check Lists, *Correctional Education, Illiteracy, Individualized Instruction, Learning Activities, Lesson Plans, *Literacy Education, Outcomes of Education, Prisoners, Program Effectiveness, *Reading Centers, Records (Forms)

Identifiers—310 Project, Alabama

The "LNR" Program was established at J. F. Ingram State Technical College as an individualized reading program for low-level and nonreaders (LNRs) who are incarcerated at one of four prisons in central Alabama. The program combined the following instructional methods: individual work, group work, instructor/student interaction, lecture, and computer lab. The program was divided into six centers designed to help students develop and maintain a functional reading level of 6.0: decoding, vocabulary building, comprehension development, dictionary usage, reference, and filling out applications and giving and taking directions. The program was evaluated by a three-member evaluation team. The first appendix to this report contains lists of materials and equipment used at each of the six skills centers along with a list of objectives and evaluation criteria addressed at each center. Other appendixes include demographic information on the program participants, a sample personal data sheet, a test review form, and a student check list. (MN)

**EDRS Price - MF01/PC06 Plus Postage.**
Descriptors—Abstracts, Educational Resources, Guidelines, *Peer Teaching, Postsecondary Education, Program Descriptions, *Program Development, *Program Evaluation, *Program Implementation, Resource Materials, Secondary Education, *Tutoring, *Vocational Education

This publication presents guidelines for planning, implementing, and evaluating a peer tutoring program within a vocational setting. Chapter 1 discusses benefits of peer tutoring and presents a compilation of guidelines, suggestions, and examples for planning, developing, and evaluating a peer tutoring program. Tasks in each area–program planning, development, and evaluation–are described. Chapter 2 presents an indepth look at 13 individual, diverse peer tutoring programs. They demonstrate the many program options, formats, and procedures available to those wanting to establish a new peer tutoring program or modify an existing one. The programs represent secondary and postsecondary institutions that typically offer both academic and vocational or technical education. The following areas are discussed for each program: development and administration, functions and operation, and evaluation and improvement. Chapter 3 provides a listing of selected resources and materials available for the vocational educator interested in implementing peer tutoring programs for special learner populations in vocational programs. Citations are arranged by type of document: program description, program handbook, and tutor handbook. The citations supply information regarding title, authors or developers, source, purpose, and annotation of the material or resource. Appendixes include sample forms and a list of books and sample handouts. (YLB)

Descriptors—Adult Education, Adult Programs, *Employment Programs, *Evaluation Criteria, *Evaluation Methods, Federal Legislation, Federal Programs, Guidelines, Inplant Programs, Job Skills, *Job Training, Models, Planning, Postsecondary Education, *Program Evaluation, Standards, Vocational Education
Identifiers—Job Training Partnership Act 1982, *Short Term Training

This guidebook for vocational planners and evaluators describes the many possibilities in evaluating short-term programs. It is intended for use by educators in postsecondary institutions developing and implementing short-term programs, those providing service under the Job Training Partnership Act, and employers who provide in-house skill training. An introduction provides an overview of the project on which the guidebook is based. Chapter 2 compares short- and long-term training programs in terms of duration, philosophy, organizational context, purpose, clientele, instructional staff, curriculum, and linkage with employers. Chapter 3 reviews evaluation models. Various ways to design an evaluation and evaluation criteria and standards are presented. The chapter also offers an evaluation framework that incorporates evaluative criteria appropriate for short-term programs. Chapter 4 discusses key administrative concerns in planning and implementing evaluation. It presents guidelines for conducting all types of evaluation–evaluability assessment, needs assessment, input evaluation, process evaluation, outcome evaluation, impact evaluation, and cost benefit/cost effectiveness analysis. Chapter 5 presents additional guidelines for selecting an evaluation approach. Two innovative approaches are presented: aggregate program review and peer review. The chapter ends with the postcard model–an abbreviated method of evaluating very short programs. Four pages of references conclude the document. (YLB)

Descriptors—Access to Education, *Apprenticeships, Cost Effectiveness, *Developed Nations, Educational Cooperation, Financial Support, Foreign Countries, Industrialization, *International Educational Exchange, Postsecondary Education, Program Administration, *Program Effectiveness, *Program Improvement, Sex Fairness, Vocational Education

This publication reviews available literature regarding apprenticeship in the United States and 17 other industrialized market-economy nations. It notes outstanding practices that may be replicated or transferred to strengthen U.S. apprenticeship. The publication begins by defining apprenticeships and outlining the unique features of U.S. apprenticeship, citing both its strengths and deficiencies. In the remainder of the work attention is given to improvements in seven deficiencies of U.S. apprenticeship: variable quality of training offered, inadequacies in the administration of apprenticeship, inadequate numbers trained, concerns about the cost effectiveness of apprenticeship, inadequate financing for certain apprenticeship programs, limited access to apprenticeships, and unclear role and relationship to other training. Promising practices are detailed that may help remedy the problems identified. Recommendations regarding the transferability of practices are suggested, including broader training, regular curriculum review and updating, development of trade examinations, establishment of a resource center, Federal leadership, adoption of a system of Industrial Training Boards, recruitment of women, promotion of alternant training, and collaboration between vocational education and apprenticeship. The paper calls for communication and dialogue with other industrialized countries on the subject of apprenticeship and industrial training. Nine pages of references conclude the report. (YLB)

This policy paper explores the nature and significance of human capital development. Its intended audience includes policymakers, students and researchers, and citizens who bear the ultimate responsibility for public policy. An introductory section defines human capital broadly to include all productive capacities acquired at some cost and emphasizes the diversity of the processes that develop such capacities. The remainder of the paper focuses exclusively on educational and training processes that contribute to preparation for work. Section 2 is a descriptive inventory of the extent and nature of such processes. Four major categories of institutions that play a role in these processes are described: formal preschool programs, regular education, adult education and training, and federally financed employment and training programs. Section 3 reports the best available evidence on the effectiveness of four major systems of human capital development: Head Start, public primary and secondary education, federally financed employment and training programs for economically disadvantaged persons, and training for dislocated workers. Section 4 presents recommendations for public policy: increasing human resource flexibility, expanding compensatory preschool education, increasing the Federal role in primary and secondary education, expanding employment and training programs, and attaining efficiency and equity in social policy. Seven pages of references conclude the report. (YLB)

Identifiers—Impact Studies

A study compared different firms' methods of recognizing and rewarding employee performance and examined the impact of such recognition and reward on such factors as involuntary and voluntary labor turnover and worker productivity. Data from a survey of 3,412 employers that was sponsored by the National Institute of Education and the National Center for Research in Vocational Education in 1982 indicated important differentials between firms with respect to the prevalence and power of merit-based pay. Although workers' reported productivity relative to peers had important and reasonably rapid effects on relative wage rates at small- and medium-sized nonunion establishments, it had almost no effect at unionized establishments with more than 100 employees and at nonunion establishments with more than 400 employees. Relative wage rates did respond positively to the large differences in productivity between workers doing the same job; however, these responses were incomplete. When considered against the background of the inevitability of significant errors in measuring productivity, the wage differentials of employees with about 1 year of tenure create a strong a priori case that compensation for greater productivity is often only partial. (An appendix to this report describes the data collection measures and sample population on which the study's conclusions are based.) (MN)

ucation, Personnel Policy, Personnel Selection, Policy Formation, Productivity, Promotion (Occupational), Recognition (Achievement), Rewards, *Salary Wage Differentials, Secondary Education, Unions

Wage rates and earnings give misleading signals to public and private policymakers as to the benefits of certain kinds of education and training investments. These misleading signals result from the fact that (1) workers and employers prefer employment contracts that either do not recognize or only partially recognize differences in productivity among workers doing the same job and (2) important dimensions of education and training accomplishment are often not signaled to potential employers and therefore have limited influence on the allocation of workers to jobs. Consequently, there are significant productivity differentials between workers receiving the same pay for the same job, and some of these are related to educational and training achievements that are not efficiently signalled. In light of these findings, policymakers in the education and training sectors should learn to generate better signals of the learning that occurs in school or on the job on the assumption that if employers have access to information on the competency that job applicants have developed in school they will use it. The second response to the problem should be to restructure the system of rewards and recognition in high schools. (An appendix to this report describes the data collection measures and sample population on which the study's conclusions are based.) (MN)

This collection contains three studies of the relationship between incentives, learning, and employability. The first study, "Incentives, Learning, and Employability," by John Bishop, models students' choices concerning what to learn and how much effort to spend learning it in terms of the outcome of a comparison of benefits and expected costs and examines various strategies for use in increasing student motivation to learn. The second paper, "A Formal Model of School Reward Systems" by Suk Kang, examines pass-fail and graduated reward systems. The third paper, "The Design of Handicapping Systems for Rewarding Learning: A Mathematical Analysis of Intertemporal Issues" by John Bishop and Charles Wilson, examines alternative reward systems, a model of behavior, measures of cost-effectiveness, and student response to different reward systems. Appendixes to the third paper include the handicapping model and a discussion of the formulas used in the study; appendixes to the overall report include notes on the observational data collection procedure used, a discussion of the fair distribution rule in a cooperative enterprise, and an examination of the relationship between incentive schemes and effort level by the agents in a cooperative enterprise. **EDRS Price - MF01/PC10 Plus Postage.**

Descriptors—Competence, Employment Practices, *Employment Qualifications, Influences, *Job Application, *Job Performance, National Surveys, *Personnel Policy, *Personnel Selection, Productivity, *Recruitment

A study examined the impact of recruitment policies on the flow of job applicants and quality of new workers. The process of determining a recruitment and selection strategy appeared to be one of considering the trade-offs between engaging in extensive search (high number of applicants per offer) or intensive search (great amount of time spent per applicant) while minimizing the indirect costs of hiring. The number of job-seeker contacts was more responsive to variables describing the probability and number of vacancies than measures of attractiveness of the job. Most firms had a sufficiently autonomous flow of job seekers to avoid undertaking new recruitment efforts each time they had a vacancy. It appeared that since competition forces all firms to pay wages roughly equal to the market's assessment of a worker's generalized productivity, a firm can profit from hiring a worker only if (1) it has information about the worker not available to other employers that implies the worker is better than the market seems to think or (2) the worker has a comparative advantage in working at that firm. (Appendixes to this report include the second-wave report of the National Survey of Employer Hiring and Training Practices and the Employer Demand survey instrument.) (MN)

**Stockpiling Job Applicants.**

Pub Date—Dec 84

Note—12p.; For a related document, see CE 044 327.

Pub Type— Reports - Research (143)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—Comparative Analysis, *Employment Practices, *Evaluation Criteria, *Job Applicants, *Personnel Policy, *Personnel Selection, Prerequisites, Professional Occupations, *Recruitment, Service Occupations, Unions

Identifiers—*Stockpiling

A study examined the way in which stockpiling job applications affects a firm's search for a new employee when an opening arises and the extent to which employers make use of applications they have stockpiled. Data on these questions were obtained from a survey of 2,264 employers that was sponsored by the National Institute of Education and the National Center for Research in Vocational Education in 1982. As hypothesized, stockpiling had a positive impact on extensive search as measured by the number of applicants interviewed. However, intensive search as measured by the number of hours spent per applicant significantly declined with stockpiling. Firms using the stockpiling strategy received 33 percent more phone calls and 35 percent more visits, and they accepted 44 percent more applications. When filling a job vacancy, larger firms called prior applicants at a much higher rate (58 percent for firms with more than 250 employees versus 27 percent for firms with fewer than 10 employees). Stockpiling was most common for service jobs and least common for professional and managerial jobs. Thus, likelihood of job vacancy and lack of specialized job requirements were associated with use of the stockpiling strategy. Unionized firms were significantly more likely to interview prior applicants. (MN)

Identifiers—*Job Training Partnership Act 1982

Process evaluation has great potential to meet the needs of managers who are charged with operating employment and training programs under the Job Training Partnership Act (JTPA). One adaptation of process evaluation could make use of a personal computer to enhance the cost-effectiveness and quick turn-around time of this method of assessing the progress of job training programs. Advantages of process evaluation include the following: (1) it is helpful in diagnosing problems before they become serious; (2) it is cost effective; and (3) it closes the performance feedback loop quickly. JTPA managers implementing a process evaluation system must make choices, such as choosing what to evaluate, selecting appropriate evaluation measures, selecting an evaluation procedure, and integrating evaluation findings for program improvement. Solving the problems encountered during process evaluation requires computerization of evaluation activities, standardization of process evaluation criteria, inde-

pendent local evaluation, and enhanced staff attitudes toward evaluation. (KC)

Descriptors—Adult Basic Education, *Correctional Education, Correctional Rehabilitation, High School Equivalency Programs, Postsecondary Education, Prisoners, Program Effectiveness, *Program Implementation, *Program Improvement, *Research Needs, *Research Utilization, *Vocational Education

This paper contrins two addresses on improving the quality of correctional education through vocational education research and resources. In the first part, Osa Coffey, Executive Director of the Correctional Education Association, speaks of the need for research and resources in vocational education for incarcerated persons. She states that the field today lacks clear direction and purpose, but is nevertheless ready for improvement and change. She outlines corrections today, the educational needs of inmates, the scope of current educational service delivery, the cost of corrections, the goal of correctional education, and research and resource needs in correctional education. She concludes that the services of researchers and the National Center for Research in Vocational Education are greatly needed to ensure that inmates receive the education they need to change their lives. In the second part of the paper, Dianne Carter, a corrections programs specialist at the U.S. Department of Education, presents a summary of some of those characteristics that she believes are common among good correctional education programs. She divides these characteristics into four categories: environmental characteristics, administrative leadership, instructional personnel, and instructional content and strategies. Before discussing these, she briefly describes the offender population. She concludes that partnerships between educational researchers and correctional facilities are needed to improve programs. (The paper includes a record of the question-and-answer session, criminal justice and correctional education statistics, prison population statistics, a policy statement on correctional education by the U.S. Department of Education, and references.) This paper notes that vocational education has been associated with economic growth since the turn of the century, when such growth was used as a justification for the funding of early vocational training. Today, vocational education's contributions to economic growth include efforts such as employer demand research, dislocated worker programs, strategies for school/business linkages, and entrepreneurship education. Following a short history and rationale for the connection between vocational education and economic growth, this paper (1) describes a variety of connections between vocational education and economic growth and their underlying theoretical foundations, (2) notes the historical context in which the connections were shaped, (3) lists policy initiatives that were stimulated by the various connections, and (4) suggests future vocational education policy issues to be resolved in order to maximize the effects of vocational education on economic growth. Throughout the paper, the ways in which vocational education supports growth are divided into four types that reflect different periods in the nation's economic history: traditional, locational, emerging, and potential. The discussion is restricted to vocational education provided by the public sector, on which public policy can have a direct effect. Questions and answers on school-business cooperation, entrepreneurship education, and skill training in relation to economic growth follow the presentation. (KC)

Following some years of eclipse by the basics, imparting thinking ability to students is once again emerging as the primary goal of public education. How to teach thinking skills, is, however, subject to question. For example, not only is the domain of the higher order skills broad and imprecisely specified, there is also considerable naivete in the public's perception of the conditions under which thinking skills are learned. In particular, recent legislative actions are based on unexamined assumptions about the conditions under which these skills are learned. In response to the reform rhetoric, many states have mandated increased science and mathematics requirements for all students for high school graduation. These requirements are based on the belief that reasoning, problem solving, and learning skills are best taught in these courses. However, there are concepts that educators should be aware of; for example, (1) not all students have the ability to attain higher order cognitive skills; (2) mathematics and science are not the only ways for teaching these skills; (3) high school is too late to begin teaching thinking skills; (4) experiences with physical systems play a considerable part in development of basic mental operations; (5) less able students need detailed instruction; and (6) rote performance is inferior to performance with understanding. It is important that educators keep these ideas in mind as they look for ways to teach thinking skills. Vocational education can play an important role in teaching these skills; science and mathematics are not the only way. (Several problem-solving examples are provided in this paper.) (KC)

**Adult Literacy Programs: Services, Persons Served, and Volunteers. OERI Bulletin.**
Center for Statistics (OERI/ED), Washington, DC.
Report No.—CS-86-2176
Pub Date—Apr 86
Note—18p.; Tables contain small type.
Pub Type— Reports - Research (143) — Numerical/Quantitative Data (110)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Adult Basic Education, *Adult Literacy, *Adult Reading Programs, Delivery Systems, Educational Practices, Educational Trends, Enrollment, Instructional Materials, *Literacy Education, National Surveys, Outcomes of Education, Program Content, *Volunteers, *Volunteer Training

A study examined the services provided by and the role and training of volunteers in adult literacy programs in the United States. Data on a national probability sample of approximately 800 adult literacy programs that was collected by the Center for Statistics through its Fast Response Survey System indicated that in spring 1985 adult literacy instruction was provided in an estimated 2,900 adult education programs offered through school districts, community colleges, and adult learning centers, as well as in an estimated 1,300 local adult literacy programs (LALPs), including volunteer groups, community-based organizations, other private literacy organizations, and libraries. About half of the adult education programs and nearly all the LALPs used volunteers. Five types of programs were offered: basic literacy, pre-General Educational Development (GED) examination, GED, oral English-as-a-second language (ESL), and oral and written ESL instruction. Approximately 729,000 persons received instruction during a 1-month period in 1985. Volunteers were used in the following capacities: one-to-one tutoring, teaching small groups, serving as teacher's aides, and teaching classes. Lack of people to volunteer was cited as the main barrier to using volunteers. Ninety-six percent of the programs using volunteers provided training for them, with 86 percent providing an average of 13 hours preservice training for new volunteers. In 80 percent of the programs training was conducted by program staff or other volunteers. Fifty-nine percent of the programs used Laubach Literacy Action materials and 43 percent used in-house materials. Forty percent of the programs surveyed rated their volunteers as excellent, 51 percent as good, 7 percent as fair, and 2 percent as poor. (MN)

**Comparing Job Placement of Vocationally Trained and Untrained Inmates While Residing at a Community Correctional Center in Florida.**
Pub Date—30 Dec 85
Note—32p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Adult Education, Comparative Analysis, *Correctional Education, Correctional Institutions, *Educational Benefits, Educational Research, *Job Placement, Outcomes of Education, Participation, *Prisoners, *Vocational Education

A study determined if there was a significant difference in job placement between inmates who had received vocational training while incarcerated at major institutions and inmates who had participated in no such training. A second purpose was to determine if a significant relationship existed between vocational training and job placement. The population was 94 inmate residents of the Miami North Community Correctional Center. Data were collected by an interview questionnaire. The Chi Square Test was used to test the difference between the two sample populations; the Chi Square Test of Independence was used to test for a relationship between vocational training and job placement in vocational fields. Results showed no significant difference in employment between trained and untrained inmates. Job placement was found to be independent of the vocational training received. These suggestions were made: vocational programs in the correctional system should be evaluated, a study should be initiated to determine if a significant difference in job retention exists between vocationally trained and untrained inmates after release, and a study should be made to determine if there is a significant difference in enrollment and program completion between inmates in the last five years of their sentence and inmates with more than five years to serve. Retraining, *Two Year Colleges, Vocational Education

Developed for those actively involved with planning the future of two-year postsecondary educational institutions, this publication synthesizes information from the literature with the knowledge and practice in the field regarding the impact of the new adult majority. Chapter I summarizes the issues. Chapter II provides an overview of some of the forces driving institutional change. It discusses external demands for change which center around three key issues–appropriateness, effectiveness, and accountability–as well as internal pressures such as student demands, need to update equipment and faculty, and low student enrollments. Chapter III focuses upon the changing clientele and the changing institutional relationships with the different client groups. Chapter IV evaluates changing institutional goals, governance, structure, and funding. Chapter V provides an analysis of possible changes in the programs and program-related components of the institution. These components are discussed: admissions and assessment, academic module, occupational module, placement, evaluation and outcomes, and auxiliary services. Faculty issues directly affecting institutions are also considered. Chapter VI presents a model and implications for institutional change. Each of six program areas are analyzed by seven program components. Chapter VII summarizes general, client-related, institution-related, and program-related issues and trends. (YLB)

Identifiers—Computer Assisted Design, Computer Assisted Drafting, *Computer Assisted Manufacturing

This publication identifies exemplary programs and human resources in the automated manufacturing technologies. Its purpose is to assist vocational education program planners and curriculum specialists in updating programs and staff skills to prepare for high technology. Chapter 1 is an introduction. Chapter 2 describes the seven U.S. Secretary of Education's exemplary programs in narrative form. Program name, institution, and the institution's location are highlighted at the beginning of each entry. The program description follows. Contact information, including mailing address and telephone number, is highlighted at the end. Chapter 3 presents in a graphic format exemplary programs identified in a nationwide survey. Programs represent 18 technical areas: avionics, biomedical equipment technology, computer-aided design and drafting, computer-aided manufacturing, computer engineering technology, computer numerical control, electrical technology, electronics technology, electromechanical technology, graphics technology, industrial optics, laser technology, mechanical engineering technology, process control and instrumentation technology, robotics, semiconductor technology, solar technology, and telecommunications. A heading at the top of each page identifies the area. Information presented in box-form includes program title; contact information, including mailing address and telephone number; whether assistance is available; whether a syllabus is available; whether the program is competency-based; start date; and a narrative program description. This publication presents employer and employee perceptions regarding life and job adjustment patterns of dislocated workers. Its intended audience includes the various groups who work with dislocated workers, including service providers and outplacing and hiring employers, and the displaced workers themselves. Chapter I provides an overview of the problem of occupational adjustment. Chapter II analyzes job and life adjustment experiences of 120 blue-collar, dislocated workers. Seven categories of adjustments that workers reported making on new jobs are addressed. Eight worker profiles are included. Chapter III provides information from 17 employers who had hired dislocated workers. Information is presented regarding characteristics of re-employed workers and employer practices related to hiring, orienting, training, and supporting dislocated workers. Employers' observations concerning dislocated workers' job adjustment are also presented. Chapter IV reviews major problems dislocated workers experienced during unemployment and the assistance and services they sought and received. Workers' perceptions and recommendations are examined for three categories of services: informal assistance, government transfer payments, and special programs. Chapter V reviews worker and employer recommendations for service improvement. Guidelines for easing the unemployment-to-reemployment transition are offered for dislocated workers, hiring employers, and service providers. (YLB)

This information packet contains sections from a high school advisor/advisee handbook and the accompanying student planning guide. The introduction explains the roles and responsibilities of advisors, lists four goals of the advisement program, and lists three areas of focus of the program: (1) self-awareness; (2) career awareness; and (3) school awareness. Three objectives for the 1986-87 school year are also given. The structure of the 1985-86 advisement program is outlined briefly and responsibilities of program directors, the facilitator activity group, and the advisory teams are listed. Sections on questions and answers, advisement outcomes for students, a description of advisor qualities, and the role of the counselor illustrate the general thrust of the program. A student planning guide to help students plan their high school courses around their eventual career goals is included and requirements for five different high school pathways (honors, college, liberal arts, vocational/occupational, and general) are presented in table form. Also included are a list of ideal characteristics of an advisement program and a list of advisement resources. (NRB)

**Locus of Control in Alcoholics Undergoing Treatment.**

Pub Date—[83]

Note—16p.

Pub Type— Reports - Research (143)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—*Alcoholism, Behavior Modification, Cognitive Restructuring, *Counseling Techniques, Drinking, *Group Therapy, Individual Power, *Locus of Control, *Outcomes of Treatment, *Socialization

Alcoholism is a complex behavior pattern. Social learning theory, which is concerned with the analysis of why individuals behave in certain ways and the effects of reinforcement patterns in their behaviors, offers an alternative to traditional treatments of alcoholics. Among alcoholics, drinking is a control issue. Locus of control is viewed as a measure of the degree of responsibility an individual perceives himself to have over meaningful life events. The Rotter Internal External (I-E) Locus of Control Scale represents the translation of generalized expectancies for locus of control into a measure of specific expectancies dealing with a variety of drinking behaviors. The I-E Scale was completed by 15 alcoholic clients before and after a 6-week treatment program which emphasized process-oriented small group therapy. Subjects were encouraged to take responsibility for making life changes which would increase the probabilities of their sobriety and general social and personal adjustment. Within this specific alcoholic patient population, the results showed a significant shift from externality as measured in the pretest toward internality in the posttest. These findings suggest that the alcoholics' greater internality was a function of exposure to treatment rather than a predisposing personality dimension and that externality was not a fixed trait of the alcoholic population since it was significantly changed following treatment. Descriptors—*Age Differences, Group Counseling, *Group Therapy, Mental Health, National Surveys, *Older Adults, *Participant Characteristics, Participation, *Program Effectiveness, *Self Help Programs

A recent review of published and unpublished data suggests that the elderly are underrepresented in most self-help groups. Some national groups, such as Alcoholics Anonymous do serve the aged but many others such as widow groups do not. A recent national survey of over 3,000 households conducted by Mellinger and Balter examined the use of psychotropic medication and the help-seeking patterns of troubled respondents. A secondary analysis of the Mellinger-Balter data was conducted to examine patterns of participation in self-help groups by the elderly, the effectiveness of self-help groups, and the differential patterns of participation based on problem or disease to determine what types of groups are most successful in serving the elderly. Critical policy issues raised by these analyses involve the following: (1) the relative value of age-homogeneous groups when compared with age-heterogeneous groups; (2) the best forms of legitimization of self-help groups; and (3) the role of the professional service system. These findings have implications for the different strategies of generating and maintaining self-help groups including professional transfer models, financial aid, and consultation models. A reference list and 15 data tables are appended. (Author/ABL)

Descriptors—*Black Students, *Desegregation Effects, Grade 7, Junior High Schools, Junior High School Students, Middle Schools, Peer Relationship, *Racial Relations, *School Desegregation, *School Organization, School Policy, Social Networks, *White Students
School desegregation has been promoted as a means for decreasing racial hostility and for raising minority achievement. A study was conducted to explore the effects of school organizational structure on the race/gender composition of interacting social networks of adolescents attending two middle schools. While the schools varied in the opportunities provided for interactions among classmates, each had a student body similar in socioeconomic status and percentages of white and black students. Middle School (MS) had interdisciplinary, multigrade team organization with random assignment of students resulting in a heterogeneous student population. Junior High (JH) had ability tracking with limited student interaction. Data were collected from 345 seventh graders at JH and 332 seventh graders at MS. Students rated how often they talked with all other students in their grade. Factor analysis was used to describe the social networks existing at each of the schools. By controlling opportunities for interactions, school structure was found to affect the size, race, and gender of social groups and linkages between them. The results indicated that: (1) black males were better represented in white social networks at MS than at JH; (2) black females were equally accepted in both schools; and (3) acceptance of whites by blacks was generally better at MS than at JH. These results suggest that a school's structure is important in fostering interracial relationships. References and data tables are appended. (Author/NRB)

Descriptors—Attitudes, Diseases, *Nurses, *Physician Patient Relationship, *Physicians, *Psychological Patterns, Special Health Problems, *Stress Variables
Identifiers—*Acquired Immune Deficiency Syndrome
Acquired Immune Deficiency Syndrome (AIDS) has been receiving considerable attention by the medical community as well as by the public. This attention is due to the rapid increase in cases of AIDS, the uncertain etiology of the disease, and the poor prognosis of the disease. Although some research has investigated the psychological impact of AIDS on its victims, little research has been conducted on the psychological impact of AIDS on the medical staff caring for AIDS patients. In an attempt to examine this impact, eight nurses and four physicians involved in the care of an AIDS patient and a matched, non-AIDS patient responded to four self-report measures which assessed the psychological distress associated with working with each patient. Compared to working with the non-AIDS patient, the physicians and nurses reported experiencing increased anxiety, greater interference in non-work activities, more frequent negative ruminations, and negative perceptions regarding the patient's behavior while working with the AIDS patient. These findings support previous anecdotal reports that medical staff do experience psychological distress when working with an AIDS patient. Because of the fears and concerns engendered in medical personnel by providing care to AIDS patients, psychological and educational interventions are needed to reduce staff's discomfort and thereby facilitate optimal care of AIDS patients. This document, written for counselors and educators, describes a computer-assisted program for career counselors. The ten tasks of a counselor-client goal setting process formulated by Philip Patsula and incorporated into this program are presented. The areas of experiencing a positive atmosphere, elaborating on constraints, and evaluating employability strengths are discussed. Field testing of the program throughout Canada is briefly discussed. Two videotape demonstrations of the ten tasks which were developed to complement the computer program are described. A micro-counseling training approach used to present the program is outlined. This document focuses on the computer program designed to outline the tasks and skills needed by the counselor in setting counseling goals and in moving toward action plans. The first part of the introduction from the one-hour computer program and a section from the middle of the program dealing with specific counselor skills are appended. (NRB)

Descriptors—*Child Abuse, Children, *Counseling Techniques, Emotional Response, Foreign Countries, Parent Child Relationship, *Parenting Skills, *Parent Role, Parents, *Stress Variables, *Videotape Recordings
Identifiers—Canada
Child abuse involves more than the use of corporal punishment with a child. Investigators have measured parents' emotional reactivity and attributions in relation to aversive child behavior. A "video recall" procedure has been used for assessing affective responding of adults engaged in marital conflict and has been valid for obtaining self-reports of affect in marital interaction. Another approach to studying emotional reactivity uses imagery to recreate sensory cues that precede or accompany anger and arousal. A third variation for bridging the gap between parental recall and realistic situations precipitating abuse involves a video-simulated stress procedure allowing the examiner to record parental responses to a number of stress-inducing child situations that closely resemble abusive circumstances. In this technique, eight videotaped scenes of toddlers and preschoolers which simulate stressful childrearing situations in which the child demonstrates either excessive or deficient behavior, are shown to subjects. Subjects viewing the scenes assume the role of the hidden parent in the scene. Responses to the scenes are measured by recording the subjects' verbal and behavioral indices of emotion, coping statements, and physiological changes. Subjects also provide self-reports of negative affect, sense of control, and choice of intervention or discipline. Pilot results have shown promise in detecting differential reactions to common child-related stress. (ABL)

**A Theory for the Development of Machismo.**
Pub Date—Nov 85
Note—13p.; Paper presented at the Annual Meeting of the National Council on Family Relations (Dallas, TX, November 4-8, 1985).
Pub Type— Opinion Papers (120) — Speeches/-Meeting Papers (150)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Individual Development, *Males, *Parent Child Relationship, Psychological Patterns, *Self Concept, Self Esteem, *Sex Role, Sex Stereotypes, *Socialization, Theories
Identifiers—*Machismo
With changes in sex role expectations in marriage, family researchers have begun to examine the concept of machismo. Two characteristics dominant in the study of machismo are aggressiveness and hypersexuality. A biological model of machismo asserts that males everywhere tend to be more aggressive than females, a sex difference which appears to have a genetic base. A modern theory of sociobiology offers another explanation for macho behavior. According to this theory, much of animal, and perhaps human, behavior is influenced by the drive for one's genes to reproduce themselves. A generally accepted psychological theory views machismo as an expression of an inferiority complex. Most research on machismo is restricted to the lower classes. Research from Mexico, Puerto Rico, England, and the United States suggests that lower class males suffer from job insecurity and compensate for their feelings of inferiority by exaggerating their masculinity and by subordinating women. Other studies point to distant father-son relationships as one factor leading to feelings of inferiority and to the development of machismo. Women may support machismo by being submissive, dependent, and passive. The combination of feeling inferior and acting superior is machismo, a trait that is repeated generation after generation. If men can be socialized toward male parental investment, the incidence of machismo may decline and the incidences of men feeling self-esteem and women feeling equal to men may rise. (NRB)

Identifiers—Canada
Standard procedures for teaching child management skills to parents may be inadequate for disadvantaged populations. The Parent/Child Early Education Program was developed to serve parents at risk of child abuse. Parent and child variables were measured at pretest in 41 families referred to this program. A profile of the families revealed that, in general, these families were single-female-headed households living on welfare support. Parents had an unstimulating, noneducational home environment for childrearing, more negative than positive parent-child interactions, a significant number of problems reported on the Child Abuse Potential Inventory, and a significant number of affective symptoms based on the Beck Depression Inventory. Children were described by their mothers as showing below average levels of adaptive behavior. The most common form of dropouts were no-starts who failed to attend sessions following the pretest assessment period. A discriminant function analysis of pretest data was conducted to determine which factors were the best predictors of finishing treatment. The results suggest that parents who are more likely to follow through with this form of training report more distress at pretest and show a more balanced ratio of positive to negative interaction with their children. In response to these client characteristics, a format for parent training has evolved which is tailored to the compatibility of the therapist, the extent of training/knowledge covered, and the target problems to address. (NRB)

This document contains the text of a Congressional hearing called to examine the status of aging veterans and health care issues. Opening statements are given by Congressmen Jim Saxton, Thomas J. Tauke, and Christopher H. Smith, and testimonies are presented from 20 witnesses. Members of veterans' associations testifying include representatives from a Veterans' Administration medical center, the New Jersey Veterans' Memorial Home, Disabled American Veterans, and the Veterans' Administration Clinic Task Force. Witnesses from New Jersey include the director of the Home Health Agency Assembly of New Jersey, a representative of the mayor of Hamilton Township, the deputy commissioner of the New Jersey State Department of Health, an administrator with the Garden State Rehabilitation Hospital, the public health coordinator and a public health nurse with the Ocean County Health Department, and a member of the Ocean County Board of Social Services. Other witnesses include a representative of the Health Care Financing Administration, the president of Community Memorial Hospital, a counsel for the American Association of Retired Persons, an aide to Congressman James J. Howard, a senior citizen, and two veterans. Issues examined and discussed include limits on veterans health care benefits, alternatives to institutionalization, reimbursement rates, and health care costs. (NRB)

Identifiers—Congress 99th
This document contains the text of a Senate hearing on barriers to health care for the chronically mentally ill. Senator Orrin Hatch discusses the history of health care for the mentally ill and the changing role of the federal government, and Senator Edward Kennedy summarizes legislation initiated for the chronically mentally ill. The superintendent of the Mental Health Institute in Independence, Iowa, a professor of psychiatry at the University of Wisconsin, and a chronically mentally ill person testify on behalf of the National Mental Health Association. Testimonies are also included from the director of the National Institute of Mental Health; an officer of the National Alliance for the Mentally Ill; the executive director of the Davis County Mental Health Center in Farmington, Utah; and the director of the Institute of Psychiatry and Human Behavior at the University of Maryland. Two witnesses discuss their children's mental illnesses. Prepared statements are included from an executive officer of the American Psychological Association and from the president of the International Association of Psychosocial Rehabilitation. Witnesses discuss their concerns regarding the barriers to care for persons with chronic mental illness and explore the roles of family, community mental health programs, and state and federal governments in providing care. Prepared statements and additional question-and-answer materials are included. (NRB)

Descriptors—*Adult Day Care, *Crime Prevention, *Elder Abuse, Hearings, *Older Adults, *Victims of Crime, *Violence
Identifiers—Congress 99th, Florida
This document contains the text of a Senate hearing on crimes against the elderly. Senator Paula Hawkins examines funding for day care of the elderly and discusses the crime of elder abuse and other crimes against the elderly. Two victims of abuse testify about their abuse, a victim of violent crime describes her victimization, and a purse-snatching victim who formed the Citizens Council on Crime discusses her experiences. The administrator of the South County Day Care Center in St. Petersburg, Florida testifies about elder abuse and explains her center's policy on reporting cases of suspected abuse. A doctor from the Department of Gerontology, University of South Florida testifies about the problems associated with reporting elder abuse. A former city police chief who is presently the director of the Bureau of Justice Assistance presents the findings of a study on elder abuse. The president of the Florida Crime Prevention Association examines crime prevention activities. An administrator with the United States Securities and Exchange Commission testifies about the targeting of the elderly for crime, an assistant chief postal inspector describes mail order crimes against the elderly, and a consumer affairs official discusses consumer fraud against the elderly. A prepared statement is included from the American Association of Retired Persons. (NRB)

**The Parent's Handbook: Understanding Child Sexual Abuse.**
Oregon Governor's Office, Salem.
Pub Date—Jun 85
Note—52p.
Pub Type— Guides - Non-Classroom (055)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—*Child Abuse, Children, *Crime Prevention, *Parent Child Relationship, *Sexual Abuse, *Social Services
Identifiers—*Oregon
This document, a resource tool on child sexual abuse for parents, was prepared by the state of Oregon. An introductory section defines child sexual abuse and discusses methods of prevention of such abuse. The prevention practices described include the following: (1) teaching children that they have the right to control who touches their bodies; (2) knowing where children are at all times; (3) not placing a child's name on his clothing; (4) giving children passwords; and (5) teaching children to deal safely with strangers. Tips for selecting a preschool or child care center are discussed. Indications of how to spot sexual abuse and ways of dealing with known abuse are discussed. Public and private agencies dealing with child abuse are listed for each county in Oregon. (ABL)

Descriptors—*Adolescents, Crime, *Delinquency, Delinquent Rehabilitation, Juvenile Courts, *Recidivism, *Recordkeeping, *State Action, *Statistical Data
This document describes three options for a statewide statistical system for tracking recidivism of juvenile delinquents placed outside their homes in treatment programs. The information is intended for use by the state in allocating resources. The options described involve potential use of juvenile court records, placement data, and/or fingerprinting. The background of the legislation requiring a report on tracking juveniles and the project methodology are described. The issues to be evaluated are discussed, including information needs and definitions of recidivism and rehabilitation treatment programs. Current laws, regulations, and practices pertaining to recordkeeping on criminals and delinquents are described with emphasis on fingerprinting, collection of juvenile records, confidentiality of records, authorizing statutes, the Bureau of Criminal Identification, automated criminal history system, and current operating statistical systems. The three options are described in detail with related materials included on access to juvenile records, required legislation, and projected costs. Appendices include a copy of the relevant legislation (Assembly

Bill 2755); a summary of interviews with Juvenile Justice System practitioners and others; extensive exerpts from California criminal record security statutes and regulations; a policy statement on release of offender information; and sample Justice Department forms. A reference list is also provided. (ABL)

**Sibling Interaction in Adulthood.**
Pub Date—Nov 85
Note—45p.; Paper presented at the Annual Meeting of the National Council on Family Relations (Dallas, TX, November 4-8, 1985).
Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—*Adults, *Affection, *Family Relationship, Interpersonal Relationship, *Proximity, *Responsibility, *Siblings

Although relationships between siblings potentially have the longest duration of any human relationship, research has not yet established the salient, relevant features of the sibling role in adulthood. An investigation was conducted to identify and examine the influences on the frequency of, and motivation for, contact with adult siblings. Twenty-one variables identified by the literature as affecting the frequency of contact between adult siblings were examined. These included relationship, sibling structure, family structure, demographic, and proximity variables. Using a two-stage systematic sampling procedure of telephone and mail surveys, a sample of 313 adults over age 25 who had living siblings was obtained. Subjects completed mailed questionnaires measuring the 21 variables, the frequency of sibling contact, obligation to have contact, and desire for contact. Regression analyses showed that nine variables accounted for the majority of the explained variance. Of these, geographic proximity, emotional closeness, and the sense of obligation towards siblings were the most important predictors. Future research needs to account for differences between voluntary and obligatory contact in order to further understanding of how adult siblings affect one another's lives. (NB)

**Using Life Development Visualization with High School Students and Recent Graduates for Career Exploration.**
Pub Date—29 Oct 85
Note—15p.
Pub Type— Guides - Non-Classroom (055)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Career Counseling, *Counseling Techniques, Freehand Drawing, Goal Orientation, *Group Counseling, High Schools, *High School Students, *Imagery, Individual Development, *School Counselors, Values Clarification, *Visualization

This document presents Life Development Visualization as an effective counseling technique to be used in combination with other career exploration activities with groups of high school students or recent graduates. Visualization is described as a process orientation which blends an individual's personality and spiritual levels into a comprehensive whole and which provides a growth model for human development. It is emphasized that specific counseling techniques within visualization should be selected according to the individual and general situation, personality types, unique goals, and desired path of development of the students. Suggested techniques include guided imagery, awareness activities, symbolic art, meditation, well development, journal keeping, centering, focusing, and mind play. A set of four exercises, designed to aid students in examining some questions relative to what is of value and importance in their lives is described. The exercises presented, which can be completed in a 2 to 3 hour session, involve relaxation techniques, visualization, and imagery. Four questions to ask students are given: (1) where am I now in my life; (2) where do I want to go in my life; (3) what is blocking me; and (4) how can I get there. Instructions are given for helping students to relax, answer each question with a symbol, draw their symbols, and share their drawings. Materials needed are listed and it is noted that counselors using visualization will need student volunteers and support from both administrators and parents. (NB)

Descriptors—*Adolescent Development, Adolescents, *Females, *Incest, Mothers, Parent Child Relationship, *Psychological Needs, Psychological Patterns, *Psychotherapy, Sexual Abuse, Victims of Crime, Young Adults
Identifiers—Defense Mechanisms, *Denial (Psychology)

In late adolescence and early adulthood, an ideally developing woman learns to cope with the world outside her family of origin and acquires a sense of identity that is stable and largely positive. Individuals with severe early trauma may have difficulty completing adolescence. Incest is one childhood trauma that can either be mastered in late adolescence or carried into adulthood with the potential for creating disturbances. Late adolescence-early adulthood would appear to be the age when incest victims are least likely to seek psychotherapy, instead relying on repression or suppression to cope with the incest experience. Incest victims may also use avoidance, acting out, and denial mechanisms and may resort to drugs and alcohol. Interpersonal crises during late adolescence may cause victims to be briefly shaken out of their denial stance. Case studies of incest victims in psychotherapy illustrate the use of denial mechanisms which were destined to break down. A victim may feel strongly attached to her mother, and at the same time, feel deeply ambivalent about her. The therapist must allow the client to work through her feelings about the mother-daughter relationship. Other themes that might be uncovered during psychotherapy include the repeated occurrence of intense romantic relationships which are ultimately destructive, and the repetition of rescue fantasies. Whether in group or individual therapy, the young incest victim needs a caring adult to relate to as she separates from her mother and revises her faulty identity formation. (NB)

**Counselor Self-Disclosure.**
Pub Date—Aug 85
Note—34p.; Paper presented at the Annual Convention of the American Psychological Association (93rd, Los Angeles, CA, August 23-27, 1985).
Pub Type— Information Analyses (070) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Client Characteristics (Human Services), *Counseling Techniques, Counselor Attitudes, *Counselor Characteristics, *Counselor Client Relationship, Individual Needs, *Interpersonal Communication, *Self Disclosure (Individuals)

The act of counselor self-disclosure has been regarded favorably by humanistic practitioners, while psychoanalytic figures have generally regarded the sharing of this type of information negatively. Counselor self-disclosure may be a useful means of eliciting reciprocal disclosure by the client or communicating that the counselor is willing to share therapeutic control with the client. In addition, self-disclosure can be used to help the client learn how he impacts on others and to normalize and support behaviors or feelings that the client may feel are unacceptable. By revealing information the counselor may be able to prime the client's expectations for changes; moreover, the counselor can manage the image he projects and derive personal benefit by discretely sharing aspects of himself. Different types of counselor disclosure can be identified in terms of their intimacy value, positive/negative value, and the degree to which the information is similar to the client's experience. Some types of counselor self-disclosure include demographic information, professional identity, world view, attitudes/beliefs, emotional responses, personal experiences, and counselor fantasies. The sharing of information by the counselor must be considered in light of the counselor's style, client expectations, and most importantly, the specific needs of the clients. (Author/NB)

Descriptors—*Behavior Modification, *College Students, *Contraception, Females, Higher Education, *Intervention, *Knowledge Level, Pregnancy, Prevention, *Sexuality, Social Action, Student Attitudes

Many teenagers have unplanned, unwanted pregnancies. Research has shown that effective contraceptive use is hampered by a lack of knowledge and by negative attitudes. Providing accurate information does not necessarily lead to contraceptive use. This two-phase study attempted to assess contraceptive behavior, knowledge, and beliefs. In the first phase, four studies asked university students (N=505) about sexual activity, methods of contraception, past contraception education, sexual partners, natural family planning, sexual behavior attitudes, and knowledge of sexual myths. Thirty to 60 percent of respondents reported being ineffective users or nonusers of contraception. Reasons for ineffective use or nonuse included lack of a steady partner and infrequency of sexual intercourse. In the second phase of the study, an intervention method was attempted. Experimental subjects (N=74) were undergraduate women students; control subjects (N=78) were students in a human sexuality course and psychology students. Experimental subjects participated in a workshop covering the topics of risk of pregnancy, types of contraceptive methods, and effective use of contraception. In the second part of the workshop, women participated in behavioral-rehearsal tasks. Comparisons with control groups showed participation in the treatment significantly improved contraceptive responsibility. The combination of didactic information exchange, increased communication skills through behavioral rehearsal, and motivation by behavioral contracting seemed to be an effective intervention. (ABL)

Descriptors—*Anorexia Nervosa, *Behavior Modification, *Counseling Effectiveness, *Counseling Techniques, *Holistic Approach, Psychological Patterns
Identifiers—*Lazarus (Arnold)

Anorexia nervosa has received considerable attention lately because of its increased incidence, potential danger, and resistance to treatment. A review of the literature on anorexia nervosa suggests that, although it is characterized by complex interrelated psychological and physiological processes, it is often conceptualized and treated in unifocal or unimodal terms. Even when more eclectic, multi-dimensional orientations are employed, they fail to provide a conceptual framework or a systematic approach. Perhaps for these reasons, treatment effects have been circumscribed and relapse rates high. The multimodal therapy model of Arnold Lazarus obviates many of the deficits cited, in offering a comprehensive, systematic, holistic approach to assessment and treatment. This multimodal approach focuses on the areas of behavior, affect, sensory, imagery, cognitive, interpersonal, and drugs. Therapy methods include identifying the triggering modalities, "bridging" the client from one modality to another, and tracking the intervening modalities. A multimodal case study employing the Lazarus method for an adolescent anorexic girl is discussed. (ABL)

**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*College Students, Evaluation, *Feedback, Higher Education, *Interpersonal Communication, Student Attitudes, *Student Motivation
Identifiers—*Criticism, *Negativism
Interpersonal feedback, telling an individual how others perceive and react to his performance or behavior, is often used in skills training to produce some change in the individual's performance. This study investigated the effects of different types of negative feedback on the subjects' ratings of the accuracy of the feedback and their motivation to change their behavior. Subjects were 48 male and 48 female college students who signed up for an experiment involving counseling skills. Two subjects, unacquainted and of the same sex, played roles of therapist and client in each session. One of three bogus, standardized feedback statements was given to the subjects after the session. Subjects rated the accuracy, desirability, and helpfulness of each item of feedback and the competence of the person giving the feedback. Therapist's and client's ratings of feedback accuracy and effectiveness were found to be similar, contradicting the idea that persons try to enhance their self-esteem. Clients rated feedback about observable behavior as more accurate than feedback about unobservable behavior. Individuals' reactions to negative behavior was influenced by several factors including the observability of behavior and the individual being evaluated. (ABL)

**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Counseling Techniques, *Delivery Systems, *Mental Health Programs, *Outreach Programs, Rural Environment, *Rural Population, *Rural Urban Differences
Rural outreach in community mental health centers involves staff commuting from a central agency to surrounding rural towns to provide clinical and/or community service. The problem for outreach staff is how to best provide services to a rural network that is distant and different from the urban network. In general the greater the distance, the fewer the interconnections between the rural community and the city. The amount of overlap between rural and urban networks affects the outreach worker's role. With fewer connections to the city, rural people depend more on the outreach worker's information about and referral to nonlocal services. Rural communities have distinct social networks characterized by close-knit families and homogeneous populations. Rural individuals expect more personal and informal mental health care and rely more on primary care physicians than do urbanites. Outreach workers must adapt to local procedures, evaluate services in light of the rural clientele, and effectively inform clients about local services. (ABL)

Descriptors—*Career Counseling, *Counseling Techniques, *Counselor Role, Foreign Countries, *Group Counseling, *Job Applicants, *Leadership Styles, Leadership Training
Identifiers—Canada
Structured, homogeneous group employment counseling is a process of group interaction where the functions of the group members are to make decisions, give each other assistance, and group teach. This type of counseling is appropriate for such groups as high school students or displaced homemakers. The concepts of situational leadership can be adapted to the skill training of the leader of a structured, task-oriented group. This situatonal leadership approach is based on the relationship among these factors: (1) the amount of direction (directive behavior) a leader gives; (2) the amount of support and encouragement (supportive behavior) a leader provides; and (3) the competence and commitment (developmental level) that a follower exhibits in performing a specific task. Many counselors have been occupationologists, others have been therapists. Job-seeking people need a group leader who can use a directing/coaching leadership style to help them develop new attitudes and methods for gaining employment. (ABL)

Descriptors—Counseling Techniques, *Counselor Training, Perspective Taking, *Psychotherapy, *Role Playing, Skill Development, *Teaching Methods, Workshops
Identifiers—*Hypnotherapy
A model has been developed for using role play in the supervision and training of hypnotherapy. Specific techniques can be role played by trainee and supervisor which can enable the trainee to develop skill and confidence in the use of hypnotic techniques. Hypnotic induction, listening, observing and providing feedback, relaxation, problem-solving, cognitive restructuring, and metaphor can all be role played, with the supervisor taking on the role of the hypnotherapist and the trainee taking on the role of the client. In addition, role play can be used to help the trainee to gain mastery of a new technique or to unblock the work with a particular patient. Role play also permits exploration of transference and countertransference. Finally, the trainee may use the role play experience to foster his/her own growth and development since role play constitutes in vivo experience. (Author/NB)

Few studies have been conducted which pertain to the consultation training backgrounds of psychologists and many questions remain unanswered. One study (Gallessich and Watterson, 1984) attempted to identify the current patterns of predoctoral education and training in consultation. Another study was undertaken to determine the extent to which these patterns of predoctoral consultation training are congruent with the opinions and actual practices of consulting psychologists. A survey assessing the availability and characteristics of consultation education and training from American Psychological Association (APA) accredited predoctoral training programs was completed by 332 program directors. A second survey, completed by 177 psychological consultants who were members of APA Division 13, Consulting Psychology, assessed the characteristic practices, training backgrounds, and salient concerns of consulting psychologists. A comparison of results from these two surveys revealed that there were many incongruences between predoctoral consultation training patterns and the recommendations of experienced consultants regarding training practices. The limited availability of formalized consultation training reported by program directors was in contrast to the strong endorsement by consultants that specialized preparation is needed for consultative effectiveness. There seemed to be agreement that the most important job of predoctoral training programs is to establish in their trainees a solid base of clinical skills which would underlie later consultation work. Descriptors—Adjustment (to Environment), *College Role, *Foreign Students, Higher Education, Student Attitudes, *Student Characteristics, *Student Needs, *Undergraduate Students

Higher educational institutions in the United States have reported increased enrollment of international students in recent years. The Institute of International Education projects that, by 1990, on million international students may be attending colleges and universities in the United States. A study was conducted to determine the needs, interests, and goals of undergraduate international students at the University of Maryland, College Park. Entering undergraduate international students (N=56) from Asia, Latin America, Africa, and the Mideast completed an anonymous questionnaire concerning their backgrounds, goals, perceptions, and attitudes regarding their education, vocational plans, social issues, and self-perceptions. The results suggest that the international undergraduate students come from diverse cultural backgrounds. The students sampled tended to be supported by family members, both economically and psychologically. Students reported feeling that meeting U.S. students and learning to think independently would be difficult adjustments. International students reported high hopes and expectations of success. Since many international students experience financial, personal, and interpersonal difficulties at U.S. institutions, appropriate support services should be provided in order to facilitate their adjustment to the United States. Descriptors—*Black Students, *College Environment, College Freshmen, Higher Education, Interpersonal Relationship, Racial Differences, *Racial Relations, Sex Differences, *Student Attitudes, *Student College Relationship, *White Students

If educators, counselors, and student personnel workers are to provide services to students which would be perceived positively by various racial groups, an understanding of interracial perceptions and attitudes is extremely important. A study was conducted to examine the current state of interracial attitudes among students at the University of Maryland in College Park, and to determine whether or not th ere have been any changes in interracial attitudes and perceptions among black and white students since the 1970's. An anonymous questionnaire on interracial attitudes was completed by 437 college freshmen. Twelve percent of the sample were black; 88 percent were white. In general, it was found that whites and blacks who had racially isolated backgrounds seemed to have similar interracial attitudes, while blacks who had racially mixed experiences held different attitudes regarding interracial contact. Subjects who had little interracial contact in their pasts tended to report that minorities were treated no differently by the university than were white students. Blacks who had more interracial contact believed that minorities were treated differently by the university than were whites, and these subjects were more likely than racially homogeneous blacks to feel that the university did not foster respect for cultural differences. These findings suggest that intraracial differences may be more variable than interracial differences. (NB)

Descriptors—Adults, *Age Differences, Attitudes, *Cross Cultural Studies, *Interpersonal Relationship, *Life Satisfaction, *Older Adults

Identifiers—*England, *United States

A study conducted in England (Goebel, 1982) showed that older English adults preferred middle-aged and older persons over young persons in important relationships. Since research has shown Americans to have negative attitudes toward the elderly, it was hypothesized that older Americans might not share the English sample's preferences. To examine this issue, the English study was replicated in the United States with 66 adults ranging in age from 60 to 89. Eight subjects sorted photographs into age and attractiveness categories. The photograph age range used in England (early 20s to early 70s) was extended to include old-olds (early 20s to late 80s). The remaining 58 subjects rated photographs of young, middle-aged, young-old, and old-old persons, controlled for sex and attractiveness. The results showed that both American and English samples preferred middle-aged and young-old over young persons, but that the Americans preferred old-olds least of all ages. For both groups, preferences were more pronounced for instrumental than for expressive relationships. The cross-cultural similarities obtained suggest that the age bias demonstrated by Americans against the old-old may have been a function of the expanded research design as opposed to cross-cultural differences. In America, young-old subjects were compared with old-old subjects, and subjects perceiving themselves as younger were compared with subjects perceiving their age accurately. Rating differences were found between both chronological and perceived age groups. (NB)

Descriptors—American Indians, Blacks, *Cross Cultural Studies, *Ethnic Groups, *Family (Sociological Unit), *Marital Satisfaction, *Parent Attitudes, *Values, Whites

Identifiers—Chicanos, Hmong

While healthy families and minority family systems are two areas of family research currently getting attention, little is known about what various ethnic families consider to be important traits of healthy families. To examine this issue and to assess family strengths and marital and parenting satisfaction for different ethnic samples, parents from four American ethnic groups (57 American Indians, 80 Hmong refugees, 105 Chicanos, 103 Blacks), and a white comparison group (N=210) were surveyed by questionnaire and by interview concerning those characteristics that promote a strong and healthy family. The results showed that the majority of parents across all ethnic groups considered a strong family to be one in which trust, support, and effective communication are present and in which a sense of right and wrong behavior are taught. Family members reported feeling responsibility for the welfare of each other, yet expressed respect for individuality and personal privacy. Strong families were reported to spend time together. Though not reported by the white parents, other ethnic parents valued financial security and respect for elders as additional sources of family strength. The parents also evaluated their own marital and parental satisfactions and their family strength. The white and Hmong parents reported the highest scores on all family measures, while the Indian parents had the lowest levels of family satisfaction. The interpretation of these results, however, is tentative because the validity of these family scales for ethnic parents has not been established. (NB)

Descriptors—Affective Measures, *Age Differences, *Child Rearing, Comparative Analysis, *Family (Sociological Unit), Family Financial Resources, *Family Structure, *Life Satisfaction, Parent Attitudes, *Quality of Life, Trend Analysis

Studies conducted in the 1960s (Aldous and Hill, 1969) examining the quality of life in families based on their affective and financial resources identified the childbearing stage and the stage when adolescents were present as especially stressful periods. Findings from the 1978 Quality of American Life survey (Campbell and Converse, 1980) were compared with results from these earlier studies using analogous quality of life indicators and dividing subjects into seven life cycle stages: (1) newly established marriages (N=143); (2) childbearing families (N=221); (3) families with school-aged children (N=309); (4) families with adolescents (N=181); (5) families with young adult children (N=306); (6) postparental families (N=300); and (7) aging families (N=178). The 1978 results were similar to earlier studies in that, on indicators of both sentimental and instrumental resources, older couples tended to be more content and persons in the childrearing years reported being statistically significantly less satisfied than other groups. The most striking difference between the results of the 1969 and the 1978 studies was the perception of 1978 couples in newly established marriages of fewer expressive and financial resources. This finding suggests that couples in new marriages who stay married and have children may lack the build-up of resources in this first stage that could buffer the loss of financial and sentimental assets in the child-present stages. A comparison of groups differing on occupation, gender, wife's employment, and the presence of husbands within stages helped to specify which groups were particularly liable to instrumental and expressive deficits and surpluses in which stages. References, tables and figures are attached. An appendix gives the operationalization of the study variables. (NB)

The text of a Senate hearing is presented in this document. In opening remarks, Senators William Roth and Sam Nunn discuss the serious nature of the problem of drug abuse and the crime it fosters. Margaret Heckler, Secretary of the Department of Health and Human Services gives testimony on the statistics of drug abuse, the activities of the National Institute on Drug Abuse, and anti-drug media campaigns. Gerald McRaney, costar of the TV show "Simon and Simon" and board director of the Entertainment Industries Council, testifies about media portrayal of drug abuse and the anti-drug activities of the Entertainment Industries Council. Susan Kendall Newman of the Scott Newman Center and Larry Stewart of the Caucus for Producers, Writers, and Directors testify about awards given to television programs portraying drug abuse accurately and about media efforts to do the same. Thomas Leahy of CBS Broadcast Group, Irwin Segelstein of the National Broacasting Company, and Alfred Schneider of the American Broadcasting Company testify about methods their companies use in reviewing programming regarding drug abuse. Descriptors—*Critical Thinking, *Curriculum Guides, *Decision Making Skills, Individual Power, *Obedience, Secondary Education, Secondary School Students, *Student Development
Identifiers—*Authority
This document is a curriculum guide on obedience to authority based on the assumption that informed, educated, thoughtful individuals are more likely to make intelligent decisions regarding obedience or disobedience to authority figures' requests than are uninformed individuals. The intent of this curriculum is to expose students to a small number of the variables that influence obedience to authority in the hope that this exposure will help them make intelligent decisions regarding obedience or disobedience to authority. Seven goals are described: (1) expose students to real life examples of obedience to authority; (2) expose students to experimental research on obedience to authority; (3) help students develop the capacity to think critically about authority; (4) help students recognize consequences of obedience to malevolent authority; (5) help students discriminate between just and unjust requests; (6) help students develop philosophies of obedience to authority; and (7) help students make intelligent decisions about obedience. Learning objectives, activities, and assignments are provided for each of the 6 days of the curriculum. Appendices include comprehension guides and a cause and effect pattern guide to the texts used in the curriculum; the in-class final examination; and an instruction sheet for a take-home personal philosophy paper. (ABL)

Descriptors—*Aggression, Competition, *Fantasy, *Letters (Correspondence), *Literature, *Psychological Patterns
Identifiers—*Biographical Analysis, *Twain (Mark)
Psychoanalysis, a favorite method for studying personality and motivation, cannot be used on the dead. Instead, biographical analysis must be employed. This study examines Mark Twain's aggression by analyzing his writings, social behavior, and environmental aspects of his life. In viewing Mark Twain's novels as representing fantasy, 17 categories of aggression are discernible. Mark Twain's letters to his wife, friends, and publishers may represent reality. Content analysis provides a quantitative measure of motivation of aggression. Three categories of motivation examined are self-aggression, moral outrage, and teasing. A comparison of Twain's fantasy and reality suggests that: (1) there is a dimension of overt versus non-overt aggression that provides a response hierarchy in which object-directed playful non-overt aggression is subordinate to serious overt aggression; (2) when the self is perceived as the frustrator, but there is constraint on the social expression of aggression, the aggression will be displaced in the form of self-aggressive fantasy; (3) when other persons or social institutions which have personal representatives are perceived as the frustrating agents, and there is serious constraint on social expression, the displacement will take the form, in fantasy, of moral outrage directed toward people in authority; and (4) when the frustrating circumstances are both implacable and relatively impersonal, constraint on expression of aggression will force its displacement into moral outrage and self-aggression in both fantasy and reality. Descriptors—*Adolescents, *Individual Needs, *Juvenile Courts, *Needs Assessment, *Policy Formation, Problems, *Social Services
Identifiers—Oregon
This document is an assessment of the service needs of one state's juvenile court wards written by a group of representatives of private and governmental agencies involved in working with children in the juvenile justice system. The group's goals were to generate accurate program and fiscal information about the juvenile justice and juvenile service systems in Oregon and to use this information to guide analyses of state policies and to develop policy recommendations. The document describes research design, sampling design, and census. Results of a needs assessment survey on a representative sample of juvenile court wards are discussed; questions investigated included the following: (1) characteristics of sample court wards; (2) problems in client profiles related to juvenile court status or referral history; (3) the child's past or present danger of abuse, neglect or exploitation; (4) treatment settings needed by the wards; (5) the need to remove a child from his own home; (6) needed services; and (7) other information availability. Suggested areas of future research conclude the report. The survey instruments are appended. (ABL)

Identifiers—*Felony Cases, Oregon
This document concerns the problem of juveniles arrested for or accused of serious criminal acts who are referred out of the juvenile justice system and into the adult criminal court system. The first section discusses the identification of the juvenile remand cases including their arrests, proportion of males, ethnic background, ages, and subsequent arrests. The second section discusses arrest dispositions and sentences and includes a comparison of juvenile and adult arrest outcomes, arrest disposition varying by type of charge or offense, probabilities of various sentences or penalties, and incarceration as part of the sentencing outcome. The last section discusses the research analysis of the identified juvenile remand cases including juveniles' place of residence, juvenile court involvement, most serious charge in prior juvenile court referrals, consequences of prior referrals, previous commitment to state training schools, factors involved in the decision to remand to adult system, and ages of remanded juveniles at earliest known juvenile court referral. Appendices include data forms and listing of key variables for arrests studied and tracked. (ABL)

Descriptors—*Foreign Students, Higher Education, *Sex Differences, Student Attitudes, *Student Needs, *Undergraduate Students
The number of international students on college campuses is increasing rapidly. It has been projected that as many as one million such students will be attending United States colleges and universities by the turn of the century. Most research on international students has been descriptive, has focused on problem areas, and has studied these students in general. This study explores differences in the needs and perceptions between male and female international undergraduate students. Incoming international undergraduate students (N=96) attending a required fall orientation at the University of Maryland, College Park, completed a questionnaire on their background, perceptions, and needs. Subjects included students from Asia (54%), the Middle East (20%), Europe (10%), Latin America (5%), Africa (4%), and other (6%). To investigate sex differences, 43 items related to perceptions and 25 items related to career and academic needs were analyzed using multivariate analysis. The results revealed that females expected to have a harder time than most students at the university and that they were more easily discouraged than were males. Males were more likely than females to see themselves as leaders and males also viewed themselves as acting more strongly on things they believed in than females. Females expressed a greater need to talk to a counselor for career planning, and indicated greater needs for improving note taking and classroom speaking than males. These results have implications for both program planning and research concerning international students. (ABL)

Descriptors—*Adolescents, Coping, *Prevention, *School Role, Secondary Education, *Secondary School Curriculum, *Suicide, Youth Problems
This document is a short summary of teenage suicide issues intended for use by teachers. Possible causes for teenage suicide are discussed, including: (1) chemical abuse; (2) unrealistic view of death; (3) the nuclear threat; (4) societal changes; (5) family changes; (6) lifestyle decisions; (7) academic pressures; and (8) the success code. Warning signs of potential suicide, a stress index for teenagers, and suggested measures for dealing with suicidal teenagers are discussed. Suggestions for a school curriculum which would prepare students to approach life with confidence are presented, including respecting life and people, coping and decision-making skills, and defining success as one's best effort. Resource agencies at national and community levels are listed. References are included. (ABL)

Descriptors—*Dropout Prevention, *Educational Finance, Financial Support, *Program Descriptions, *School District Spending, *State Aid, *State School District Relationship
Identifiers—*North Carolina
The purpose of this report is to identify the use of North Carolina's dropout prevention funds by local school systems and to define the types of services provided to students. Part I of the report contains a summary of funding by program type. A chart lists the total amount of funds obligated from state dropout prevention and other program sources to operate the different types of programs. Part II contains charts which list the amount of funds obligated to date, the types of programs supported by the funds, and the numbers of students receiving services. Part III provides a summary of individual program types, including objectives, approaches, evaluation procedures, and implementation data. Information in this section was obtained from surveys completed by the state's 141 local school systems. The program types described include in-school suspension, job placement, alternative school, extended school day, high-risk counseling, academic remediation, transition programs, and other programs. The state dropout prevention funds annual report form is appended. (NB)

Descriptors—*Adolescents, Alcoholic Beverages, *Alcoholism, Children, Curriculum Guides, Drinking, *Drug Abuse, Higher Education, Marijuana, *Medical School Faculty, Medical Students, *Pediatrics

This document provides two separate curriculum guides for pediatrics faculty to use in teaching medical students. The first section contains the alcohol abuse curriculum guide; the second section contains the drug abuse curriculum guide. The drug abuse guide concentrates on cannabis as a paradigm for all nonalcoholic drugs of abuse. Each guide includes an introduction and five chapters. Chapter 1 of each guide lists curriculum goals and objectives. Chapter 2 examines the pediatrician's role in the curriculum, focusing on subject matter, clinical skills, and attitude. Chapter 3 looks at several areas of core subject matter: history; epidemiology; definitions; biochemical, pharmacological, and physiological effects of alcohol (cannabis); psychological effects of alcohol (cannabis); psychological factors; and treatment. The alcohol abuse curriculum also contains a section on patterns of alcohol use in children and adolescents. Chapter 4 focuses on related drug issues. For the alcohol abuse curriculum, these issues include combined alcohol-polydrug use, management of acute intoxication and untoward reaction, the pregnant adolescent drinker, the fetal alcohol syndrome, and children of alcoholic parents. For the drug abuse curriculum, issues include multiple drug use, fetal drug syndromes, the drug-abusing mother, and management of untoward reactions and overdosage. Chapter 5 considers the problem of the student drinker (drug user). Both curricula conclude with several pages of references and appendices containing Attitudes and Opinions Questionnaires for students and annotated lists of curriculum material. (NB)

Descriptors—*Behavior Theories, *Cognitive Development, *Cognitive Processes, *Epistemology, *Learning Theories, *Psychology

Several epistemic formulations have been advanced to explain cognitive development. Many writers have divided the field of psychology into three basic underlying models: the mechanistic, organismic, and dialectic models. An examination of epistemic positions reveals five broadly defined positions on how behavior develops within a given organism. In position I, one can adhere to the notion that behavior and/or knowledge is innately inset. Within this position are the organismic viewpoints of Leibnitz, Gesell, and Descartes. In position II, the organizational elements necessary to a particular behavioral development are seen as either innately inset or as developing along epigenetic guidelines, while particular content displayed is seen as resulting from interaction with the external environment. Within position II are the organismic views of Kant and Piaget. Position III arises within the dialectical paradigm of Hegel and holds that factors intrinsic and extrinsic to the organism are necessary both to the organization and content of knowledge. Position IV, in the dialectical paradigm of Marx, holds that an active organism both generates changes in the structure and organization of the external environment and derives organization and content of its intellect from external sources. In position V, both form and content of behavior are derived passively from external sources, with some account being taken of the material realities as causal in the organism. This mechanistic view is found in more radical forms of behaviorism. (NB)

Descriptors—*Developmental Psychology, *Evaluation Criteria, *Feminism, *Individual Development, *Psychiatry, Theories
Identifiers—*Freud (Sigmund)

Neither Freud's original theories nor modern revisions of psychoanalytic theory serve women well. Because assumptions about the inherent inferiority of women are embedded at the core of the structure of psychoanalytic theory, the theory cannot be adequately revised for women. A new theory is needed which would serve women's interests better. Certain meta-assumptions which a feminist personality theory would likely include can provide a set of criteria by which a woman-based theory of personality and personality development could be evaluated. Such a theory should: (1) have clinical usefulness; (2) encompass the diversity and complexity of women and their lives; (3) view women positively and centrally; (4) arise from women's experiences; (5) remain close to the data of experience; (6) recognize that the internal world is inextricably intertwined with the external world; (7) not confine concepts by particularistic terminology or in terms of other theories; and (8) support feminist (or at least non-sexist) modes of psychotherapy. These criteria can be used to evaluate Freudian theory, contemporary psychoanalytic theory, and the theories of many feminists. Based on these criteria, Freudian psychoanalytic theory fails to meet the prerequisites for a feminist theory of personality. The feminist viewpoints of Nancy Chodorow, Jean Baker Miller, Luise Eichenbaum, Suzy Orbach, and Miriam Greenspan can all be evaluated by these criteria. It is difficult to develop a fully formed perspective on the psychological development of women that is psychodynamically based but which does not use psychoanalytic concepts, but it can and is being done. (NB)

This document contains witness testimonies and prepared statements from the Congressional hearing called to examine the issue of missing children and the initiatives taken by the private sector to help locate these children and return them to their homes. Opening statements by Senators Specter, Simon, McConnell, Metzenbaum, and Denton discuss federal legislation related to missing children and cite examples of private sector efforts. Witnesses include Jay Howell, the executive director of the National Center for Missing and Exploited Children; Ray Timothy, an official from the National Broadcasting Company; and Therese Rocco from the Pittsburgh Police Department. Also included are testimonies from three executives from the private sector who have assisted in the location of missing children. Executives from Wawa, Inc., Trailways Corporation, and V.G. Reed and Sons Printing describe the efforts of their companies in the area of locating missing children. Witnesses describe the nature of the missing children problem, the progress which has been made nationally, and efforts by the private sector whereby missing children's pictures have been put on milk cartons and posters in an effort to locate these children. Also discussed are some problems which have resulted from this focus of attention on missing children, such as the activities of charlatans and fraud artists who exploit the parents of missing children. Materials submitted for the record appear throughout the text and other relevant materials are appended. (NB)

Identifiers—Congress 99th, Homicide

This document contains witness testimonies from the Congressional hearing called to examine the issue of domestic violence and public health. Senator Hawkins' opening statement recognizes the work of Surgeon General C. Everett Koop in organizing a workshop of over 150 experts in the public health field to examine the problem of domestic violence. Dr. Koop's testimony reports the results of the Surgeon General's Workshop on Violence and Public Health. Recommendations from the working groups at the workshop are included for prevention and for evaluation and the treatment of victims in the areas of assault and homicide, child abuse, child sexual abuse, elder abuse, rape and sexual assault, and spouse abuse. Koop also discusses the role of educa-

tion in combating violence, the role of alcohol and drugs in violence, and the role of television in desensitizing the public to violence. Other witnesses include chairpersons of different sections of the Surgeon General's workshop. Lee Ann Hoff presents recommendations for the evaluation and treatment of victims of rape, Jean Goodwin examines the issue of child sexual abuse, and Douglas Sargent discusses the prevention of child abuse. Anne H. Flitcraft reports on the prevention of spouse abuse, Jordan I. Kosberg examines the issue of elder abuse, and John Waller discusses recommendations for the prevention of assault and homicide. Also included is a research study on knowledge and management strategies in incest cases which reports results of a survey of 108 physicians, psychologists, and family counselors. (NB)

Descriptors—*Adolescents, *Child Abuse, *Children, *Crime Prevention, Hearings, *Pornography, *Sexual Abuse, Victims of Crime

Identifiers—Congress 99th

This document contains witness testimonies and prepared statements from the Congressional hearing called to examine the plight of child victims of exploitation. The opening statement by Congresswoman Boggs outlines federal legislation and Congressional action regarding the exploitation of children. Representative McCain discusses legislation he has introduced which deals with child pornography. Kenneth V. Lanning, a special agent from the Behavioral Science Unit of the Federal Bureau of Investigation's Training Division, provides information concerning the law enforcement perspective of the problem of child victims of exploitation. Victoria Wagner, the executive director of the Seattle Youth and Community Services describes some of the youth who use her organization's services, how they get on the street, and what happens to them. Michael Jupp, executive director of Defense for Children International-U.S.A., discusses the commercial sexual exploitation of children. Thomas Berg, the director of clinical services with the Chesapeake Institute speaks to the perspective of the clinical or therapeutic side of the issue. Bruce Taylor, from the Citizens for Decency Through Law suggests ways to help solve the problem of child exploitation. Steven Finkelberg, a detective from the Washington, DC Metropolitan Police Department discusses his own experience in the ways children and young adolescents can be exploited for criminal purposes and what measures can be used to address the problem. Prepared statements from witnesses and committee members, letters, and supplemental materials appear throughout the text. (NB)

Descriptors—*Deinstitutionalization (of Disabled), *Mental Health, *Mental Health Programs, *Private Agencies, *Public Health, Responsibility

Identifiers—*Private Sector

Three revolutions in the history of mental health were identified by Nicholas Hobbs: the humane revolution, the scientific and therapeutic revolution, and the public health revolution. The shift of responsibilities for mental health and substance abuse services from the public to the private sector may constitute a fourth mental health revolution. The public-private issue can be viewed from two historical vantage points: developments in American medicine and specific developments within mental health. The reprivatization of medical care in America involves a change in type of ownership and control; horizontal integration; diversification and corporate restructuring; vertical integration; and industry concentration. In the field of mental health, recent developments have been toward reprivatization and deinstitutionalization. There are differing views on what values will be emphasized as a result of the reprivatization of mental health, but the reassessment of public and private responsibility should be pursued within the context of history. The sense of realism and caution that history demands should prevail as the public interest in mental health is sought. (NB)

Descriptors—Age Differences, *Aging (Individuals), *Cognitive Measurement, *Memory, *Sex Differences, *Test Validity, *Verbal Ability

Identifiers—*Rey Auditory Verbal Learning Test

Although the accuracy of the diagnosis of cognitive impairment in the elderly depends on the appropriateness of the norms for the neuropsychological tests used, the importance of examining health status, native intelligence, and gender when attempting to describe cognitive changes of aging has received little attention. The Rey Auditory Verbal Learning Test (RAVLT) is one widely used instrument for assessing memory dysfunction. The effects of age, education, verbal intelligence, and gender on the RAVLT were investigated in 114 healthy volunteers between the ages of 40 and 84 years. Subjects completed the RAVLT as part of a comprehensive neuropsychological evaluation. The vocabulary subtest from the Wechsler Adult Intelligence Scale was also administered. The results revealed that, in the best fitting regression model, verbal intelligence and gender accounted for a significant proportion of the variance in performance on every learning trial of the RAVLT. Age was only related to performance on the first two trials and education was not related to performance. Higher verbal intelligence was associated with better performance, and women consistently performed better than men. These results suggest that many tests reported to demonstrate an aging effect may actually only be reflecting heterogeneity in verbal intelligence and gender differences in the population studied. **Multi-Dimensional Therapeutic Intervention for Problemed Youth.**

Pub Date—Feb 86

Note—15p.; Best copy available.

Pub Type— Reports - General (140)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—Adolescents, Child Abuse, *Counseling Techniques, Crisis Intervention, Decision Making, Group Counseling, Individual Counseling, *Residential Programs, *Sexual Abuse, *Therapeutic Environment, Victims of Crime, *Youth Programs

Identifiers—*Behavior Management, *Multidimensional Approach

This report recognizes the problems faced by community-based placement as a result of deinstitutionalization of clients from rehabilitation and treatment centers for youth, and offers an alternative approach for serving these youth. The program described involves specialists in residential placement working with specialists in education/therapy work to provide a meaningful living and learning environment for youth. The Clearwater Youth Center/Fresh Start School at Eagle River, Wisconsin, is depicted as offering an intensive therapeutic milieu living and learning placement for youth who have been sexually abused and/or exploited. The three main components of the program are explained and the three basic goals of the whole placement sequence at Fresh Start are listed. A figure illustrating the eight dimensions of the program of therapeutic intervention at Fresh Start is followed by a discussion of each of the eight dimensions: (1) individual counseling; (2) one-to-one supportive relationships; (3) group counseling; (4) family meetings; (5) crisis intervention counseling; (6) behavior management systems; (7) consensus decision making groups; and (8) outdoor therapy. This multi-dimensional program of therapeutic intervention is advocated as a way of enhancing the growth, development, and adjustment of all youth-in-placement. (NB)

**From "Youth in Transition" to "Monitoring the Future": A Tale of Two Longitudinal Studies of Youth in the United States.**

Pub Date—17 Apr 86

Note—13p.; Paper presented at the Annual Meeting of the American Educational Research Association (70th, San Francisco, CA, April 16-20, 1986). Figures may be marginally reproducible due to small print.

Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—Adolescents, *Dropout Research, *Drug Use, Followup Studies, High Schools, *High School Seniors, *Longitudinal Studies, *Research Design, Research Methodology, *Trend Analysis, Young Adults

This paper uses a case history approach to present the evolution of two longitudinal studies, Youth in Transition, which involved 8 years of data collection (1966-1974) and Monitoring the Future, for which data collection began in 1975 and continues in the present. The Youth in Transition project is described as a study of the causes and consequences of dropping out of high school. Five key decisions about research design made during the program planning phase are discussed. Expansions of the project over an 8-year period are explained. It is noted that the Youth in Transition study laid the groundwork for the Monitorig the Future project and that the studies share similarities in content and methodology. Eight lessons which were learned from the Youth in Transition study and which affected plans for the Monitoring the Future project are listed. The Monitoring the Future project is described as an attempt to extend many of the trend analyses from the first study. Funding, initial data collection from 16,000 seniors in 125 high schools, and follow-up data collections are briefly presented. It is noted that one important product of this project has been extensive descriptive reporting of drug use levels and trends among high school seniors. A continuation of the collection, analysis, and reporting of these data is recommended, especially since the lengthening span of time makes the analyses richer with each new year of data collection. Descriptors—College Students, Higher Education, Interpersonal Communication, *Interpersonal Competence, *Measurement Techniques, *Rating Scales, *Sex Differences, Time

Identifiers—*Conversation, *Physical Attractiveness

The relationship between physical attractiveness and social competence is complex. A study was undertaken to assess the relationship between ratings of physical attractiveness and ratings of conversational skill. Sixty male and 60 female undergraduates viewed tapes depicting 18 heterosocial interactions. Subjects were asked to rate physical attractiveness, social competency, and their "desire to date" for each member of the opposite sex depicted on the tapes. One group of raters based their ratings on a brief 5-second exposure, while the remaining raters viewed the entire 3-minute interaction before rating attractiveness. The results indicated that for females' ratings of male attractiveness there was a significant stimulus subject by rating condition interaction. Socially competent males were deemed more attrative provided they were seen in action. Males' ratings of female attractiveness were relatively independent of rating condition. Overall, males attributed higher levels of social

competence to attractive females than females attributed to attractive males. This sex difference was minimal when behaviorally influenced attractiveness ratings were employed. These findings highlight the importance of considering the sex of the rater and ratee and the manner in which attractiveness ratings are obtained in studying the beauty-good relationship. Descriptors—*Age Differences, *Aging (Individuals), Change, *Developmental Psychology, *Individual Differences, *Teaching Methods
Identifiers—*Life Span Development
There is a vast body of literature devoted to an examination of life-span development. Several authors have described the characteristics of the life-span approach and have distinguished it from more traditional forms of psychology. Emphasis has been placed on the multidirectional and multidimensional nature of development and change, as well as on the multicausality of behaviors. The life-span approach has been characterized as focusing on basic issues in life-span developmental psychology, such as methodology and research design, cross-cultural and longitudinal studies, age-stage phenomena, and stability and change. In addition, this approach uses age divisions from infancy through late adulthood and emphasizes the developmental areas of physiology, cognition, language, perception, sex roles, and personality. The life-span approach brings a multidisciplinary perspective in its focus on different life stages with emphasis on change and continuity. This approach encapsulates a psychology of aging. When used in teaching a psychology of aging course, the life-span approach permits students to examine the complexities of development, to learn that there are no simple answers to complex questions, and to take responsibility for creating their futures. Such a perspective, while often difficult to communicate in teaching, is appropriate for the intellectually curious and for those able to live with ambiguity and uncertainty. (NB)

Identifiers—*Kansas
Recently, the need for increased career guidance and counseling services for high school students has been recognized. A major long-term commitment by school guidance programs must be made to assist students in setting career goals, planning education and work experience around those goals, developing effective work habits and interpersonal skills, and successfully completing their high school program. The Vocational Education Section of the Kansas State Department of Education has been gathering data and funding research activities on Kansas high school students, counselors, and counselor educators in order to determine how to strengthen vocational guidance and counseling. Results from a 1980 study revealed that : (1) secondary school guidance counselors had unclear role definitions; (2) the students, counselors, and counselor educators thought that more time was needed for counselors to be involved in vocational and career guidance activities with individuals and small groups; and (3) counselors wanted state leadership to support their efforts through workshops and technical and financial assistance. Other projects in Kansas involved inservices for counselors, surveys of students to identify their needs, and the use of the Career Planning Program. Through the continued cooperation of the state, counselors, and counselor educators, further progress in assisting students through career guidance appears feasible. An occasional report, "Career Planning for Secondary Students," by C. Henderson, is attached. (NB)

Descriptors—*College Students, Family Attitudes, Family Problems, *Family Relationship, *Females, Higher Education, Marital Satisfaction, Marriage, Married Students, Nontraditional Students, *Reentry Students, Role Conflict, *Social Support Groups, *Spouses
Increasing numbers of women are returning to college following an interruption of their education. Role strain is a common experience of these women. Most studies of role strain and family support among returning women have relied on the women's self-reports. A study was conducted using manipulated descriptions of family environments which were evaluated by 86 husbands of returning students. The results revealed that participants indicated greater support for the wife's education when she continued to meet all or part of her family's needs than when she neglected them. Further, husbands believed the woman who fit the "Super-Mom" stereotype was more likely to obtain an advanced degree. The husband was perceived to experience greater stress when his wife neglected her household responsibilities and when she reneged on her commitment to spend time with him. Participants also perceived the wife who neglected her family to be under more stress, possibly because they believed she should feel guilty. The results imply that a returning woman earns support for her education by continuing to meet her family's and husband's needs. (Author/ABL)

Descriptors—*Behavioral Objectives, *Educational Improvement, Elementary Secondary Education, *Learning Strategies, *Learning Theories, Postsecondary Education
Identifiers—*Behavior Analysis
Behavior analysis has contributed dramatically toward educational improvement. It has helped to produce impressive increases in rates and durability of simple and complex learning among students with widely disparate capabilities and levels of preparation. Behavior analysis has demonstrated that: (1) everyone can learn; (2) complex skills can be taught; (3) precise, general, and durable performance can be taught; (4) behavioral instruction can be cost effective; and (5) barriers to learning can be overcome. It has discovered ways to remove barriers to learning, such as inadequate student preparation or interfering behaviors. Its methodological rigor and the generality of its findings lend further support to the value of behavioral analysis for education. Nevertheless, many areas of concern remain to be addressed. Among others, these include the need for increased emphasis on both basic and applied research on learning and retention, and methods for promoting dissemination and utilization of effective behavioral instructional strategies. There may be several factors currently preventing the wide acceptance of behavioral methods. Many educators are unaware of or misinformed about the advantages of behavioral strategies. Even those who are aware of the benefits of behavioral strategies may lack the skill to implement them successfully. In addition, current contingencies impede or fail to support implementation of behavioral methods. Procedures are needed to inform educators about behavioral strategies, to shape behavioral skills, and to identify and manage various impediments and supports. An 11-page reference list is appended. Descriptors—*Dual Career Family, Employed Women, *Individual Power, *Marital Satisfaction, Marriage, *Mothers, *Sex Differences, Sex Role, Spouses, *Stress Variables
Identifiers—*Egalitarianism
Previous research has shown that among married couples, housewives experience the highest levels of psychological distress, employed husbands the least, and employed wives experience levels of stress somewhere in between. This study examines whether employed wives' symptomatology can be explained by the extent of their influence within the marriage relative to that of their husbands. Questionnaires which independently assessed husband's and wife's stresses were completed by 815 dual career couples. Questions measured educational and employment demographics, family and career satisfaction, allocation of domestic and decision making responsibilities, mental health symptomatology, and achievement concerns. Eighty-four percent of the subjects reported equal or almost equal relationships. For the most part, the more egalitarian the marriage, the greater was the wife's satisfaction with the marriage and the lower was her symptomatology. The exception to this was the finding that the greater the husband's responsibility for household tasks, the higher the level of the wife's symptomatology. Mothers tended to have less egalitarian marriages than wives without children. (ABL)

Descriptors—*Age Differences, *Family Relationship, *Generation Gap, *Grandchildren, *Grandparents, Parent Child Relationship, *Parents
Identifiers—*Intergenerational Analysis
Most American families consist of three or more generations. This study analyzes intergenerational relationships over time. In the past these relationships have been characterized in terms of a generation gap. In regard to this gap, this study seeks to compare and contrast perceptions of generational relations among grandparents, parents, and children; analyze how these perceptions change over time; and examine around what issues family members perceive generational conflict. Data for the analysis were part of a larger longitudinal study of three generation families over a period of time. Responses to a question about perceived gaps between generations were analyzed. Systematic differences between generations in their perceptions of the generation gap within the family were found. Grandparents saw less conflict within their families than did either children or grandchildren. Grandchildren reported the greatest distance between themselves and other family members. Qualitative responses reflected intergenerational disagreements over the meaning of work and finances. (ABL)

Descriptors—*Consultants, Consultation Programs, *Counselor Training, *Doctoral Degrees, *Educational Psychology, Higher Education, *Relevance (Education), *School Psychologists
Consultation describes a collaborative, indirect service that might address a variety of problems. The specific process used depends on the consultant's theoretical orientation. An academic consultation role has been proposed for the school psychologist in which he/she would function as an educational problem-solver who collaborates with teachers to make decisions regarding curriculum and educational program matters. Psychologists functioning in such a role would need skills in the process of consultation and would rely on educational psychology for content knowledge. This study evaluates whether or not school psychologists are trained in the process and content that would prepare them to do academic consultation and whether or not doctoral/nondoctoral differences exist in relevant training and actual practice. The results of a national survey of 151 training programs and 121 practitioners suggests that more doctoral than nondoctoral programs stress theory pertinent to academic consultation. Overall, however, few doctoral/nondoctoral differences in training and practice emerged. The results generally support the view that a number of training programs are not providing instruction in some of the areas basic to academic consultation. (Author/ABL)

**Follow-Up Research on Agoraphobics.**
Pub Date—Nov 85
Note—11p.; Paper presented at the Annual Meeting of the Association for Advancement of Behavior Therapy (Houston, TX, November 14-17, 1985).
Pub Type— Opinion Papers (120) — Speeches/ Meeting Papers (150)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Anxiety, Counseling Effectiveness, Counseling Techniques, *Holistic Approach, Life Style, Maintenance, *Marriage Counseling, *Problem Solving, *Relaxation Training
Identifiers—*Agoraphobia, *Relapse
In vivo exposure is the most commonly used and generally the most effective behavioral treatment for agoraphobia. Follow-up studies are difficult to interpret because additional treatment does not necessarily indicate relapse and non-treatment does not necessarily indicate non-relapse. Relapse rates are difficult to estimate because of lack of consensus on the definition of relapse. Relapse factors include reliance on anti-depressant medication and such measures of personality and psychopathology as marital status, locus of control, social anxiety, depression, and early compliance with treatment. Other variables are work satisfaction, negative thinking, socioeconomic status, and frequency of panic attacks. Maintenance of agoraphobics has been shown to be enhanced through the use of the following techniques: (1) marital therapy for disstressed couples; (2) maintenance homework including exposure and applied relaxation; and (3) panic reduction, especially methods not using medication such as reducing marital conflict and increasing problem solving skills. Finally, agoraphobics need to be encouraged to adopt a healthy life style and to be self-nurturing. (ABL)

**A Multidimensional Scaling (INDSCAL) Approach to Pain: Comparison of Cancer Patients and Healthy Volunteers.**
Spons Agency—National Inst. of Mental Health (DHHS), Rockville, MD.
Pub Date—Aug 85
Grant—MH30906-03; NIGM-26461
Note—15p.; Paper presented at the Annual Convention of the American Psychological Association (93rd, Los Angeles, CA, August 23-27, 1985).
Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Affective Measures, *Cancer, *Multidimensional Scaling, *Sensory Experience, *Stimuli
Identifiers—*Individual Differences Scaling, *Pain
Multidimensional scaling (MDS) offers a rigorous approach to many problems in perception, emotion, personality, and cognition, where the stimuli are too complex to be quantified by other means. In these procedures similarity ratings of the stimulus objects are modeled as points in multidimensional space, such that perceived similarity is represented by spatial proximity. The stimulus objects may be physical stimuli or words describing qualities of pain. In this study, Individual Differences Scaling (INDSCAL) was used to examine the dimensions of pain obtained from similarity judgments made to verbal descriptors of global pain by 16 patients suffering cancer-related pain and by 16 healthy volunteers. The INDSCAL analysis yielded similar two-dimensional solutions for both groups. The major dimension was magnitude of sensory pain: mild pain to intense pain. The second dimension, pain qualities, contained two components: a somatosensory attribute (e.g., burning) and an unpleasant affect attribute (e.g., miserable). The two groups differed in where they located certain descriptors in the space. For example, mild pain was more emotion laden for the cancer patients, but more of a somatosensory sensation for the healthy volunteers. Although much work remains to be done with a wider range of descriptors, it is clear that MDS procedures such as INDSCAL, have much to offer in the investigation of pain and other complex stimuli. (Author/ABL)

**Fear of Fear and the Anxiety Disorders.**
Pub Date—Nov 85
Note—9p.; Paper presented at the Annual Convention of the Association for Advancement of Behavior Therapy (Houston, TX, November 14-17, 1985).
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Anxiety, Counseling Effectiveness, *Counseling Techniques, *Fear, *Psychological Testing, Tests
Identifiers—*Agoraphobia, *Panic
The fear of fear present in agoraphobics can be broken down into a fear of the body sensations associated with the panic attacks that plague agoraphobics and maladaptive thoughts about the possible consequences of panic. In a retrospective examination of clinical files, 32 agoraphobic patients were compared to 36 patients with simple social phobias. Fear of fear was more often reported by the therapist for agoraphobics than for the other phobics. Two self-reporting measures were developed. The Agoraphobic Cognitions Questionnaire measures 14 maladaptive cognitions and the Body Sensations Questionnaire measures 17 sensations experienced during panic or high anxiety. These questionnaires were tested in 78 agoraphobics with panic attacks and 197 patients with other disorders including social phobia, generalized anxiety disorder, panic disorder, obsessive-compulsive disorder, and dysthmic and major depressive disorder. Additional data came from 23 normal subjects. Agoraphobics scored significantly higher on the Body Sensations Questionnaire and Agoraphobic Cognitions Questionnaire than did other subjects. Fear of fear may be related to treatment outcome for agoraphobic patients and imaginal exposure may be important in addressing fear of fear. (ABL)

Descriptors—*Adolescents, Child Advocacy, *Children, *Developing Nations, *Empathy, *Homeless People, *Policy Formation, Public Policy, Research Utilization, *Social Action
The dimensions of the social problem of street children in developing countries is being recognized and the need for social action is being addressed. The tone of recent policy papers, however, is one of sympathy rather than of empathy. This sympathetic stance is prone to distortion and misrepresentation and may result in social action which is shortsighted and counterproductive. The failure to achieve empathic understanding of street children has resulted in a focus on weakness and pathology, ignoring the signs of strength and resiliency these children also possess. The sympathetic posture of recent policy papers has falsely assumed a great deal of knowledge about street children. Misconceptions exist in the definitions of street children, in the language and perspective applied to street children, and in the etiology of the condition of street children. Overcoming the lack of knowledge about the problem of street children is fundamental to informed social policy. Advocacy and applied research both play important roles in social policy formation, but reasonable distinctions between the two must be maintained. Policymakers must rely on researchers, clinicians, and advocates alike to inform policy formulation, while recognizing that the approach of each requires careful scrutiny. (NB)

**Street Children: A Selected Bibliography.**
Pub Date—Dec 85
Note—21p.
Pub Type— Reference Materials - Bibliographies (131)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Adolescents, *Children, Films, *History, *Homeless People, *Latin Americans, *Literature, *Research
This document contains a bibliography of books, articles, and films which deal with the phenomenon of street children. The citations in this bibliography came from a literature search of several sources and from personal contacts with individuals who work with street children. Historical references, drawn primarily from North American and European sources, are included to provide some perspective and context for contemporary fieldworkers and researchers. This bibliography is intended as an experience-sharing resource for individuals who are working on behalf of street children and also as a resource for clinicians and academic researchers who are giving their attention to street children. Because of research conducted in Latin America, the bibliography contains references in both English and Spanish. A few references are included on street children in Asia. English language citations include 58 historical, 81 contemporary, and 7 literary references. Spanish and other language citations include 29 contemporary references and 1 literary reference. The bibliography concludes with a list of 11 references to films. (NB)

**Relationships between Cognition and Affect in Depressed Outpatients.**

Pub Date—Nov 85
Note—10p.; Paper presented at the Annual Convention of the American Psychological Association (93rd, Los Angeles, CA, August 23-27, 1985).
Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—*Affective Behavior, *Cognitive Processes, *Depression (Psychology), *Holidays, *Psychopathology, Relationship

Researchers and theorists have been discussing the relationship between cognition and affect for many years, contemplating whether or not thought is necessary to emotion. A study was undertaken to gain information about the relationship between cognition and affect with reference to psychopathology. To examine the relationship between cognitive distortion and change in depressed mood over time, data were collected from two samples of clinic outpatients. Fifteen outpatients who were being treated without medication for depressed mood were recruited from a community mental health center during the Christmas/New Year's period of 1983-84. Fourteen subjects came from a university clinical center during the Christmas/New Year's holiday of 1984-85. Both samples were administered pre-holiday, holiday, and post-holiday testings of Ellis' Irrational Beliefs, a measure of Beck's Cognitive Distortions, a Depression Scale, and the State Form of the State-Trait Anxiety Scale. No significant differences were found between the two samples on these measures, so they were treated as one sample. The results obtained suggest that no form of causal relationship exists between cognition and affect. The relationships found were similar to those obtained in the measurement of a multi-trait factor, and the hypothesis advanced is that both are aspects of a higher-order phenomenon. (NB)

**Validation of a Communication Process Measure for Coding Control in Counseling.**
Pub Date—Aug 85
Note—24p.; Paper presented at the Annual Convention of the American Psychological Association (93rd, Los Angeles, CA, August 23-27, 1985).
Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—*Communication Research, *Counseling, *Counselor Client Relationship, Individual Power, *Interpersonal Communication, Interpersonal Relationship, Measurement Objectives, *Measurement Techniques, *Observation

The increasingly popular view of the counseling process from an interactional perspective necessitates the development of new measurement instruments which are suitable to the study of the reciprocal interaction between people. The validity of the Relational Communication Coding System, an instrument which operationalizes the constructs of complementarity and symmetry in human communication processes, was directly assessed in a two-factor design. Undergraduates (N=242) who were divided into 10 groups listened to one of five audiotaped interactions. Subjects were told that the persons on the tape were either a husband and wife or a counselor and client. Each interaction was loaded with one type of symmetrical or complementary communication pattern. The effects of pattern, context (marital versus counseling), and their interaction on subjects' perceptions of the relationship control were examined. The results revealed that interactions loaded with certain types of relational control patterns were reliably distinguished by outside observers. The context of the interaction was found to have little effect on how well observers' perceptions of relational control reflected the actual coded communication. These findings generally support the use of the Relational Communication Control Coding System in counseling process research. (NB)

Since there has been little research in the area of children in long-term foster care, it is not clear how these children differ from those who successfuly move out of care. A study was undertaken to discover which factors account for the phenomenon of long-term foster care. Four organizations were involved: (1) private social services agency (research group); (2) State Department of Children and Youth Services (study population); (3) a university school of social work (project co-leadership); and (4) the state chapter of a national organization of volunteers (subject interviews). To involve policymakers in this project, the evaluators scheduled meetings with administrators of regional offices to receive their ideas, suggestions, and commitment that findings would be used in their policy decision-making. To involve state social workers in the projects, evaluators met the social workers face-to-face in friendly meetings, made the social workers' role an active rather than a passive one, solicited interview items of personal significance, attempted to instill curiosity about results, stressed previous successful projects completed together, and read a project endorsement statement from the social workers' central office. These efforts resulted in a project in which the workers, on the whole, were cooperative and gave thoughtful responses to the questions. (NB)

Identifiers—*Juvenile Justice

Drug law enforcement has become the number one criminal justice priority of the United States Department of Justice and is an area of great concern to those involved in the juvenile justice system. The new philosophy of juvenile justice holds juveniles responsible for their conduct, emphasizing an accountability or justice model which focuses on what the juvenile merits. This model incorporates proportionality, consistency, and predictability in an effort to provide fairness both to the juvenile and to society. Education is a second strategy being pursued in government efforts to control drug abuse which also focuses on individual responsibility. Education about the dangers of drug use will hopefully reduce the demand for drugs. While statistics on drug use trends show a decrease in marijuana and heroin use in recent years, the use of cocaine and the dangerous drugs of methamphetamine, PCP, and "designer drugs" has increased. In order to bring the drug problem under control, demand as well as supply must be addressed. The American government must move aggressively and pursue a drug education and prevention program that is both energetic and engaged. Administration efforts will be directed toward students from kindergarten through high school. While the responsibility lies with all citizens, it is especially important for state legislators to exercise moral and political leadership in the fight against drug abuse. (NB)

Identifiers—Caregivers, Congress 99th, *Gramm Rudman Hollings Balanced Budget Amendment

This document contains materials from a Congressional public forum which focused on multigenerational approaches to the health and economic problems of Americans. Introductory remarks are included from Fernando Torres-Gil, staff director of the House Select Committee on Aging; Victor Sidel, president of the American Public Health Association (APHA); and Pearl German, chairwoman of the APHA Gerontological Health Section. Anne Brushwood describes her experience of working to support her family while being the primary caregiver for three ailing relatives, and suggests ways of lessening the burden of care for families. Rosalie Kane, a University of Minnesota professor, discusses the interdependency of the aged and their families; the difficulties faced by families caring for a dependent elder; the impact of Medicare and Medicaid policies on the aged and their families; and priorities for reform. Jacob Clayman, chairman of the Leadership Council of Aging Organizations and president of the National Council of Senior Citizens describes how the health and financial needs of all Americans are interlocked and how actual budget cuts and those proposed under the

Gramm-Rudman-Hollings Amendment jeopardize health programs for the young, the old, and the poor. A committee analysis of the impact of the Gramm-Rudman-Hollings Amendment on programs for the aged, children, and poor, and a report on multi-generational equity being prepared by the Gerontological Society of America are appended. Descriptors—*Consumer Education, *Consumer Protection, *Costs, *Death, *Guidelines
Identifiers—Congress 99th, *Funerals
This Congressional consumer publication, done in conjunction with the Continental Association of Funeral and Memorial Societies, was written to help consumers have the type of funeral they want at a cost they can afford. Guidelines are provided which will educate the funeral consumer before and during funeral planning. Also included in this guide are the major provisions of the Federal Trade Commission (FTC) Funeral Industry Practices Trade Regulation Rule which was enacted to enable consumers to obtain itemized information when making funeral arrangements. Chapters deal with: (1) the importance of preplanning; (2) the FTC Funeral Rule; (3) consumer choices for funerals, direct disposition, memorial services, cremation, do-it-yourself plans; body/organ donations; and relative costs of alternatives; (4) memorial societies; (5) prepayment and possible alternatives to prepayment; (6) cemeteries; (7) death benefits, including Social Security benefits, Veterans Administration benefits, and other death benefits; (8) cautions; and (9) a form to complete for recording one's wishes concerning one's own funeral. The section on cautions contains a list of 12 consumer, licensing, and professional groups that consumers may contact for assistance or information on funeral matters. A bibliography is included. This report summarizes the findings of three studies related to the effects of schooling on the employability development of youth. The first two studies described investigate determinants of attitudes and misbehavior in high school that are presumed to affect labor market outcomes later. The third study is presented as a complement to the first two studies and examines the effects of misbehavior in school, attitudinal variables developed while in school, and school characteristics on employment experience after leaving high school. An executive summary and introductory chapter are included. Chapter 2 assesses the effects of an active school guidance program on the development of positive self-esteem, on a sense of agency (internal locus of control), and on the congruence among career aspirations and abilities. Chapter 3 reports a study of factors that account for mild forms of deviance in high school (truancy, tardiness, cutting class, coming to class unprepared, and droppping out of school). The fourth chapter summarizes findings regarding the effects of attitudes, deviance in high school, school services, and staff attitudes on wages, hours at work, and employment after high school. Thirteen tables and eight figures are included throughout the text. (Author/NB)

Descriptors—*Consultants, Counseling Services, *Counselor Attitudes, *Counselor Role, *Psychologists, *Role Perception
Psychologists have expanded their role by becoming consulting psychologists. New roles include assessment specialist, psychoeducational therapist, psychosituational assessor, curriculum developer, and program evaluator. A lack of consensus exists regarding norms for individual work situations. To investigate this issue, 177 randomly selected consulting psychology division members of the American Psychological Association were asked nine questions concerning their perceptions of ethical and role boundary issues. None of the items was perceived by the respondents to be highly appropriate. Functions reported to be of least importance were sharing confidential data, partisan involvement in organizational politics, and documenting evidence for firing employees. Functions considered most important were helping clients with problems unrelated to work, taking a therapist role with the client, making decisions as to what actions clients should take, and giving negative feedback to a client's employer. Limitations of the study include the low response rate (44 percent), possible newcomer bias, and an uneven response rate from different areas of psychology. Four pages of references are included. (ABL)

Identifiers—*Juvenile Justice
This document is a report of the Florida Department of Health and Rehabilitative Services on juvenile justice, education, and employment designed to present policy formation, identify major policy implications, document the extent to which former deficiencies have been remedied, and establish a policy foundation for future program development. The major findings of the report are described as the following: (1) current preventive efforts in the juvenile justice system are limited and there is little evidence that even these limited prevention programs are effective; (2) the single intake system has not increased diversion rates or lowered detention rates; (3) youth services have made enormous progress over the past several years in the development of community program alternatives to training schools; (4) educational resources, such as reading development, can greatly reduce or prevent juvenile crime; and (5) the creation of employment opportunities represents another resource for preventing delinquency. Identifiers—Florida, *Juvenile Justice
This document is a 1983 assessment of the Florida Juvenile Justice System based on an extensive analysis of the most recent statistical data and literature produced in Florida and several other states. The purpose of the report is to provide a preliminary overview of the impact of changes within the juvenile justice system and its relationship with other institutions and agencies. Policy recommendations are described in hopes of stimulating and focusing discussion on the course of the juvenile justice system. Cost effectiveness of juvenile justice programs including diversion, detention rates, and commitment programs are discussed. The juvenile population in the Department of Corrections is described. Conclusions and recommendations in the following areas are presented: (1) detention; (2) formal handling and diversion; (3) community programs and institutions; (4) serious offenders; (5) juvenile justice and the public schools; (6) employment, education, and training strategies for delinquent youth; (7) juveniles in the Department of Corrections; and (8) juvenile justice and the judicial process. Discussion is supported by statistical tables. Twenty-seven references are included. (ABL)

Descriptors—*Dating (Social), *Interpersonal Attraction, Interpersonal Relationship, *Life Style, Predictor Variables, *Sex Differences, Sex Role
One overlooked aspect of heterosocial skills is the selection of appropriate goal objects or partners. The tenet of interpersonal attraction that "like attracts like" suggests that individuals could maximize gains by avoiding dissimilar others. Recent findings suggest that variables relating to lifestyle and sensation seeking are more influential than traditionally investigated variables. A study was conducted to rigorously assess the impact of informational cues on dating choices while avoiding problems associated with post hoc analyses, simulated stranger designs, and heightened saliency effects. Forty-five females and 45 males role played customers at a videodating service. Target tapes included manipulated responses which were read off of cue cards by target subjects. Response alternatives were completely crossed with target subjects. Order effects were controlled through a Latin squares design. The results showed that females preferred males who espoused conservative views on premarital sex, alcohol, and marijuana use by a three to one margin. While also most responsive to lifestyle manipulations, valences of male rating changes were more evenly distributed. Target by manipulation interactions are attributed to swift elimination of some candidates. Cues generated were sorted into a hierarchical coding system. Category frequencies were differentially associated with sex of rater. Males cited appearance and sex role incongruency more frequently while females were more likely to cite interests, values and sense of humor. Six tables and a list of references are included. (Author/ABL)

Descriptors—*Age Differences, *Children, *Family (Sociological Unit), Perception, *Realism, *Television Research, Television Surveys, *Test Validity
Identifiers—*Reality Research
When children watch television, they can assess

the reality of what they are seeing. Content judged unreal may have less influence on viewers than does content judged real. This study examines children's reality judgments about television series featuring families with children. Participants included twenty-seven 7-year-olds, nineteen 11-year-olds, and nineteen 15-year-olds, with somewhat more girls than boys at each age. Measurement instruments included the Realism, Uses and Gratifications, Match Actual, Match Aspired, Television Literacy, and Viewing Frequency instruments. The children defined reality in reference to frequency among real-life American families so that characteristics of television families were judged more realistic when they were believed to be more common among real-life families. Children correctly recognized demographic differences among families and the lack of differences in portrayed feelings, actions, and general realism. Age of the child alone was never a determinant of adjudged reality. The lack of consistent, strong age effects may be due to the measures and methods employed. Further research should examine the mediating function of perceived realism in the television effects process. Four pages of references, five tables, and two figures are included. (ABL)

Descriptors—*Anorexia Nervosa, *Bulimia, Eating Habits, Emotional Disturbances, *Health Materials, High Risk Persons, *Information Needs, *Needs Assessment, *Public Opinion, *Resource Materials

Prevention and early intervention in cases of anorexia and bulimia require that both professionals and the general public have knowledge about these eating disorders. A study was conducted to identify the questions about these disorders most often asked by the general public and to develop a guide to answer those questions for individuals of different ages and educational levels. The Eating Disorders Question Inventory, developed to allow respondents to ask questions in 11 categories, was completed by 147 females and 63 males. In general, the respondents were well-educated, professional, either Catholic or Jewish, and very interested in acquiring specific information about the nature, etiology, effects, and prevention of anorexia nervosa and bulimia. The results indicated that respondents repeatedly asked questions about social, psychological, cultural, and economic pressures on families and individuals, and how those pressures might make certain groups or individuals more susceptible to the onset of anorexia, bulimia, or related eating disorders. This study culminated in the development of a guide, based on a set of working definitions of anorexia nervosa and bulimia detailed in the Diagnostic Statistical Manual of Mental Disorders III. A list of the 30 most frequently asked questions from the survey is included. (NB)

Identifiers—*Mathematical Aptitude

Psychologists and educators interested in factors that might influence mathematical ability have examined intelligence, motivation, and attitudes toward mathematics. More recently, sex role and cognitive style have entered the picture. The relationships among intelligence, field dependence, sex role, mathematics background, and mathematical ability were investigated in 66 male and 66 female college students. Subjects completed the Embedded Figures Test, the Bem Sex Role Inventory, and the Slosson Intelligence Test. Subjects were also administered a modified version of a mathematics test measuring ability with basic mathematics facts and word problems, ranging from simple addition and subtraction to first-level algebra. Subjects reported all mathematics and related courses taken since ninth grade. Although the number of mathematics courses previously taken and intelligence were found to be the two best predictors of mathematical ability, other variables were found to have indirect contributions. The results revealed that field dependence and sex role indirectly affected mathematical ability by influencing the number of mathematics courses taken. For both males and females, higher scores on the Bem femininity scale were associated with lower scores on the mathematics test and a fewer number of mathematics courses taken. Field-dependent students tended to have taken fewer elected mathematics courses than did field-independent students. These findings suggest that there are personality variables that lead students to avoid mathematics courses. (Author/NB)

Descriptors—*Cognitive Style, College Students, *Field Dependence Independence, Higher Education, Individual Differences, *Intelligence Quotient, *Mathematics Skills, *Sex Differences, *Sex Role
Identifiers—*Mathematical Aptitude

The field dependent-independent cognitive style has been noted by researchers to be related to mathematical achievement. Researchers have also noted a relationship between field dependence and measures of intelligence, and between sex and mathematical achievement. A multiple regression framework was used to examine the effects of field dependence, intelligence quotient (IQ), sex, and sex role on several types of mathematical ability for 33 female and 35 male college students. Subjects completed the Harris Test of Lateral Dominance, the Embedded Figures Test, Bem Sex Role Inventory, and the Slosson Intelligence Test. Subjects were also administered a mathematics test measuring ability with basic mathematics facts and word problems, ranging from simple addition and subtraction to first-level algebra. Field dependence was found to correlate significantly with both IQ and some mathematical abilities. Regression analyses revealed that although IQ was the single best predictor of mathematical ability, field dependence and self-reported masculine sex role were also significant predictors. Males and females did not differ in mathematical ability. These findings suggest that biological sex may not be as predictive of mathematical ability as perceived sex role. Based on results of this study, it would appear that classroom practices designed to match mathematics instruction to students' cognitive styles may prove useful. (NB)

Descriptors—*Aging (Individuals), *Coping, *Counseling Theories, *Older Adults, *Religion, Self Concept, Social Networks, Social Support Groups

Counseling psychology has neglected elderly adults. Developmental transitions from gainful employment to retirement or from active parenthood to former parenthood can be difficult. For older adults, religion can be a useful means for organizing the self-concept and developing a context of meaning for one's life in an effective way. Religion can contribute a framework for understanding one's life pattern and present situation. Religion entails a set of goals toward which the elderly person can continue to move and from which he or she can derive hope. Religion provides a supportive social network through a sense of shared beliefs which can aid an elderly person in combating isolation and loneliness. The psychological frameworks of Erik Erikson's developmental stages, Ezra Stotland's psychology of hope, and the recent view of integration of cognitive, social, and psychological factors provide an approach to understanding the role of religion for the elderly adult. A research approach investigating the antecedent relation of religion and related variables to patterns of coping in the elderly is needed. (ABL)

**Secondary Reading in Wichita: Guidebook. Revised.**
Wichita Public Schools, KS. Curriculum Services Div.
Pub Date—85
Note—177p.; Prepared by the Committee of Secondary Reading Specalists.
Available from—Wichita School District #259, Community Education Center, 1847 North Chautauqua, Wichita, KS 67214 ($7.00).
Pub Type— Guides - Classroom - Teacher (052)
**EDRS Price - MF01/PC08 Plus Postage.**
Descriptors—Administrator Role, *Content Area Reading, *Course Content, Course Descriptions, *Educational Media, Educational Objectives, Program Descriptions, Reading Comprehension, Reading Improvement, *Reading Instruction, Secondary Education, Student Role, Teacher Role, Vocabulary Development

In response to the need for improvement of reading instruction, a committee of secondary reading specialists developed this guidebook, which allows for three distinct levels of usage: as a curriculum guide for administrators and counselors, offering expanded course descriptions of all reading classes offered at the secondary level; as a reference and resource guide for reading specialists; and as a guidebook for content area teachers. The guidebook is divided into the following sections: (1) what is known about secondary reading; (2) goals and objectives of secondary reading; (3) parameters of the secondary reading program; (4) secondary reading course descriptions; (5) roles of the administrator, student, parent, and secondary reading specialist; (6) aids for the secondary reading specialist, such as class record sheet and prospective student forms; (7) content area reading–reading achievement levels, assessment, directed reading lesson, vocabulary development, reading comprehension, and study skills; (8) aids for the content area teacher, such as reading inventories, class profiles, and questioning techniques; and (9) aids for the student, such as test taking skills. A five-page bibliography is included, and appendixes contain the San Diego Quick Assessment, the Fry readability graph, and the cloze procedure. (HOD)

**The Shared Knowledge of Reading and Writing.**
Pub Date—[84]
Note—14p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Cognitive Processes, *Educational Research, Elementary Education, Grade 2, Grade 5, *Knowledge Level, *Measures (Individuals), Memory, *Metacognition, Phonics, Reading Comprehension, *Reading Writing Relationship, Sentence Structure, Syntax, Vocabulary Development

To determine whether reading and writing are as closely related as commonly supposed, a study estimated the amount of overlap that exists between several components of reading and writing knowledge. Data were obtained from 256 second graders and 251 fifth graders. Reading measures included tests of phonics (word knowledge), vocabulary (lexical knowledge), sentence comprehension (syntactic knowledge), and passage comprehension (organizational or structural knowledge). Writing measures included assessments of spelling ability (word knowledge), vocabulary diversity (lexical knowledge), sentence structure complexity (syntactic knowledge), and story grammar structure (organizational or structural knowledge). In all, there were eight writing measures and four reading measures.

Each measure was used as a dependent variable in a separate multiple regression analysis. Results did not support the idea that reading and writing are identical in terms of underlying knowledge. The correlations between the reading and writing variables were significant, but they were much lower than would be expected given the assumptions regarding the relationship between reading and writing. **The Improving Professionalization of College Adult Reading.**
Pub Date—[86]
Note—23p.
Pub Type— Opinion Papers (120)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Adult Basic Education, Adult Education, *Adult Literacy, Adult Reading Programs, Adult Students, College Faculty, Community Colleges, Community Education, Computer Assisted Instruction, Continuing Education, *Professional Development, Program Evaluation, Reading Diagnosis, *Reading Instruction

Although college adult developmental reading does not enjoy the status of mainstream academic fields, it has made substantial progress toward that goal in the past three decades. Characteristics differentiating it from academic fields are its generalist orientation, its isolation from other disciplines, and its emphasis on practitioners as helpers, rather than as information specialists. It is apparent that new directions are being explored in the areas of diagnosis, materials development, and computer assisted instruction. To continue this trend, college-adult reading professionals need to develop an interdisciplinary perspective of adult reading and to provide services to their students that will enable them to meet the demand for the increasing literacy requirements of an information society. Six pages of references conclude the report. (LLZ)

Descriptors—Classroom Techniques, *Content Area Reading, Elementary Education, *Individualized Instruction, Mastery Learning, *Peer Relationship, Reading Improvement, *Reading Instruction, Sciences, *Teaching Methods
Identifiers—*Reading Experiences Associated with Partners

The Reading Experiences Associated with Partners (REAP) approach to science combines reading process and product. Students work together sharing their ideas, interests, and knowledge. Results are recorded, and every effort is made to arrange the classrom so that it will aid students in meeting the task objectives. Children can be paired with a peer with whom they like to work, one who possesses similar prerequisite science skills, or one of similar or different ethnic background. Teachers act as guides, stimulators, facilitators, and questioners, as they move smoothly from pair to pair. Paired students select reading activities from a set of approximately ten task cards related to a particular reading concept, and must successfully complete eight of the ten tasks in order to fulfill competency in that area. Each task card contains an aim (give students directive purpose), an activity (a basic reading assignment that all students should successfully complete), and a challenge (an optional enrichment assignment). The REAP approach is fun, effective, inexpensive, and an option for the teacher who is concerned with providing as much individual assistance as possible. (HTH)

Noting that coupling stories and trains is an arrangement that appeals to nearly everyone and that building on this foundation provides an excellent theme for summer reading fun, this planning and activity guide offers suggestions to help librarians develop a highly motivating summer reading program. The first section of the guide discusses establishing an effective publicity campaign. The remaining sections of the guide present resources and activities for the program as follows: (1) bibliographies of materials about trains; (2) sources and resources for railroad information and collectibles; (3) railroad stories to tell (including "mad libs," flannel board stories, and railroad songs); (4) puppets and puppet theatre; (5) bulletin boards and displays; (6) crafts and activities; (7) games and contests; (8) puzzles; and (9) special programs and culminating activities. Descriptors—*Degrees (Academic), *Educational Needs, *Education Majors, Higher Education, Program Descriptions, *Reading Instruction, Reading Teachers, *Undergraduate Study

Reading represents the single most important tool for teaching students "how to learn" across the curriculum, and the time has come to encourage widespread development of undergraduate reading degree programs for future teachers. Ten years ago, Eastern Washington University began offering Reading Education as an undergraduate major for elementary teaching candidates and as a minor for secondary teaching candidates. Reading majors are required to take 37 credit hours in various specialized areas, such as children's literature or reading in the content areas. This coursework, offered sequentially and developmentally, gives teaching candidates the opportunity to learn theory, conduct research, and apply coursework to actual classroom situations. At the end of the three years, students are competent in (1) identifying student abilities, (2) textbook analysis, (3) alternative teaching methods, (4) differentiated assignments, (5) small group activities, and (6) instructional and learning theory. Because their knowledge transcends content areas, elementary teachers prepared to teach reading are also perceived as instructional leaders by many schools and districts. Despite a trend toward district and state guidelines and a requisite loss of teacher authority in the classroom, schools of education should not be dissuaded from considering the development of an undergraduate reading major. Identifiers—New York (New York)

The New York City Board of Education's Comprehensive Instructional Management Systems-Communication Arts (CIMS-CA) project is described in this report. The introductory section provides background information on the project (implemented in 1980), the primary goal of which was to develop a holistic communication arts curriculum for kindergarten through grade eight, a corresponding test component, and a computer management system. This section also describes the program objectives for 1984-85, including continued implementation of curriculum and staff development, and developing pilot assessment instruments. The remainder of the report describes the 1984-85 evaluation of the CIMS-CA project, to document the level and quality of program implementation and to assess the program's impact on student achievement in reading and writing. The second section describes the program's components, including administration, instrument development, and staff development activities. The third section presents reactions to and perceptions of the program's instructional component, including effectiveness and weaknesses. The fourth section presents the methodology and results of the student reading and writing evaluation, which indicated improvement in both areas over the course of the year. The final section presents several conclusions based on analysis of program data, with recommendations to continue (1) monitoring dissemination efforts of the program for quality control, (2) providing staff development, (3) monitoring and revising tests, and (4) evaluating and revising curricula. **National Assessment of Educational Progress Reading Proficiency Catholic School Results and National Averages. 1983-84 Final Report.**
National Catholic Educational Association, Washington, D.C.
Pub Date—85
Note—39p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—*Catholic Schools, Comparative Analysis, *Educational Assessment, Elementary Secondary Education, National Competency Tests, National Norms, *Reading Achievement
Identifiers—*National Assessment of Educational Progress

Intended to enable Catholic educators to evaluate the reading progress of their students compared to the nation as a whole, this report presents reading achievement data for nearly 6,000 Catholic school students out of 20,000 students in grades 4, 8, and 11, assessed in 1983-84 by the National Assessment of Educational Progress (NAEP). The findings are divided into three sections. Each section presents comparisons of Catholic school student performance with the respective national average and focuses on the following characteristics: (1) findings that compare students by subgroupings related to family background and social status; (2) findings that relate to characteristics of the schools (e.g., their locations and certain information about their curricula); and (3) findings that relate to behaviors associated with academic performance (i.e., homework, television watching, student grades, and some course-enrollment information for 11th graders). Identifiers—Gray (William S), International Reading Association

Four responses to speeches regarding William S. Gray presented at the May 9, 1985, Annual Convention of the International Reading Association (IRA) are presented in this paper. Gray--whose accomplishments include his association with the University of Chicago from 1912 (student) to his death in 1960 (Professor Emeritus); his pioneering work in the use of standardized reading tests, diagnostic theory, and remedial procedures; his promotion of adult reading and content area reading as subspecialties of reading; and the famous Scott Foresman Dick and Jane basal readers--is remembered by Nancy Larrick, Ralph C. Staiger, Theodore L. Harris, and Albert J. Harris. Larrick speaks of her affiliation with Gray during the formative years of the IRA and gratefully acknowledges his sensitive and gracious guidance, without which there would have been no IRA. Staiger mentions Gray's vast

intellectual and physical energy, his humility and his generosity with his time, money, and expertise. T.L. Harris discusses Gray's work in the area of reading research, mentioning his interest in maintaining a close connection between theory and practice, his sense of history, and the seriousness of purpose he brought to the field due to his methodological, objective, and scholarly approach. A. J. Harris comments that Gray influenced many serious students of reading beyond Illinois through his comprehensive scholarship and intellectual leadership. (LLZ)

Descriptors—*Computer Assisted Instruction, Computer Managed Instruction, *Computer Software, *Expert Systems, *Reading Diagnosis, *Reading Instruction, Reading Research, Teaching Methods, Technological Advancement

The expert systems are designed to imitate the reasoning of a human expert in a content area field. Designed to be advisors, these software systems combine the content area knowledge and decision-making ability of an expert with the user's understanding and knowledge of particular circumstances. The reading diagnosis system, the RD2P System (Reading Difficulties–Diagnosis and Prescription) based on an expert system shell, guides teachers to an understanding of the possible problems underlying a student's reading difficulties and suggests possible instructional methods to solve those problems. Advantages of the expert systems are that they (1) allow an organization to place untrained staff in key decision-making positions, (2) free professionals from information processing overload so that they can provide services that only humans can offer, (3) bring the best and most expensive of expertise to bear on a problem, (4) are designed so as not to overlook remote possibilities, (5) can be easily updated as new knowledge becomes available, (6) can be used for teaching purposes, and (7) raise questions about the field of expertise and can pinpoint areas where additional research is needed. (Teacher observation data are appended.) (EL)

Identifiers—*Invented Spelling

Spelling practices, processes, and implications can be analyzed in terms of three conceptual models: the bottom up, the top down, and the interactive compensatory model. Spelling instruction from post-colonial America into the 20th century reveals a preoccupation with the bottom up philosophy, which emphasized rules, word lists, and rote memorization. By the 1950s linguists contended that the majority of words used in writing are regular and consistent in their spelling patterns. Based on the significance of invented spelling, spelling began to be evaluated in developmental stages–prereading, phonetic, orthographic, morphemic and syntactic–which suggest the top down view. This view represents the psychological shift of control to the child (internal) and away from external controls (print, and authority of parent and teacher). The interactive compensatory approach combines both bottom up and top down views and–with its belief in the simultaneous use of phonological information and higher level processing skills–is best represented by the work of Uta Frith and A. F. Jorm. In their observations of the writing practices of preschoolers, C. Read and C. Chomsky concluded that parental acceptance of children's invented spelling is very important as an initial stage in the developmental process of learning to read and write. In school, wide reading and creative writing experiences are the best preparation for improving spelling skills. Spelling is an integral part of the literacy process and should be taught as such in conjunction with real writing and reading lessons. (EL)

Descriptors—*Adolescent Literature, Behavior Development, *Bibliotherapy, *Child Abuse, *Childrens Literature, Elementary Secondary Education, Identification (Psychology), Mental Health, Psychotherapy, Reader Response, *Reading Material Selection, Self Concept, *Sexual Abuse

Since children who have been abused much of their lives may be unaware that what is happening is unusual, it may be necessary for teachers to take the initiative in educating young children to recognize that abuse is not normal and to talk with someone if and when they realize they are a victim. This education can take place through the use of carefully selected books or bibliotherapy. Through literature, the child can first identify with the character or situation and by doing so can experience the situation vicariously, letting the child experience a catharsis or emotional release. The result of the identification and catharsis is an insight into the problem. Ideally, such an insight transfers to the child's own special set of circumstances. A teacher can help abused children choose appropriate books for their particular problems. Books can thus be one avenue to help children who are suffering from physical, psychological, and or sexual abuse realize that they are not alone, that someone else has experienced and understands their problem. Bibliotherapy may also alert a child to the fact that he or she is being abused and this does not have to be tolerated. (A four-page bibliography of narrative literature for children and adolescents on child abuse is appended.) (HOD)

A study investigated how text features influence the amount of vocabulary knowledge students acquired incidentally while reading expositions. Three sets of text features were identified from studies on comprehension: (1) features associated with the macrostructure, (2) features associated with logical and temporal relations in the microstructure, and (3) features associated with explanations of concepts and relations among them. Two natural expositions were revised in three successive, incremental steps, yielding four versions for each exposition. The most difficult words in each exposition were identified. Approximately 300 eighth grade students read one text version and completed a multiple choice test written to be sensitive to small gains in word knowledge. The results indicated that both able and less able readers who read text versions in which key concepts and the relations among them had been explained thoroughly learned significantly more word meanings than did students who read any of the other versions. Identifiers—*Full Day Programs, *Half Day Programs

Kindergarten children in three school districts were observed to measure the variance in their abilities upon entering school as well as the variance in the literacy-related instruction they received. The school districts differed in their early childhood education philosophies, as reflected in their kindergarten programs, their choices of materials, and the ways teachers grouped students. The primary goal of the classroom observation system was to measure the time teachers spent in various activities throughout a typical school day and to record sequentially each teacher-initiated instructional interaction, instructional interaction in terms of to whom it was directed, any feedback teachers gave to student responses, and the praise and corrective statement interactions that teachers initiated to manage their classes. Results showed that teachers of half-day kindergarten programs provided more literacy-related and content area instruction than did teachers of whole-day classes. This suggests that instead of focusing on whether school districts should move to whole-day instead of half-day kindergarten programs, it may be more important to study systematically not only what is actually happening in a variety of programs, but also the long-term effects of various kindergarten programs with an academic focus versus programs that are individualized for teachers and students. (Appendixes include selected pages from the reading materials used.) (HOD)

Descriptors—Academic Achievement, *College Freshmen, *College Preparation, Higher Education, High Schools, *Reading Achievement, *Secondary School Curriculum, Vocabulary Development

Noting the positive relationships between reading skills and academic performance, a study investigated the relationship between the reading skills of 172 freshmen in developmental reading courses and the number of college preparatory courses completed in high school. It was hypothesized that there would be a significantly positive relationship between comprehension and vocabulary scores and the frequency of college preparatory courses completed in high school. High school course credits

from transcripts for each subject were categorized into three subject areas: (1) communications and literary arts, (2) business and vocational arts, and (3) science and mathematics. Courses were further classified as core, general, or preparatory, based on state department of education criteria, and a count under classification was recorded for each student. The results did not appear to support the expectation or validate the underlying assumptions. Students with greater reading abilities were overrepresented among those with fewer college preparatory courses to their credit, based on correlational analysis. Since the study did not observe actual performance in courses taken in high school, the relationship between academic performance and reading ability, per se, can be neither confirmed nor rejected. Descriptors—Intermediate Grades, Metacognition, Reading Achievement, *Reading Comprehension, *Reading Instruction, *Reading Research, *Reading Strategies, *Remedial Reading, Teaching Methods

Forty 4th and 5th grade remedial reading students from two schools participated in a study that investigated whether providing remedial readers with information on the value of using a particular strategy would influence their self-efficacy and comprehension. In addition, the study explored the effects of emphasizing the general or the task-specific usefulness of the strategy. As part of a training program on main ideas, students in one condition received information that strategy use would benefit them on that task, students in a second condition were told that the strategy was useful on various reading tasks, and those in a third condition were given both types of information. Students in the controlled condition received the training, but no information about the importance of the strategy. Comparison of pretest and posttest data gathered by comprehension and self-efficacy measures revealed that providing students with both types of information resulted in the highest self-efficacy and skill, but that the treatments did not differentially affect achievement outcomes on a generalized task. Five pages of references conclude the document. (FL)

Identifiers—*Netherlands

From 1979 to 1985, data were gathered from approximately 600 students in 24 Dutch elementary schools to determine changes occurring in the interrelationships among the reading skill components of decoding, reading comprehension, and spelling ability. Information for each student was obtained from reading performance test scores recorded at the end of sixth grade. Results indicated that the decoding speed of students continued to develop over time, and that this reading skill component achieves a more independent status at the end of elementary education. Findings also showed that although the reading skill components were still correlated at the end of elementary school, the causal relationships among decoding speed and reading comprehension and spelling, respectively, seemed to lose a great deal of strength, whereas comprehension and spelling were more highly correlated. The best predictors of decoding speed and comprehension in sixth grade were the measures of the same reading skill components in the earlier grades. In addition, reading performance scores in the earlier grades played an important role in determining the level of secondary education for which the child was eligible. (FL)

Identifiers—*Main Idea

Intended to help classroom teachers, curriculum developers, and researchers, this book provides current information on theoretical and instructional aspects of main idea comprehension. Titles and authors are as follows: "The Confused World of Main Idea" (James W. Cunningham and David W. Moore); "The Comprehension of Important Information in Written Prose" (Peter N. Winograd and Connie A. Bridge); "What Do Expert Readers Do When the Main Idea Is Not Explicit?" (Peter P. Afflerbach and Peter H. Johnston); "Research and Instructional Development on Main Idea Skills" (Joanna P. Williams); "Actively Teaching Main Idea Skills" (Mark W. Aulls); "The Direct Instruction of Main Idea Comprehension Ability" (James F. Baumann); "Teaching Students Main Idea Comprehension: Alternatives to Repeated Exposures" (Victoria Chou Hare and Adelaide Bates Bingham); "Teaching Middle Grade Students to Summarize Content Textbook Material" (Barbara M. Taylor); "Graphic Organizers: Cuing Devices for Comprehending and Remembering Main Ideas" (Donna E. Alvermann); "Getting the Main Idea of the Main Idea: A Writing/Reading Process" (James Flood and Diane Lapp); and "Main Idea Instruction for Low Performers: A Direct Instruction Analysis" (Edward J. Kameenui). (EL)

Identifiers—Congress 99th, *United States

Consisting of testimony and prepared materials presented to a joint session of House and Senate subcommittees, this report deals with the problem of illiteracy in the United States. The report contains statements from Richard C. Anderson, director of the Center for the Study of Reading; Samuel L. Banks, president of the Association for the Study of Afro-American Life and History, Inc.; Herman Brown, professor of psychology at the University of the District of Columbia; Thomas G. Sticht, president of Applied Behavioral and Cognitive Sciences, Inc.; Woodrow Evans, adult education student; David P. Gardner, president of the University of California; Jonathan Kozol, author; Donald A. McCune, California State Department of Education; Renee Poussaint, reporter and volunteer tutor; Mrs. Elliot Richardson and Ruth Graves, representing Reading Is Fundamental; John C. Manning, president of the International Reading Association; Monika Sullivan, adult basic education student, and

Helen Whelan, coordinator and counselor at the Fairfax County Adult and Community Education program; Mrs. Sidney Savage, president of the Literacy Council of Northern Virginia; Representative Robin Tallon of South Carolina; William S. Woodside, chairman of the American Can Company; and Senator Edward Zorinsky of Nebraska. In addition, the report contains prepared statements from a number of witnesses from the business, education, and political communities, as well as supporting materials, including letters, newspaper articles, pamphlets, and journal articles. Identifiers—Sweden
A study was conducted to describe conceptions of the usefulness of reading (the function or "why" of reading) and conceptions of the reading process (the form or "how" of reading) among preschool and first grade children in Sweden. The research paradigm used–based on the work of Vygotsky and Piaget–was called the "second order perspective" and centered on how people describe different aspects of their surrounding world. Data were drawn from transcribed clinical individual interviews with 80 preschool children and a follow-up study of 53 children at the end of the first grade. The interviews with the first grade children were supplemented with reading rate, word comprehension, and reading comprehension tests. Results showed that the children described the function of reading in two qualitatively different ways: as a possibility (they see reading as useful for themselves) and as a demand (they see reading as something pressed upon them by others). The children described the process of reading in four different categories: contextual, textual, interactive, and body-related. Overall, the study found that children think a great deal about reading well before they have started school and acquired some reading competence. (FL)

Descriptors—Comparative Analysis, *Dyslexia, Grade 1, Grade 2, Grouping (Instructional Purposes), Primary Education, *Reading Achievement, Reading Diagnosis, *Reading Difficulties, *Reading Research, Special Education, Testing Problems, *Vision, Vision Tests, *Visual Perception
A study was conducted to determine if there were significant differences in vision between beginning readers who learn to read easily and those who learn with difficulty (dyslexics). In addition, the study examined the mean of the high achievers (rather than expert opinion) to discover the degree to which visual efficiency was normally needed for successful reading acquisition. Subjects were 144 students in the first and second grade classes in a Texas public school. Each child was individually tested at the end of the school year on 25 visual factors by an examiner who did not know the child's reading group placement. Results revealed significant differences in visual function between high and low reading achievers across grade, sex, age, and teacher effects. The mean scores of the high achievers were higher than those of the poor achievers on almost all measures, including binocular function (far-point vertical alignment, stereopsis, and fusion) and near-point visual acuity. Among the 19 first grade nonreaders, there were 18 cases of binocular problems and 17 cases of inadequate visual acuity–six times the number of visual problems found among the high achievers. The findings indicate that up to 95% of the reading disabled may be mislabeled, and that most of their difficulties could be prevented by a rigorous kindergarten or preschool visual screening and follow-up program. Descriptors—Cognitive Development, Cognitive Processes, Comprehension, *Content Area Reading, Critical Thinking, *Grade 8, Inferences, Junior High Schools, Language Arts, *Listening Comprehension, *Reading Comprehension, *Reading Research, *Social Studies
A study explored whether teaching the comprehension skills of inference, drawing conclusions, sequencing, and cause and effect would increase student achievement in reading and language while at the same time imparting social science content. Subjects, 197 eighth grade students in the experimental group and 192 eighth grade students in the control group, completed the Basic Skills Inventory (BSI) as a pretest. Teachers in the experimental classrooms were given inservice training in which they learned to infuse instruction in comprehension skills with content area instruction. Although teachers in control classrooms also received inservice training, they were allowed to select content related topics that did not address reading/language skills or instructional planning. All students again completed the BSI as a posttest at the conclusion of the project year. Analysis of the results showed that teachers who received training on teaching reading and language skills learned to prepare better instructional plans and that students in the experimental group achieved significantly higher gains than students in the control group. Descriptors—*Cognitive Processes, Higher Education, *Learning Processes, Learning Theories, *Paragraphs, Prose, Reading Ability, Reading Comprehension, *Reading Research, Study Skills
Identifiers—*Blooms Taxonomy, Prose Learning, *Summarization
A study investigated the relationship between high and low reading ability and the study techniques of reading, the usual method of note taking, and student-generated paragraph summaries on the six levels of cognitive learning from textual material as measured by Bloom's "Taxonomy." Subjects, 84 college students enrolled in an educational psychology course, participated in three experimental sessions. Students took the comprehension section of the Nelson-Denny Reading Test in order to assess their reading during the first session. In the second session, students received a packet of material also containing instructions for the study technique the student was to use, were given 30 minutes to learn the text, and were tested in a third session one week later. Students who wrote paragraph summaries scored higher than students who read or took notes at the application and analysis levels, although students who read or took notes scored higher at the syntheses and evaluation levels. The information-processing theory provides an explanation for this, since questions at the knowledge and comprehension levels require answering information in the same form in which it was provided. Therefore, it may be concluded that the use of paragraph summaries has a positive effect at some levels of learning. (DF)

Descriptors—American Indians, *Basal Reading, Blacks, *Content Analysis, Elementary Education, Ethnic Groups, Hispanic Americans, *Minority Groups, Racial Bias, *Reading Materials, Stereotypes, *Textbook Content, Textbook Evaluation, Textbook Research
A study was conducted to determine how well-balanced and accurately the largest ethnic minority groups are portrayed in major contemporary basal reader series. The amount of ethnic minority content by group and by basal series was investigated, as were the qualitative aspects of that content: the locale of the story, the socioeconomic class represented, the identities of the characters, the time period in which the story took place, and the life situation depicted. Blacks, Hispanics, and Native Americans were selected for study because they represent the three largest ethnic minorities nationwide. A multiethnic category was included to cover the many stories in basal readers that feature characters from more than one ethnic group. The components for grades one through six of nine major basal reader series published between 1979 and 1981 were chosen for examination, and 3,389 stories were reviewed. Results showed that the total percentage of content devoted to ethnic minority groups among the basal reader series was parallel with an industry-wide figure of about 18%. Qualitatively, the results indicated that the readers present a rather unrealistic picture of ethnic minority groups and race relations. However, basal readers in general have improved a great deal over the years in their treatment of ethnic minority groups. (DF)

Identifiers—Reading Motivation

Developing literacy in adults who speak English as a second language (ESL) means more than rote memorization of letters and sounds, because literacy implies a familiarity with the language and culture sufficient for comfortable interaction and communication of ideas to others. Literacy can be defined as (1) a matter of language, (2) having many human dimensions, (3) developmental, (4) something that is learned, (5) a cultural matter, and (6) a complex matter to communicate abstract ideas. Therefore, it seems that developing literacy through the use of well-written literature would be most appropriate. Good children's literature is particularly suitable for use in ESL classes because the expression of ideas is simpler in language and form than in literature written for adults. Works of literature that might be of use include Judith Viorst's "Alexander and the Terrible, Horrible, No Good Very Bad Day," "When Will I Read?" by Miriam Cohen, "A Letter to Amy" by Ezra Jack Keats, and "Mother Lost Her Job Today" by Judy Dalton. The selections have been chosen because they represent well-written literature and have well-developed characters in accurately described settings to give readers insight into language, customs, and culture. Descriptors—*Basal Reading, Cognitive Ability, Content Analysis, Elementary Education, *Graphic Arts, *Illustrations, Instructional Materials, Language Skills, *Reading Comprehension, Reading Processes, *Reading Research, *Textbooks, Visual Aids

A study was conducted to identify, describe, and analyze the visual displays accompanying instructional texts in basal reading series. Specifically, the study reviewed 1,884 displays from the student textbooks, major workbooks, and teachers' editions of six series used from grades four through eight to answer (1) descriptive questions about the location, original data source, specific knowledge domains, types, and formats of the displays; and (2) instructional questions about the purposes for completing a visual display task, the number and types of questions about displays given to students, whether instruction was provided along with the displays, whether characteristics of displays were taught, and whether enrichment activities were offered. The results suggest that while visual displays can be used to enhance higher order comprehension tasks, they most often do not in basal texts. Visual displays were more likely to be used for drill and practice or with specialized skills sections in students' workbooks. There was a paucity of higher level questions that required students to interpret and evaluate displays. (FL)

Descriptors—*Childrens Literature, Elementary Education, Ethics, Females, *Literature Appreciation, Males, *Moral Development, Moral Issues, *Moral Values, Personality Development, Reading Materials, Role Playing, Sex Differences, Social Cognition, Social Values, Teaching Methods
Identifiers—Moral Reasoning
Literature can be used in an elementary school curriculum to provide sound moral models for children. Through the exploration of moral problems and the adoption of the perspectives of others, children may begin to develop and refine their own morality. A male and a female morality may be identified in literature. The male morality–based on the ability to distance oneself for objectivity–results in moral imperatives, judgment, rights, rules, and hierarchies of values, while the female perspective of morality–grounded in networks of relationships–tends to result in a moral concern for the pain and suffering of others and in a recognition of one's responsibility to others. Although male morality is not necessarily a characteristic of the male sex and female morality is not necessarily a characteristic of the female sex, in American society they do tend to be sex-related. Some children's books that illustrate this female morality are "Charlotte's Web" by E. B. White, "The Girl Who Loved Wild Horses" by Paul Goble, and Mildred Taylor's "Roll of Thunder, Hear My Cry." In using literature to foster moral development in the classroom, teachers can take a number of steps, including (1) using books that offer an alternative to the usual male perspective on morality; (2) helping children compare alternative endings to certain traditional tales; (3) having children act on their reading by trying out possible alternative ways of interpreting a book, scene, situation, or character; and (4) sharing with children real-life role models who manifest in their lives a comprehensive morality. A three-page bibliography is included. (DF)

Descriptors—*Cognitive Processes, English, Higher Education, *Letters (Alphabet), *Orthographic Symbols, *Reading Research, Spelling, Visual Learning, *Word Frequency, *Word Recognition, Word Study Skills
Identifiers—*Orthographic Structure
A study assessed the role of orthographic structure in college students' perceptual recognition and judgment of letter strings. Lexical status, word frequency, bigram frequency, log bigram frequency, and regularity of letter sequencing were orthogonally varied across a series of experiments. Six-letter words and their anagrams were used as test stimuli in a target-search task. Results showed that words were recognized better than their corresponding equally well-structured anagrams, but that word frequency had little effect. Orthographically regular anagrams were recognized better than irregular anagrams, whereas log bigram frequency did not have an effect. In contrast, post hoc correlations revealed that log bigram frequency did correlate significantly with individual item performance. In a final experiment, subjects judged which of a pair of letter strings most resembled English in terms of either the frequency or the regularity of letter sequences. Findings revealed an influence of essentially the same dimensions of orthographic structure as that revealed by the perceptual recognition task. The overall results provided evidence for lexical status, regularity of letter sequencing, and frequency of letter sequencing as important dimensions in the psychologically real description of orthographic structure. Descriptors—*Context Clues, Higher Education, Language Usage, Mnemonics, *Reading Comprehension, *Reading Research, Recall (Psychology), Sentence Structure, Teaching Methods, *Vocabulary Development, *Vocabulary Skills
Identifiers—*Keyword Method (Language Learning)
Four experiments were conducted to determine how the keyword method of vocabulary instruction affects both subjects' comprehension of words encountered in sentences (experiments 1 and 2), and their ability to use words in appropriate sentences (experiments 3 and 4). In the first two experiments, college students were presented sentences containing previously presented words, and were asked to judge whether the words were correctly used in the sentences. In both experiments, some of the sentences made sense with the words and other sentences did not. In the second two experiments, college students placed the learned words in appropriate sentences. In the third experiment, correct usage was assessed by a modified cloze task, whereas in the fourth experiment it was assessed by subjects' construction of original sentences. Results supported previous research that showed the keyword method effective in facilitating students' recall of definitions, given words. In addition, this method was shown to increase comprehension of English vocabulary in context, as well as use of that vocabulary in a novel context. (HOD)

Descriptors—Cognitive Processes, Concept Formation, *Content Area Reading, *Language Processing, Learning Strategies, Memory, *Reading Comprehension, *Study Skills, Teaching Methods
Identifiers—*Glossing, *Smirnov (A A)
Because teachers are asking for specific suggestions to help students apply comprehension skills and read content material, a mechanism that assists students in acquiring and applying specific comprehension skills as they read content texts is being investigated. The mechanism is called marginal gloss because learning activities are placed in the margins of the text. Direction and support for developing marginal gloss have come from numerous areas of related research. One such area is A. A. Smirnov's work in memory development, in which Smirnov emphasized that the active involvement of the learner and active, meaningful, and varied repetition are important in learning from text. In addition, five activities were found to characterize effective learners: (1) developing a plan in which the material is divided into meaningful parts, (2) correlating new content with prior knowledge, (3) relating content from various parts of the text, (4) using imaging as a strategy for remembering, and (5) paraphrasing the content of texts in one's own words. Many students are not able to organize their activity or vary their repetition independently, so marginal gloss may provide a specific technique teachers can use to help students organize their learning and use positive repetition. A four-page list of references is included. (HTH)

Descriptors—Age Differences, Basal Reading, Child Development, Comparative Analysis, *Developmental Stages, Elementary Education, Grade 2, Grade 4, Grade 6, *Inferences, Learning Processes, Linguistic Theory, *Reading Comprehension, *Reading Processes, *Reading Research, Semantics, *Sentence Structure
Identifiers—Blachowicz (C Z)
A study examined the existence in elementary school children of (1) sentence constructivity, (2) developmental differences in constructivity, (3) differences in constructivity across performance levels, and (4) differences after a one- or two-day delay. The study was intended as a partial replication of work by C. Z. Blachowicz (1977-78), which demonstrated the phenomenon of sentence constructivity as part of reading comprehension among children. Subjects were 44 second grade, 54 fourth grade, and 50 sixth grade students from intact classes in a public school in Victoria, British Columbia. The students read a basal story and completed a sentence recognition task. The task required the students to indicate sentences that were literally identical to those in the story, but not those that simply meant the same thing. One or two days later, the recognition task was repeated without access to the story. Results were analyzed for sentence types, grade levels, performance levels, and trials (immediate or delayed). Findings indicated support for constructivity in sentence type analysis, a decrease in errors as grade levels increased, no difference across performance levels, and an increase in constructivity after a delay. The results confirm and extend Blachowicz's findings. A five-page bibliography is provided; appendixes include the story used, the recognition test and the raw data presented in tabular form. (FL)

**A Developmental Comparison of Three Theoretical Models of the Reading-Writing Relationship.**
Pub Date—Apr 86
Note—33p.; Paper presented at the Annual Meeting of the American Educational Research Association (70th, San Francisco, CA, April 16-20, 1986).

Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150)
EDRS Price - MF01/PC02 Plus Postage.
Descriptors—Comparative Analysis, Elementary Education, Grade 2, Grade 5, Integrated Activities, *Models, *Reading Achievement, *Reading Comprehension, *Reading Research, *Reading Writing Relationship, *Writing Research

A study compared and evaluated alternative theoretical models of the relationship of learning to read and learning to write at beginning and advanced levels of reading development. The reading dimensions of the three models included word analysis, vocabulary, and sentence and passage comprehension components. The writing dimensions included spelling, vocabulary, sentence structure, and story organization components. The models differed with respect to the sequential orderings of relationships of the dimensions. The interactive model permitted the use of reading knowledge in writing, as well as the reverse. The other models (reading-to-writing and writing-to-reading) allowed knowledge to move only in a single direction. These models were evaluated on their ability to account for the relationships found in an extensive body of reading and writing data collected from 69 beginning (second grade) and 137 proficient (fifth grade) readers. The findings suggested that the nature of the relationships changed as a result of learning, and that the interactive model fit the data better than the other models at both levels of achievement. **The Reading Interests of Emotionally Disturbed Boys Ages 11 to 15.**
Pub Date—May 86
Note—34p.; M.A. Thesis, Kean College of New Jersey.
Pub Type— Dissertations/Theses - Masters Theses (042) — Reports - Research (143)
EDRS Price - MF01/PC02 Plus Postage.
Descriptors—*Adolescents, Comparative Analysis, Elementary Secondary Education, *Emotional Disturbances, Emotional Problems, *Males, Personality Problems, Reader Response, Reading Attitudes, Reading Habits, *Reading Interests, *Reading Material Selection

A study investigated whether the reading preferences of emotionally disturbed boys were the same as the interests of boys in the general population. Subjects, 25 boys from a private residential treatment center for emotionally disturbed boys, were interviewed individually, completed a reading interest survey, and selected titles of books they would read. Responses were then tallied to determine the boys' favorite and least favorite books. Results suggest that the reading interests of emotionally disturbed boys, ages 11 to 15 are not the same as those identified by boys in the general population. However, some similarities do exist. The category of sports, which is highly rated by all populations of boys, was the number one interest of emotionally disturbed boys. Science was also a popular interest of all boys, while poetry was rated as being of low interest for all boys. Surprisingly, while adventure was a popular interest of both boys and girls in the general population, it scored very low on the survey of emotionally disturbed boys. Among the implications for teachers is that reading will be more appealing to emotionally disturbed boys if they are offered titles that excite and attract them. Tables, figures, and a three-page reference list are included. (DF)

Descriptors—*Associative Learning, Comparative Analysis, Higher Education, Language Processing, Learning Strategies, *Mnemonics, *Reading Research, *Recall (Psychology), *Semantics, Teaching Methods, *Vocabulary Development, Vocabulary Skills
Identifiers—*Keyword Method (Language Learning)

A study examined the efficacy of the keyword method of vocabulary instruction by comparing it with five methods designed to increase semantic processing of the definitions of the vocabulary words. Subjects in all five experiments were college students. In the first three experiments, recall of the definitions from the vocabulary words was the critical dependent measure, with the keyword method producing greater learning than any of the semantic-based or control conditions. Also, none of the semantic-based conditions facilitated definition recall, relative to a no-strategy control condition. In the fourth and fifth experiments, the keyword method, two semantic strategies, and the no-strategy control procedure were compared with respect to associative- and response-learning components of vocabulary learning. Results indicated the keyword method enhanced vocabulary/definition (associative) learning, but not definition (response) learning per se. In contrast, the semantic conditions tended to increase nonassociative learning of the definitions. The results support the case that the keyword method is a vocabulary-learning procedure superior to the semantic-based strategies advocated by reading theorists. (HOD)

Descriptors—Classroom Observation Techniques, Elementary Education, Influences, *Professional Development, *Reading Research, *Teacher Characteristics, Teacher Education, *Teacher Student Relationship, *Teaching Experience, *Time on Task

A study examined (1) whether students whose teachers possess a higher level of professional development exhibit greater time-on-task in reading than students whose teachers exhibit a lower level of professional development, and (2) if any specific aspects of teachers' professional development were related to a significantly greater amount of time-on-task in reading on the part of students. Data describing teachers' professional development were collected from 35 classroom teachers on personal data forms, while time-on-task data were collected by observing 200 individual students in four elementary schools at periodic intervals during the school year. Findings indicated there was no relationship between average student time-on-task in reading and four of the five aspects of teachers' professional development investigated. One variable, possession of a Master's degree, was negatively associated with student time-on-task at a statistically significant level. Finally, a significant negative correlation was found between years of teaching experience and student time-on-task, suggesting that as teachers acquire additional teaching experience their students exhibit a decrease in time-on-task in reading. (Tables of data and a five-page bibliography are included; among the appendixes are the classroom observation form, teacher personal data form, project guidelines, and teacher time allocation form.) Identifiers—*Dynamic Assessment

Psychological theories have long had a pronounced effect on the diagnosis and instruction of children with learning problems. Traditional theorists emphasized the centrality of global processes assumed to be common to most if not all cognitive tasks. These processes were quite distant from those involved in traditional academic activities, making it difficult to proceed from diagnosis to instruction. In contrast, contemporary theorists concentrate on identifying the specific knowledge and skills underlying performance in academically relevant fields such as reading, writing, mathematics, and science. This trend toward domain specificity has made the task of diagnosis and remediation of school problems more tractable, as the processes thus identified are those needed for successful performance. At the same time, alternative methods of diagnosis, such as dynamic assessment, have been developed to supplement more traditional approaches by assessing domain-specific processes in action, rather than inferring their operation from the products of prior learning. These advances make it easier to specify the processes that need to be the targets of instruction. Furthermore, current attempts to characterize optimal learning environments have fueled the development of a theory of instruction. (An 11-page bibliography is included.) (Author/HOD)

Descriptors—Basic Skills, Cognitive Processes, *Cognitive Style, Elementary Education, *Learning Strategies, *Neurological Organization, *Relaxation Training, *Teaching Methods, *Visualization

Educators are beginning to call attention to the failure to integrate right-brain, intuitive, holistic, visual processes into the curriculum. Approaches to right-brain education have characteristically called for the use of slow music, visual imagery, and relaxation techniques. Suggested principles for teaching basic skills include the facts that some learning best takes place when both the teacher and the children are relaxed, and that if the expected learning can be visualized inside the student's head, it will be better understood and retained. There are a variety of techniques to help students achieve a relaxed state, and a variety of techniques to help students become accustomed to visualizing in their minds. Suggested basic skills activities following relaxation include having the student visualize a blackboard and see each word appear as the teacher recites it or working multiplication problems on this imaginary blackboard as the teacher reads them; having students imagine themselves taking a test and being proud as they see themselves getting the answers correct and others telling them how well they did; and having students imagine what happened in a paragraph they just read from a reader or textbook, paying attention to what the people looked like or to the order in which events occurred. Descriptors—*Characterization, Educational Assessment, *Essay Tests, Instructional Material Evaluation, *Literature Appreciation, Reader Response, *Test Construction, Testing, Writing Evaluation

Noting that the predominant questions about characters in literature exams steer students away from reflection about the characters, this booklet on constructing exam questions analyzes current failures in character studies and reviews existing starting-points for an alternate approach. The firt section–on limiting assumptions in current character questions–discusses how wording misdirects response and the students' choices of the personal and impersonal stance, the informality/formality of the relation with the reader, and the degree of assertiveness/tentativeness. The second section–on emerging alternatives–discusses responses that start from the particulars of the characters, looks at key words and their implications and assumptions, and summarizes the kinds of guidance teachers should offer their students before they write their character sketches, in terms of writing from a personal stance, the role of the teacher as reader, dealing with the general and the particular, and keeping character assessments exploratory and tentative. Finally, the booklet discusses suggestions for working these ideas out in practice. (EL)

Identifiers—*Music Composers

From the close of the nineteenth century and into the early part of the twentieth century, three aural technologies–the telephone, the phonograph, and the radio–were rapidly disseminated throughout the United States. These technologies brought to the population more aural information than it had ever experienced and created a new environment of structured and meaningful sound. This environment led to a change in perception of sound by those most sensitive to cultural shifts in aural phenomena: the avant-garde composers. Major composers such as Stokowski, Varese, Chavez, and Taylor articulated significant dimensions of this shift with dramatic expressions of their own changing notions of sound, their personal reactions to the new media, and their hopes for an "aural awakening." They pointed to radio, the "new musical instrument," as a source of new relations to the world of sound which, suddenly, was "vastly freer." The aural media altered their notions of tonal relation and the very concept of "natural sound." Commentators claimed that the phonograph and radio were inaugurating a social musicalization of sound. With the cooperation of Bell Telephone Laboratories, Varese and Stokowski sought to use radio to extend to the absolute perceptual limit the public's awareness of all aural phenomena. (FL)

Identifiers—Bunker Hill Community College MA

Bunker Hill Community College in Boston, Massachusetts, supports a prodigious English as a Second Language (ESL) program, which attracts large numbers of Hispanics, Asian Americans, and other minority language groups. They are accepted in the program only after they have learned the basic "survival" skills in the various pre-ESL programs around the city. They spend from two to three semesters in the ESL program before they are eligible for entry into a mainstream program, which usually places them in English 101. This program uses computer assisted instruction because it is designed to teach students to like to write and deals with the tedious process of rewriting and editing, an enticing approach for students who have difficulty learning a new language. Using the available tutorials for the "Volkswriter" word processing software, a series of steps was designed to help students write a few paragraphs on IBM personal computers. Students spend three hours in class work plus two hours in the computer lab each week. Around the fifth week, they are ready to use the computer on their own. They are also required to spend at least one of their computer hours working on developmental software to improve their skill at recognizing sentence errors, improve their vocabulary, and develop reading skills. Time conflicts between students working on programming and the ESL students, as well as frequent "down time" for the IBM programs have been serious problems in the computer lab, but they did not appear to affect enrollment. Twenty new computers, several printers, and different software programs have recently been added to the lab. (HTH)

Identifiers—*Writing to Read Program

A study evaluated the effects of one reading software program on the written language production of kindergarten and first grade students. Subjects were approximately 600 students from six different schools–three using the computerized reading program, Writing to Read, and three comparable in demographics, but not using the program. Stories written on the topics of the children's choice were gathered from all students during a two-week period. The writing samples were evaluated for (1) number of communication units, (2) mean number of words per communication unit, (3) and stages of spelling generalizations. Students in the Writing to Read program also had daily access to an IBM typewriter and daily language experience through writing activities. Control group students had no computers or typewriters and were infrequently exposed to language experience activities. Results of analyses showed that writing samples from the students using the computer program contained twice as many communication units as those of the control group. Additional differences favoring the computer group were found in all measures. (FL)

Identifiers—*National Policy

Speech, language, and composition professionals should take a leadership role in working toward a national public policy on language. The declining rates of literacy and educational achievement in AfroAmerican communities serve as evidence that such a policy is needed. However, the policy would govern language teaching and language use throughout the United States and would ultimately be beneficial to all communities. Such a policy would (1) reinforce the need for and teaching of standard American English, (2) promote the legitimacy of mother tongue languages and dialects, and (3) promote the acquisition of one or more foreign lan-

guages, preferably those spoken in the third world, because of their widespread use in this hemisphere. Steps that speech, language, and composition professionals can take in making such a policy a reality include aligning with political progressives in demanding restoration of budget cuts from education and other domestic programs, conducting language awareness campaigns needed to accompany the movement for a language policy, and working with the public schools to develop uniform standards and guidelines for linguistic performance. **EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Aggression, Battered Women, Crime, Emotional Response, *Females, Higher Education, *Hostility, *Literature, *Mass Media, Rape, Victims of Crime, *Violence, *Womens Studies

A course entitled "Women and Violence in Literature and the Media" extends the definition of violence to include not only physical and emotional abuse but psychological manipulation and destruction as well. The course has two major objectives: to establish that violence against women does occur in our society and is culturally approved of and perpetuated, and to explore the expression in literature and the media of male violence against women, the ways women respond to that violence, and the conditions under which women become violent. In the first part of the course, several documentaries on the subject of women as victims are shown, including "The Fear That Binds Us," which incorporates personal testimony of women who experienced incest, battering, or rape, and "Why Men Rape," based on interviews with convicted rapists. In the second part of the course, various pieces of literature are assigned, including Norman Mailer's "The Time of Her Life," John Fowles's "The Collector," and Judith Rossner's "Looking for Mr. Goodbar." While the course paints a grim picture, the reality is that it is a violent world and women are particularly vulnerable. However, women do not have to resign themselves to being victims. Individually and collectively, women can not only cope with male violence against them but can reduce and, ultimately, stop it. (A list of films and texts used in the course as well as a selected bibliography of materials on violence against women are appended.) (DF)

Identifiers—University of California Los Angeles

Noting that universities seldom provide writing instruction at the dissertation level or, as is too often the case, at any level of graduate education, this paper provides a rationale for dissertation training at the graduate level, and explores the dissertation workshop at a west coast university. The first half of the paper discusses six compelling reasons favoring writing instruction at the dissertation level and refuting the false assumption that graduate students are rhetorically equipped to handle the idiosyncracies of dissertation writing. The resulting clearer thinking during dissertation writing, and long-term improvement in advising are also discussed. The second half of the paper describes the noncredit dissertation workshop offered to the graduate community at the University of California at Los Angeles. The nine three-hour sessions, which combine lecture and practical experience in prose analysis and peer editing, are described as follows: (1) overview (identifying the dissertation writing process and assessing support facilities); (2) research and organization; (3) writing and revising the rough draft; (4) workshop activity (students read and comment on each other's purpose statements using a prepared editing tool); (5) style; (6) workshop activities (students read and comment upon each other's revised drafts, then further revise their own manuscripts); (7) documentation, editing, and publishing; (8) workshop activity (students edit each other's proposals); and (9) final proposal tune-up. The paper concludes with mention of the enthusiastic response to the workshops, and a discussion of two benefits of the program as seen by the instructor. (HTH)

Identifiers—*Thoreau (Henry David)

To help maintain class interest in the important themes addressed in "Walden" and "The Duties of Civil Disobedience," a high school English teacher has presented a dramatic monologue as Henry David Thoreau to his students. After much library research, the teacher used some of the props characteristic of the author, such as a walking stick and a flute, which he played accompanied by a recording of marsh sounds. He typed up lyrics of contemporary songs and introduced the composers as "modern" poets who held Thoreau's beliefs. His first presentation as Thoreau left such an impression on students that they wrote about and discussed it for years afterward. The presentation also had a profound effect on staff members and students' parents as well. The instructor began giving the presentation for other schools, colleges, and community groups in ten different states and in England, as well as for the Thoreau Society during its annual meeting on the anniversary of the author's birth, and each summer at Walden Pond State Reservation in Massachusetts. He has also given presentations as other authors and characters, although none approaches the popularity of Thoreau. Teachers interested in presenting similar "living history" should consider several recommendations: (1) notice any natural talents that can be incorporated into the presentation, (2) be sincerely interested in the character and believe that young people can benefit from his or her wisdom, and (3) research carefully the requisite background, behavior, philosophy, dress, and speech. Identifiers—*Poland, *Writing Style

Members of the Polish faculty at the English Institute (Poland) primarily use English as a second language (ESL) techniques to teach writing, with grammar and idiom drills, and little writing beyond the sentence level. An American professor, on the other hand, used a process approach to teach writing by providing specific instructions about locating a suitable topic, generating or inventing information, analyzing the audience's and the writer's roles, organizing the material by mode and aim, writing the text, and carefully revising it. The students in the American professor's class performed better than those taught by the Polish faculty. Despite the process approach, the Polish students' writing was distinctively Slavic in style. Rather than favor the linear discourse that American schools promote, Slavic discourse favors a circumvoluted organization and style, which entails turning, coiling, and folding about a central concept. The types of proofs that Polish students used in persuasive prose relied heavily on definition, comparison and contrast, circumstance, relationship, and historical testimony. Polish students also rejected the scientific method and the entire "thesis" orientation to essay composition. The results of the American professor's class indicate that the process approach to writing instruction can be used successfully with ESL students when they have achieved moderate fluency in the foreign language, and that teachers need not wait until students have achieved near perfect fluency and correctness before requiring greater quantities of second language writing. Identifiers—*Thinking Skills

As a consequence of studies indicating that students' ability to think can be improved through direct instruction, this booklet presents one approach to teaching thinking skills within the context of existing curricula--a model described as the "inclusion process." The booklet discusses what thinking skills should be taught and how to decide which skills are appropriate. It then describes four approaches for teaching thinking skills: infusion, a separate course, linkage, and inclusion. Next, the booklet describes using the inclusion process and guidelines for teaching thinking skills using focus and application lessons. The booklet concludes by discussing the universality of the inclusion process, evaluating thinking skills instruction, and advocating a focus on process rather than content. (EL)

Recognizing the contradictory or inconclusive findings on class size in English, this booklet provides a summary and analysis of existing class size research and describes the kinds of research that would shed new light on the question of class size and secondary English. The first section contains the report of the Task Force on Class Size and Workload in Secondary English Instruction for the Executive Committee of the National Council of Teachers of English. It describes charges given to the task force, existing research on the effects of class size, general recommendations for research, and recommended topics for research. The second section, containing a summary of research on class size and English, discusses reviews of the literature, reports of studies on the effect of class size on achievement and on quality, and highlights some particularly comprehensive studies on achievement and quality in different class sizes. A reference list of about four pages is included. (EL)

Descriptors—Comparative Analysis, Grade 1, Literacy, Primary Education, Self Concept, Sequential Approach, *Student Attitudes, *Teaching Methods, Vocabulary Development, Workbooks, *Writing Improvement, *Writing Instruction, *Writing Readiness, *Writing Research
Identifiers—*Expressive Writing

A study contrasted two first grade writing programs to ascertain changes in the students' regard for writing in a manner that could be measured and compared. One writing program encouraged students to write expressively and find their way into print, while the other program used the more traditional or skill-sequenced approach through preparatory steps. It was hypothesized that students using the expressive writing strategy would show measurable improvement in three aspects: (1) the students' understanding of the function of writing, (2) their attitude toward writing, and (3) their regard for themselves as writers. The pretest and posttest instrument consisted of 24 questions that covered writing function, attitude, self-concept, and technical vocabulary. The writing programs were monitored by collecting samples of work from six randomly chosen students from each of six classrooms. Results showed the expressive writing students improved in their grasp of technical writing terms, and yet the two groups did not appear to differ significantly in their regard for themselves as writers. In addition, the expressive writing classes' positive responses to writing declined over the course of the year while the skill-sequenced class did not grow appreciably more positive toward writing. Descriptors—Essays, Grade 11, High Schools, *Language Processing, *Learning Processes, Notetaking, Reading Comprehension, Reading Writing Relationship, *Recall (Psychology), Study Skills, *Writing (Composition), Writing Processes

Recall data from eight eleventh-grade students were analyzed to determine the effects of writing tasks on recall of content and relationship units at three levels of importance in the content structure of 21 prose passages. The data were coleicted as part of an earlier study of the effects of three writing tasks (notetaking, answering study questions, and analytic essay writing) on learning information from prose passages. The results of the two studies showed that the level of importance and the interaction of highest level and essay writing enhanced the recall of those relationship units. An abbreviated prose passage is provided as a sample, as well as examples of prompts and student responses for the three writing tasks. (HTH)

Descriptors—Academic Achievement, *Cognitive Processes, *Critical Thinking, Educational Change, *Educational History, *Educational Improvement, *Educational Philosophy, Educational Practices, Educational Research, *Educational Trends, Elementary Secondary Education

Focusing on the revival of interest in teaching critical thinking as a major goal of schooling in American education, this paper examines why it has recurred, what is being emphasized, and, if there is significant change since the past occurrences, what has made that possible. Among the questions the paper addresses are: (1) what the renewed interest in critical thinking means to educators in elementary and secondary schools, (2) how critical thinking is being approached today compared to orientations advocated over the past 40 years, (3) how critical thinking compares to other kinds of thought processes also being emphasized in current efforts to improve school programs or to strengthen instruction of the nation's youth, and (4) what the results are–in terms of student achievement–of introducing critical thinking into the classroom. The paper concludes with an eight-page bibliography, a list of thinking skills meetings and conferences for 1984-1986, and a list of organizations in the Association for Supervision and Curriculum Development's Collaborative on Teaching Thinking. Descriptors—Descriptive Writing, Elementary Secondary Education, Expository Writing, Language Usage, Narration, Persuasive Discourse, Prewriting, Revision (Written Composition), *Teaching Methods, *Writing (Composition), *Writing Exercises, Writing Improvement, *Writing Instruction, *Writing Processes

Noting that effective writing instruction depends on careful planning informed by knowledge of the writing process and its variations in relation to different audiences and purposes, this teacher's guide explains the nature of the writing process and how it relates to instruction. The purposes of the guide are threefold: to highlight current theory and research findings on the composing process and its relation to instruction and student learning, to identify the elements of the composing process and their implications for promoting writing development in the classroom, and to offer instructional strategies to help students master varied types of writing. The sections of the first half of the guide discuss (1) writing as a recursive process; (2) postulates related to the writing process; (3) elements of the composing process using three functions of language (expressive language, transactional language, and poetic language); and (4) five elements of the composing process (prewriting, drafting, revising, editing, and post-writing stages) and their implications for instruction. The second part of the guide presents ideas for instruction within the rhetorical types of writing: narrative, descriptive, expository, and persuasive. The sections for each type of writing are divided into elementary, intermediate, and high school levels, and include a criteria worksheet and a revision checklist. Appended are a bibliography, a glossary, a list of regional curriculum service units in New Jersey, optional vocabulary choices for the revision checklists and a feedback sheet for teachers using the guide. Descriptors—Basic Skills, High Schools, *Peer Teaching, *Program Development, Skill Development, Tutoring, Writing Improvement, *Writing Instruction, *Writing Laboratories

The experience of implementing a writing center in a central Illinois high school created several suggestions for other schools considering such a program. Directors should first consider who would benefit from a writing center and what these benefits would be. They must then prove–to themselves first, and then to the faculty and the administration–that the school situation warrants the creation of a peer tutoring service. Since many high school English departments have barely enough money to cover even the cost of mimeographing or photocopying, the directors must be aware of the bare necessities that a writing center must have in order to function properly. They must be careful not to choose a room with too much space and must also be aware of the danger of signing on too many tutors. The National Honor Society or the counseling department are good places for the director to look for students with English proficiency for tutoring. Directors can use a variety of inducements to encourage students to tutor, including the promise of recommendations for scholarships and extra study time. Finally the idea of using the writing center must be "sold" to the students by means of an inexpensive publicity campaign. (Samples of student record and tutor referral forms are appended.) (HTH)

Descriptors—Concept Formation, *Kindergarten, Primary Education, *Reading Readiness, Reading Writing Relationship, Role Models, Vocabulary Development, *Writing (Composition), *Writing Research
Identifiers—*Print Awareness

A study examined whether there were any differences in the concepts about print, writing vocabulary, and prereading performance of selected kindergarten children who were provided with (1) independent writing time and exposure to a writing model in the school environment, (2) independent writing time without the writing role model, and (3) neither the independent writing nor the writing role model. Subjects, 72 kindergarten students in a school in Jasper, Alabama, were placed randomly in one of the three groups and received one of the three treatments over a six-week period. All subjects were posttested within two weeks following the treatment period using all three measures. The results of the posttest indicated that independent writing time is conducive to children's acquisition of concepts about printed language, which occurred through

creative expression during independent writing time without direct, formal instruction. However, a writing role model did have positive results on children's writing vocabulary performance. Finally, independent writing time, with or without exposure to a writing role model, did not improve performance significantly in prereading skills. (HTH)

Identifiers—Authoritarian Behavior, *Authoritarian Teaching, Authority, Authority Figures
A major problem in many composition classes is the unwillingness of the instructor to relinquish control in the classroom. Because students are excluded from having control in the classroom and control over their own writing, they become disenchanted with the processes of learning and discovery and the power those processes create. Students should be encouraged to develop their thinking and writing skills. A current misconception holds that instead of using their freedom constructively, students will develop a carefree, undisciplined attitude. However, that possibility can be minimized when students are encouraged to express meaning and make discoveries in their writing. Teachers must take responsibility for developing their students' abilities and adopt a noninterventionist teaching approach. Classroom lecture should be reduced and teachers should talk with students instead of at them. In addition, students should be provided with opportunities to learn from each other and occasionally be allowed to take the role of teacher. The teaching of composition demands a democracy in the classroom that is necessary for students' growth in writing, reading, thinking, and learning. (DF)

**Using the File Approach in Freshman Composition.**
Pub Date—[83]
Note—11p.; Appendices may be marginally legible.
Pub Type— Guides - Classroom - Teacher (052)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—College Freshmen, Expository Writing, *Freshman Composition, Higher Education, *Information Storage, Resource Materials, *Teaching Methods, Writing (Composition), Writing Improvement, *Writing Instruction, Writing Processes
Identifiers—Topic Selection, Writing across the Curriculum
Using the file approach in freshman composition gives students experience with the selection and utilization of a range of sources for writing, the awareness of writing as a learning activity that is by nature a process, and the opportunity to write and read across the curriculum. In this approach students are expected to keep a file of information, ideas, and possible topics for compositions collected from magazines, newspapers, or their own experiences. Students receive a peer evaluation sheet and worksheets designed for organizing file information. Students are encouraged to develop the file based on areas of vocational or avocational interest, since students' interest and achievement tend to improve if they perceive the class and assignments as being of individual importance. This focus also enables students to experience writing as a process of gaining knowledge about a topic. In addition, the conferences and peer evaluation components of the file approach allow students to learn how diverse people think and feel about a topic of importance to the writer, and about its development in an essay. Finally, the file approach reveals the process nature of writing. (Appendixes contain a worksheet for organizing file information, and a peer evaluation sheet.) (EL)

A study explored the effects of word processing on the revision strategies of 20 advanced college freshmen enrolled in a required writing course. Subjects were divided into two groups of 10, each of which alternately wrote a series of four essays on and off the computer. For each essay students submitted three drafts, which were analyzed for revisions. Each student produced two essays with word processing and two with pen and typewriter. In addition to undergoing text analysis, the essays were judged by trained raters using an analytical scale, so that the quality of the essays could be related to the number and kinds of revisions. Results of the analysis of 4,048 between-draft revisions of 80 essays indicated that writing on a computer did not lead to increased revision–at least not for these able students. The finding that there was no positive relationship between extensive revision and the quality ratings, however, suggests that manipulating text for the sake of revision has little value for students or their writing. Nor did the students make different kinds of revisions with a computer than they did with pen and typewriter. The essays produced with pen and typewriter, moreover, received ratings comparable in quality to those produced on the computer. (Author/HTH)

Intended to help composition teachers take advantage of current advances in word processing technology, this booklet demonstrates how teachers can create computer lesson files for students that incorporate findings from research on effective writing instruction and allow students to develop, shape, and revise their own writing at the computer monitor. The first section of the booklet presents a brief review of current knowledge about how writing may best be taught and how the computer can be used to teach it. The second part of the booklet explores some assumptions about teaching writing with word processors, and then provides practical suggestions for selecting software, teaching word processing while teaching writing, developing computer/writing lesson files, journal writing on the computer, collaborative writing, and using the computer to search databases for research papers. The appendix includes sample lesson files. (HTH)

Acknowledging that to study the development of a language is to study the history and culture of people and that English has been influenced by many geographic, political, economic, social, and linguistic forces, this booklet provides a ready reference for elementary and middle school/junior high school teachers confronted with students' questions about the characteristics of the language they speak and are learning to read and write. Since most questions are directed toward words and their spellings, the first section of the booklet emphasizes selected historical aspects of vocabulary growth and orthographic change. The second section of the booklet presents exercises designed around actual student questions, providing not only initial suggestions for vocabulary study activities, but also a rationale for the incongruities of English with an eye toward putting modern usage into a historical perspective. Proceedings of a conference of international Orwell experts gathered at the Library of Congress are presented in this collection. The collection is divided into four sections, corresponding with the four conference sessions: "What Orwell Really Wrote"; "Orwell: The Man"; ""Nineteen Eighty-Four': The Book"; and ""Nineteen Eighty-Four': Its Meaning in 1984." Summaries of the subsequent floor discussions are included at the end of each section. The papers presented and their authors are as follows: (1) "What Orwell Really Wrote" (Peter Davison); (2) "Orwell the Man" (Jenni Calder); (3) "The Englishness of George Orwell" (Peter Stansky); (4) ""Nineteen Eighty-Four': Politics and Fable" (Denis Donoghue); (5) ""Not One of Us': George Orwell and 'Nineteen Eighty-Four'" (Alfred Kazin); (6) ""Nineteen Eighty-Four': A Novel of the 1930s" (Jeffrey Meyers); (7) "The Reception of 'Nineteen Eighty-Four'" (Bernard Crick); and (8) "Orwell's Legacy" (Nathan A. Scott, Jr.). (HTH)

Descriptors—Elementary Secondary Education, Evaluation Methods, *Prewriting, Research Papers (Students), *Revision (Written Composition), *Teaching Methods, Training Methods, Vocabulary Development, *Writing Evaluation, Writing Exercises, *Writing Instruction, *Writing Processes
Identifiers—*California Writing Project, National Writing Project, University of California Irvine

A collaborative effort on the part of teachers from and consultants for the University of California, Irvine/California Writing Project, this guide presents ideas for teaching writing as a process at all levels of the curriculum. Each section of the guide presents an essay introducing the section topic, followed by practical ideas for teaching that technique or stage of the writing process. Also included are applications of writing techniques at particular grade levels, descriptions of ways to modify assignments, new ideas that sprang from an original idea, and variations on a theme. Following an introduction to the California Writing Project, the contents of the guide are divided into the following sections: (1) the writing process; (2) prewriting; (3) prewriting in the elementary school; (4) prewriting in different subjects; (5) showing, not telling (a training program for student writers); (6) writing; (7) domains of writing; (8) writing the saturation report; (9) point of view in writing; (10) writing the I-search paper; (11) sharing/responding; (12) Reading Around Groups (RAGs) for sharing/responding; (13) rewriting/editing; (14) revising for correctness; (15) building vocabularies; (16) evaluation; and (17) evaluation techniques. **Teacher Handbook, Communication Skills, Grades K-12. North Carolina Competency-Based Curriculum, Subject-by-Subject.**
North Carolina State Dept. of Public Instruction, Raleigh. Instructional Services.
Pub Date—85
Note—700p.
Pub Type— Guides - Classroom - Teacher (052)
EDRS Price - MF04/PC28 Plus Postage.
Descriptors—*Communication Skills, *Competency Based Education, *Educational Objectives, Elementary Secondary Education, *English Curriculum, Handwriting, *Integrated Curriculum,

Language Arts, *Language Skills, Listening Skills, Literature Appreciation, Reading Instruction, Speech Skills, State Curriculum Guides, State Standards, Study Skills, Writing Skills
Identifiers—North Carolina

Representing a significant part of the development of a basic education program for North Carolina's public schools, this teacher handbook and integrated competency-based curriculum guide provides recommended goals (broad statements of general direction or purpose), objectives (specific statements of what the student will know or be able to do), and measures (a variety of suggestions for ways in which the student may demonstrate ability to meet the objective) for communication skills for kindergarten through grade twelve. The teacher handbook section provides the background and overview of the curriculum and discusses its philosophy and rationale, thinking skills, programs for exceptional children, and recommendations for those using the curriculum. The curriculum guide section is divided into grade levels with the goals, objectives, and measures defined for each of the following communication skills: listening, speaking, reading/literature, writing, handwriting, viewing, and study skills. (Among the appendixes are North Carolina's Elementary and Secondary School Reform Act of 1984, lists of course requirements for high school graduation and testing requirements, a description of the textbook adoption process, and an organizational chart for instructional services.) Wisconsin State Dept. of Public Instruction, Madison.
Pub Date—86
Note—285p.; Prepared by the Language Arts Task Force. Photographs may not reproduce well.
Pub Type— Guides - Classroom - Teacher (052)
EDRS Price - MF01/PC12 Plus Postage.
Descriptors—*Communication Skills, *Curriculum Development, Elementary Secondary Education, *English Curriculum, *Integrated Curriculum, *Language Arts, *Language Skills, Listening, Literature Appreciation, Mass Media, Reading Instruction, Speech Communication, Teaching Methods, Writing Instruction

Emphasizing language as a means of communication and as a learning tool, this guide to curriculum planning presents a conceptual framework for a kindergarten through grade twelve language arts program emphasizing the integration of listening, speaking, reading, writing, and media use. The content and skills sections in the guide include a statement of scope and sequence, goals and outcomes, evaluation techniques, suggestions for parents, and exemplars. Following an overview section describing the purpose of the guide, the communication approach to language arts, and the integration of the language arts, and guide discusses the following language skills: language, literature, listening, speaking, reading, writing, using media, curriculum planning, implementation and evaluation, and critical issues. (Appendixes include resources, proposed guidelines for free and responsible student journalism, teacher education program approval standards, workload and the teaching of secondary school English, and guidelines for nonsexist uses of language.) **Holistic Writing Evaluation: Patterns of Growth in Literacy of Students in the Second and Fourth Grades.**
Pub Date—Dec 85
Note—25p.; Paper presented at the Annual Meeting of the National Reading Conference (35th, San Diego, CA, December 3-7, 1985).
Pub Type— Speeches/Meeting Papers (150) — Reports - Research (143)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—Elementary Education, Evaluation Criteria, Grade 2, Grade 4, *Holistic Evaluation, Interrater Reliability, Longitudinal Studies, *Writing Evaluation, *Writing Improvement, Writing Processes, *Writing Research, Writing Skills

A study explored (1) whether children demonstrated growth in writing ability through the experience of writing two or three times a week without direct teacher instruction; (2) what changes could be observed over time in the writing samples of second and fourth graders; (3) whether written language growth was a continuous progression of upward movement or was sporadic in nature; (4) whether growth in writing would be evident to raters not trained with prototypes of competency levels; and (5) what criteria raters would develop to evaluate growth in writing ability. Samples of writing were taken from ten students as second graders and again two years later when they entered fourth grade. Ten raters were then asked to read the samples and devise their own evaluation criteria. Results showed that the raters were able to identify a pattern of growth in the writing of the second grade students over a 14-week period, but less able to discern growth in the fourth grade writing samples. The results also indicated that the raters had generated criteria in four areas of information: in text, organization of text, language use, and mechanics of writing. Among the conclusions drawn from the study are that growth in literacy can be established within grade levels, that growth and development in writing ability is not the same for all children, and that student writing can improve without any guidance from teachers. (Examples of student writing and raters' responses are analyzed in numerous figures.) (DF)

One of a series of 20 literary magazine profiles written to help faculty advisors wishing to start or improve their publication, this profile provides information on staffing and production of "Each Has Spoken," the magazine published by Thomas Jefferson High School, San Antonio, Texas. The introduction describes the literary magazine contest (and criteria), which was sponsored by the National Council of Teachers of English and from which the 20 magazines were chosen. The remainder of the profile–based on telephone interviews with the advisor, the contest entry form, and the two judges' evaluation sheets–discusses (1) the magazine format, including paper and typestyles; (2) selection and qualifications of the students on staff, as well as the role of the advisor in working with them; (3) methods used by staff for acquiring and evaluating student submissions; (4) sources of funding for the magazine, including fund raising activities if applicable, and production costs; and (5) changes and problems occurring during the advisor's tenure, and anticipated changes. The 1984 issue of the magazine is appended. (HTH)

Descriptors—Attitudes, Bias, Editing, Higher Education, Journalism, *Media Research, *Newspapers, News Reporting, Opinions, *Photographs, Photojournalism, Public Opinion, *Reader Response
Identifiers—*Mug Shots, *News Stories
A study investigated whether newspaper mug shots are perceived by readers as being positive or negative in tone and whether the mug shots that are selected match the roles of their subjects in accompanying stories. Twenty-three news and feature stories with associated mug shots were clipped from seven daily newspapers. Pictures and stories were then separated, and the pictures were distributed to 51 undergraduate students who were asked to indicate whether each photo gave them a positive, negative, or neutral impression of the subject. The stories that had originally accompanied the pictures were distributed to a different group of 66 undergraduates who were also asked to state their impressions of the subjects in stories. Analysis of the results indicated that readers agree significantly on their impressions of subjects in the stories, as did the group who viewed only the mugshots. The fact that the impressions of the subjects were similar whether the story was read or the mugshot alone was viewed indicates that editors may have based their selection of accompanying photos on their subjective impressions of the stories. In the interest of remaining fair and impartial, editors should exercise caution in their selection of mug shots. (Tables of findings are included). (DF)

**The Funding of Secondary School Newspapers in Ohio.**
Pub Date—Aug 86
Note—33p.; Paper presented at the Annual Meeting of the Association for Education in Journalism and Mass Communication (69th, Norman, OK, August 3-6, 1986).
Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)
EDRS Price - MF01/PC02 Plus Postage.
Descriptors—Curriculum Development, *Educational Research, Faculty Advisers, *Financial Support, High Schools, *Journalism Education, *School Newspapers, School Publications, School Surveys, Student Publications
Identifiers—Ohio
A study identified the principal ways in which high school newspapers are funded in Ohio, particularly with respect to the public or private nature of the schools, the paper size, frequency of publication, the methods by which papers are printed, and the sorts of staffs that publish them. Of the 1,080 high schools listed for the state, 228 completed the survey, 160 of which reported publishing a newspaper. The results indicated that school size was related to the presence or absence of school newspapers, although there was no clear relationship between community size and publication of a paper. Public schools were more likely to sponsor student newspapers than were private or parochial schools. The most common publication cycle for papers was monthly, but nearly 40% of respondents published less often. Offset printing was the most popular means of reproduction, and the likelihood of using offset increased with the size of the school. Only 8% of the papers were printed in a school or district print shop. Overall, the greatest percentage of the high school newspaper budget came from single copy sales. Advertising and administration grants were also important sources of income, with fund raising, subscription sales, and student activities reported as less important sources. More than half the papers were published by classes receiving academic credit for the work. The results suggest that high school newspapers are not being published frequently enough, due in part to funding. The long-range problem of financing the newspaper will not be solved until journalism takes a more prominent place in the curriculum, thus also attracting advisors trained in journalism. (HTH)

**The Effects of Peer Evaluation on Attitude toward Writing and Writing Fluency of Ninth Grade Students.**
Pub Date—85
Note—96p.
Pub Type— Reports - Research (143)
EDRS Price - MF01/PC04 Plus Postage.
Descriptors—Attitude Change, Comparative Analysis, Grade 9, *Peer Evaluation, Secondary Education, Sex Differences, Teaching Methods, *Writing Apprehension, *Writing Evaluation, Writing Improvement, Writing Instruction, *Writing Research
A study examined the effects of peer evaluation on writing fluency and writing attitudes. Subjects, 177 ninth grade students from seven classrooms, were randomly assigned to experimental and control groups. Subjects in both groups wrote a first draft of a paper. Those in the experimental group then received peer evaluation training and rewrote their papers based on assistance from their peer evaluation group. Subjects in the control group rewrote their papers receiving assistance from the teacher only when they asked for help with specific areas. Subjects also completed pretests and posttests that measured their attitudes toward writing. Writing fluency was measured by a word count on the first and last drafts. The results showed a significant overall increase in positive attitudes toward writing in the experimental group, and that females in both groups showed a more positive attitude toward writing than males on both the pretest and the posttest. There was, however, a decrease in word count from the first to the last draft in the experimental group, suggesting that rather than helping the writers to feel more at ease and to expand their writing, peer evaluation might have helped the experimental subjects refine and tighten their writing. A study explored collaborative writing practices in six major professional associations: (1) The American Institute of Chemists, (2) the American Consulting Engineers Council, (3) the International City Management Association, (4) the American Psychological Association, (5) the Professional Services Management Association, and (6) the Society for Technical Communication. Two hundred randomly selected members of those associations completed a survey, the results of which indicated that collaborative writing occurs frequently among members of those associations. A second survey was subsequently administered and on-site interviews were conducted. Analysis of those data indicates that there is a general shift toward recognizing the importance of both context and interaction in constructing realities and texts. In addition, even texts produced by one writer are built up or invented collaboratively, and most on-the-job writing is collaborative from beginning to end. The results suggest that perhaps collaborative writing should be encouraged in classrooms, although the tension between those who view collaboration as an enriching, socially constructive act and those who regard it as an abandonment of personal responsibility must first be defused. Descriptors—*Computer Assisted Instruction, Computers, *Educational Theories, Educational Trends, Elementary Secondary Education, *Futures (of Society), *Integrated Activities, *Language Arts, Learning Processes, *Theory Practice Relationship
Addressing the issue of what role computers should have in the language arts classroom, this paper argues that computers and language are intimately connected and that previous discussions of the issue have failed to consider this connection. Following a brief introduction focusing on the functions of the computer, the paper discusses four aspects of the computer's relation to language derived from an analysis of computer functions. The aspects discussed deal with computers (1) as tools for representing knowledge, (2) as tools for interpreting symbols, (3) as communication devices, and (4) as redefinable tools. The paper next describes a classroom of the future, identifying ways in which current activities might be used to teach reading and writing, emphasizing that it is appropriate to discuss computer use when thinking of language. The paper concludes with a consideration of several questions for research based on this thesis. Five pages of references are included, and an appendix contains copies of articles written by students using computers and electronic mail. (FL)

While the typical pantheon of journalism history heroes is made up almost entirely of individuals who campaigned for more governmental regulation and increased social liberalism, there is also an opposing tradition in American journalism, one based on the premise that governmental cures are in most cases worse than the diseases they are designed to control or eradicate. In looking at forgotten conservative journalists, it is important to examine the career of Frank Kent (1877-1958), a Baltimore "Sun" writer and syndicated columnist who gained a reputation for opposition to President Roosevelt's New Deal policies. In 1933 popular support for Roosevelt was so great that even Congressmen who had objections were reluctant to speak them. The combination of economic and social crises with Roosevelt's personal charm made allies of almost every editor and reporter. Frank Kent, influenced by the historical and political science perspective he brought to reporting and writing, was bothered by this uncritical acceptance of the National Industrial Recovery Act and the National Recovery Administration (NRA). Roosevelt and his administration struck back at Kent and other critics, but by 1934, other journalists began to join Kent in opposition to the NRA, and a study by the liberal Brookings Institute did indeed reveal that the economy was not recovering. The NRA system began breaking down in late 1934; by 1935 small businesses were beginning to openly defy the NRA codes; and by the end of 1935, the Supreme Court declared the NRA unconstitutional. Kent was vindicated. Despite Roosevelt's resounding reelection, Kent's journalistic practice provides a different perspective on the current view of some conservatives that the press should support presidential prerogatives. The issue of whose "facts" and whose perspective will control classroom discussions of social questions tends to surface in one of two related ways: (1) in connection with efforts to mandate the content of the instructional matter, and (2) in connection with attacks on teachers whose instructional material

contains facts or evaluations offensive to a powerful social group or interest. A historical survey of the political monitoring of those who would give instruction concerning the ethics of social action, with focus on the ethics of communication, indicates a rediscovery after World War I of the importance of the ethical communication practices in democratic politics. The popularity of critical propaganda studies in colleges and universities during the mid-1930s was a short-lived phenomenon, however, and in the increasingly tense political atmosphere of 1939 to 1941, opponents of education who probed social ethics often branded ethical analysis as part of a conspiracy to undermine dominant American institutions. In the 1940s and 1950s, forces opposed to critical social analysis levied charges against educators and textbooks. The place of ethics in present day classrooms is, at best, ambiguous. While the upheavals of the 1960s and 1970s created a renewed acceptance of inquiries into the nature of modern society, the politics of recent years has seen the anti-critical trends continue, although now in the form of pressure from a variety of social groups harboring strong political opinions about what should and should not be taught. Descriptors—*Decision Making, Graduate Students, Higher Education, Instructional Improvement, *Interpersonal Communication, *Personal Autonomy, *Speech Curriculum, *Teaching Assistants
Identifiers—*Autonomy
A major decision confronting the basic communication course director involves the degree of instructional freedom to grant teaching assistants in regard to lecture/presentational materials, readings, written assignments, examinations, and grading procedures. In making these decisions, certain philosophical and pragmatic implications of possible choices must be considered from the standpoint of all parties involved–undergraduate students, graduate assistants, course directors, and administrators. Careful consideration of three key issues–comparability, support structure, and close coordination–indicates that granting a high degree of autonomy to graduate teaching assistants can maximize the benefit of the instructional process. Descriptors—College Curriculum, Communication (Thought Transfer), Communication Skills, Curriculum Design, *Curriculum Development, Higher Education, Models, *Small Colleges, *Speech Communication, *Speech Curriculum
The small college communication curriculum must, by necessity, be more limited than that of the university. However, it can still fulfill the needs of its students while responding to external curriculum requirements, such as those of the institution, accrediting agencies, professional societies, and employers. Two approaches to curriculum development involve creating a model curriculum that contains all the courses that any communication department, regardless of its size, should offer and identifying the competencies a curriculum should encompass. However, a nonprescriptive essential curriculum containing only two required courses and offering at least one course in each of seven different communication experience areas could provide a communication major appropriate to students and local needs. (Materials outlining the curriculum suggestions are appended.) (EL)

Descriptors—*Administrators, *Communication Research, Comparative Analysis, *Cultural Influences, Employer Employee Relationship, Foreign Countries, Interpersonal Communication, *Organizational Communication, Peer Relationship, Problem Solving
Identifiers—Brazil, Communication Styles, *Machismo, *Management Styles
Acknowledging that the Latin American cultural concept of "machismo" influences the way in which Brazilian managers tend to use authority rather than communication when resolving disputes with subordinates, a study compared Brazilian and American male managers' self-reported preferences for resolving disputes with employees and peer managers. Forty American and 40 Brazilian males in middle and top management positions each read a packet of four scripts describing various problems that a manager might have with an employee or another manager of equal status. Subjects were then interviewed to determine how they would resolve the problems. Responses were assigned to one of three classifications: communication, organizational power, or mixed approach. Results indicated consistent differences between American and Brazilian managers in their preferred ways of resolving disputes with employees and peer managers. American managers appeared somewhat more flexible as indicated by their greater use of communication strategies, while Brazilian managers appeared much more likely to respond rigidly and authoritatively to real and perceived insubordination. The only instance in which Brazilian managers were likely to use communication was when an employee appeared justifiably reluctant to take on a new task not included in his or her job description. Although it appeared that Brazilian managers are more authoritarian in their treatment of employees than are American managers, it should not be inferred that they are less communicatively competent than American managers. **The Relationship between Childhood Television Viewing Habits and Adult Viewing Behaviors.**
Pub Date—Feb 86
Note—55p.; Paper presented at the Annual Meeting of the Western Speech Communication Association (Tucson, AZ, February 15-19, 1986).
Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)
EDRS Price - MF01/PC03 Plus Postage.
Descriptors—Adults, Attitudes, Childhood Attitudes, Children, Comparative Analysis, *Habit Formation, Higher Education, Secondary Education, *Television Research, *Television Viewing, *Use Studies
A study examined whether a relationship exists between childhood viewing habits and adult viewing behaviors. Questionnaires on childhood and adult viewing behaviors were completed by 557 students in a basic public speaking course, 86 residents of a university family housing unit, 74 vocational students, and 23 members of the local Jaycees organization. Presence of television in the childhood home was compared with presence of television in the adult home and with four of the five adult variables (excluding types): time spent viewing, types of programs watched, general interest levels, television viewing philosophy, and viewing companions. Each of four of the five childhood variables (excluding types) was compared with each of four of the five adult variables (excluding types) and also with presence of television in the adult home. The overall findings indicated that, in many ways, childhood viewing habits are related to adult viewing behavior. The relationship between childhood habits and adult behaviors appears to be especially strong and interrelated in the areas of number of hours spent watching television, general interest level, television viewing philosophy, and types of programs preferred. The results put into question the uses and gratifications argument that people actively view to gratify needs. (Tables of data are included.) (HTH)

**Self-Report as an Approach to Measuring Communication Competence.**
Pub Date—Apr 86
Note—10p.; Paper presented at the Annual Meeting of the Central States Speech Association (Cincinnati, OH, April 17-19, 1986).
Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—*Communication Research, *Communication Skills, Interpersonal Communication, Public Speaking, Self Concept, *Self Evaluation (Individuals), Test Reliability, *Test Validity
Identifiers—Communication Competencies, *Self Report Measures
Self-report measures of perceived communication competence used properly can help build understanding of communication behavior, but used as indications of communication performance can only retard such efforts. Not all uses of such instruments are either legitimate or appropriate–for example, using self-report measures to determine an individual's actual communication competence. None of the scales currently used to measure perceptions is appropriate because none asks the subjects to estimate their perceived competence level, each is based on differing definitions of communication competence resulting in dissimilar items on the measures, and most are restricted to either an interpersonal or a public speaking context. In an ongoing research program related to willingness to communicate, it was found that no appropriate measure of self-perceived competence was available. Consequently, the Self-Perceived Communication Competence (SPCC) scale was developed. The SPCC is composed of 12 items chosen to reflect four communication contexts–public speaking, talking in a large meeting, talking in a small group, and talking in a dyad–and three common types of receivers–strangers, acquaintances, and friends. Results of an initial study using the SPCC were compared with those of others completed by the same subjects. The correlations suggest substantial personality influence in individuals' perceptions of communication competence. The strong correlation with willingness to communicate also suggests the potential impact of self-perceived communication competence on actual communication behavior. While the SPCC appears to be a valid measure of self-perceptions, it is not a valid measure of actual communication competence. (HTH)

Descriptors—Communication Skills, Higher Education, *Interdisciplinary Approach, *Interpersonal Communication, Skill Development, *Teaching Methods, Team Teaching, *Writing Instruction, Writing Processes, Writing Skills
Teaching English composition and interpersonal communication concurrently enhances students' opportunities to learn and apply communication skills. Since many of these skills are common to both courses of study, not only is learning reinforced, but the skills can be presented and practiced in a variety of ways. More important, English composition and interpersonal communication are exceptionally suited to using the strengths while compensating for the limitations of the other course. A team-taught interdisciplinary course can magnify and enhance the learning of communication skills in the following ways. First, interpersonal communication is inherently relevant to students: they possess a lifetime of firsthand knowledge (such as self-concept, emotions, perceptions, and personal relationships). Teaching the process of writing provides students with a method to discover, cultivate, order, and express what they think and feel. Second, "thinking on paper" encourages students to develop a personal and profound understanding of their perceptions, feelings, attitudes, behaviors, and relationships. Third, to complete written assignments, students must selectively apply interpersonal com-

munication skills, and test and modify their behaviors in contexts outside the classroom. Fourth, team-teaching provides added opportunities to respond promptly and appropriately to student needs, and to practice interpersonal skills in the classroom. Fifth, students gain confidence and proficiency as they comprehend, practice, and improve both interpersonal and composing skills in the varied and difficult tasks they set for themselves. Descriptors—Audience Analysis, Developing Nations, *Evaluation Criteria, *Films, Information Utilization, Mass Media, *Media Research, *Models, *Perception, Periodicals
Identifiers—*Audience Response, Philippines, *Uses and Gratifications Research
A study tested a causal model of international communication media appraisal using audience evaluations of tests of two films conducted in the Philippines. It was the fourth in a series of tests of the model in both developed and developing countries. In general the model posited determinative relationships between three exogenous variables (editorial tone, communication potential, and utility) and appraisal. The two films were documentaries distributed worldwide by the United States Information Agency and intended for showing in informal audience settings and on television. One film was designed to impart the American values of cooperation and teamwork, while the other stressed the mutual interests of all nations. Both films were intended for primarily older, educated male elites. Results showed the following: (1) a good overall fit of the model to the observed system of intercorrelations; (2) a positive relationship between communication potential and appraisal; (3) a positive relationship between utility and appraisal; and (4) positive interrelationships between the variables of editorial tone, communication potential, and utility. As opposed to findings in the other tests of the model, negative rather than positive relationships were found between editorial tone and appraisal. It was concluded that the model, which was previously supported with research on magazines, could be generalized to other media as well. (HOD)

Identifiers—*Intercollegiate Debate Topic
Designed to facilitate the research related to the preparation and presentation of arguments for the intercollegiate debate topic, this manual summarizes issues surrounding educational reform and quality control in American elementary and secondary schools. The excerpts from books, periodicals, and other sources not always readily available to public or research libraries included in this manual were selected to provide background information, an overview of the principal issues, and a balance of opposing views. The five sections of the manual focus on the following areas: (1) background and overview of educational reform; (2) school effectiveness and quality, testing, and general achievement; (3) achievement and curricular problems; (4) curricular solutions; and (5) teachers, school administration, and school finance. Also included in the manual are a selected bibliography of materials on the intercollegiate debate topic, a guide to information sources, and a list of available government publications on the intercollegiate debate topic. Descriptors—*Communication Skills, *Evaluation Methods, Evaluation Needs, Higher Education, Inservice Teacher Education, Pretests Posttests, Program Effectiveness, *Speech Communication, *Speech Instruction, *Student Evaluation, *Summative Evaluation
Identifiers—*Value Added Testing
To address the issue of how effectively speech communication instructors can be trained to develop longitudinal, "value-added" skills in their students one must first ask if they "should" be trained for such a task. One advantage is that it might be strategic for communication programs to initiate value-added testing so faculty might assume their own accountability and better control the instruments and procedures involved. Value-added testing might also provide more tangible research evidence that speech communication teaching methods produce the skills professed in the discipline. Alleged disadvantages include teachers' fear that poor "talent development" shown by their students might be used in a punitive way. This understandable fear can be offset by chairpersons making it clear that the longitudinal information on students is an integral part of the educational process. A review of the successful programs in Missouri and New York is enough to minimize the argument against misuse of value-added testing. To allay fears and maximize advantages, individual departments initiating value-added testing would be urged to select the instrument that appears most appropriate to their unique departmental mission. The Communication Competency Assessment Instrument, developed as an alternative method of assessing skills, was founded on the principle that assessment should be based on actual speaking and listening behaviors: all responses are either oral or nonverbal. Such an instrument could be administered as a pretest and posttest to undergraduate speech students. (HTH)

Descriptors—College Students, *Communication Research, Comparative Analysis, Females, Higher Education, *Language Usage, Males, *Pronouns, *Sex Bias, *Sex Differences, *Speech Communication, Student Attitudes
A study was conducted to examine pronominal usage by college students, with particular reference to the use of the generic "he." Subjects, 25 students in a nonverbal communication class and 30 students in an organizational communication course, completed essays describing the behaviors of a high status individual in response to a question worded in a sex-neutral manner. The essays were then coded for sexist and incorrect pronoun usage. Two weeks after the writing assignment, the students heard a lecture on sexist pronoun usage, then wrote another essay on the same topic. These essay were analyzed for any evidence of linguistic change. Results showed that 69% of the students used incorrect pronoun forms, primarily the generic "he," on the first assignment. After receiving instruction on sexist language, only 35% continued to use the forms on the second assignment, and use of the generic "he" decreased by 50%. On the first assignment, more females than males used the incorrect pronoun forms and only 60% of the females changed to the correct forms on the second assignment, compared to 70% for the males. This suggests that women are still likely to stereotype men as generally high in status, and that men are more aware of women's increasing visibility in high status occupations. (Copies of the essay topic and an outline of the sexist language lecture are appended.) (FL)

Identifiers—Penal Reform, *Prison Reform
Noting that new approaches must be found to decrease the numbers of inmates returning to United States prisons and to provide means for productive changes that will result in self-improvement and new options for inmates both inside and outside the prison after their release, a drama program was established in 1979 for inmates at the Federal Correctional Institution in Englewood, Colorado. The program at the medium security prison for adult males was sponsored by the prison chaplain and the recreation director and conducted by four outside volunteers once a week for three hours. Although some problems arose initially, most were overcome during the two and a half years the program existed. The program's benefits included teaching such communication behaviors and skills as role theory, credibility, and linguistic codes. Although the program is designed to benefit inmates, there were additional positive results for the prison administration, society, and communication researchers. (DF)

Identifiers—ACT Speaking Skills Assessment, Communication Competency Assessment Instrument
Improving the quality of undergraduate speech communication education depends to a large extent on effectively measuring student achievement in college level communication skills. While formal tests are not as well developed for speaking skills as for other areas of the curriculum, they are available. The two used most frequently are the Communication Competency Assessment Instrument (CCAI) and the Speaking Assessment section of ACT's College Outcome Measures Program. Both of these assessment tools were founded on the premise that impressions of communication competence are based on actual behaviors. The ACT Speaking Skills Assessment consists of three 3-minute speaking assignments, based upon print stimuli material that students usually read in advance to allow preparation time. The speaking assignments are practical in nature and require about 15 minutes to administer. ACT provides the testing institution with rating scales and prescored speaking samples for later training. The CCAI is administered in three sections. The first part involves numerous judgments about students' speaking abilities. Next, the students view a videotaped class lecture, and then they respond to statements about both the videotape and experiences they have had. The CCAI assesses those speech skills that are directly observable in the

impressions formed of students by others. Speech performance ratings such as these seem to offer the most effective evaluation of the skills learned in a speech communication class. (HOD)

Identifiers—*Broadcast Education Association, *Columbia Broadcasting System
To eliminate misunderstandings between the worlds of education and broadcasting, it is necessary to recognize five myths: (1) The major force in educating the young is television itself; (2) the sheer amount of time children spend on television is more important than time spent in school; (3) television and education are the same thing; (4) more money is spent on television than is spent on education; and (5) people are forced to watch television. The fact is that television can be educational but is neither a curriculum nor a school. A number of programs have been instituted by the Columbia Broadcasting System (CBS) network to reach out to educators and assist them in using television to support their activities in the classroom, including the CBS Television Reading program and a "Scholar-In-Residence" program with professors in the humanities. In 1985, over 82,000 college students were enrolled in journalism and mass communication courses, an increase of over 10,000 students in those fields in five years. Because of this rapid expansion, educators should ensure that communications course work be not only popular and abundant, but also profound and excellent. Television and education should be complementary, and to achieve this broadcasters and educators need to work together. (DF)

Despite the immense pressure to redesign academic programs so that they have more vocational training appeal, members of the postsecondary academic community need to assert that a liberal arts education is the best education for all undergraduates, including communication majors. Despite its lack of direct vocational training, a liberal arts education is the best lifelong career preparation for several reasons. First, liberal arts study provides skills and encourages attitudes that are vital to all careers. With emphasis on speaking, writing, analytical and critical thinking, and awareness and examination of assumptions, liberal arts courses prepare all students for the myriad work situations in which they will eventually find themselves. Second, as we live more in an economic "global village," it is increasingly important to be able to work with understanding and appropriate skills across national and language boundaries. Third, narrow vocational skills become obsolete quickly, but skills in liberal arts, do not become outdated. Fourth, liberal arts study provides students with a broader perspective on problems and decisions, serving them well in their personal and professional lives. Finally, while science and technology are, in a narrow sense, neutral, their application involves profoundly moral issues. Liberal arts study in its best form provides dynamic opportunities for continued examination of difficult ethical questions. (HTH)

Descriptors—*Educational Change, *Educational Responsibility, Higher Education, *Social Change, Speech Communication, Teacher Education, *Teacher Effectiveness, Teacher Qualifications, Teacher Recruitment, Teacher Role, Teacher Supply and Demand, Teaching Methods
Although the American work force is generally better educated than ever before, the general productivity of American workers continues to drop. This trend indicates that too many people are unable to cope with the demands placed on them to organize, evaluate, and communicate information to each other. In order to better prepare citizens for life in a fast-paced society, changes in education are necessary. Teaching as a transmission of an organized body of knowledge must be replaced with instruction in the process of organizing knowledge. Since thinking requires language ability, a society shifting from industrial to information production and requiring new educational methods that enhance language ability places a greater burden upon the teacher, both as an instructor and as a model language user. Unfortunately, the most able students on college campuses major in law or engineering or medicine, and many students who prepare to be teachers are not the brightest or the most talented. Whatever the reasons that have been identified as causes for the decline in the quality of students who select teaching as a career, the result is the same: the quality of teaching suffers. (DF)

Identifiers—*Communication Behavior
Affective communication behavior is central to the teaching-learning process. A review of literature reveals that the affective domain has been viewed primarily as a teacher property rather than as an interactive variable in the process of student learning. However, there is a need for research that explores how affective behavior is negotiated within the classroom environment and serves in promoting cognitive achievement. Desirable research methods include detailed longitudinal observations, interviews, and stimulated recall. Ultimately, a model of teaching behavior that allows teachers to influence consciously learning outcomes must be developed. (DF)

Descriptors—Classroom Communication, *Communication Research, *Feedback, Higher Education, *Oral Language, Self Esteem, Speeches, *Speech Instruction, Speech Skills, Student Attitudes, *Student Reaction, Teacher Role, *Teacher Student Relationship
A study explored (1) the types of teacher oral feedback statements student speakers identify as helpful in improving their speeches, and (2) the types of oral feedback they identify as making them feel either good or bad about their speaking abilities. The student speakers–two female graduate students and a female graduate teaching assistant–were given one week to prepare an informative speech. The speeches were then videotaped, along with the instructor's oral critiques. While viewing the tapes, the students identified statements they perceived as helpful in improving their speaking ability and those that either increased or decreased their self-esteem. Students most frequently identified as helpful the feedback that was directed toward them personally and which focused on specific features of the speeches. They perceived complimentary feedback as promoting good feelings about their speaking abilities, but of limited usefulness in helping them learn how to improve their skills. Critical statements were sometimes perceived as promoting negative feelings; however, in some cases, these statements were perceived as enhancing self-esteem. This was most likely to occur when the critical comments were accompanied by positive nonverbal immediacy behaviors, such as smiles and reassuring gazes. (FL)

Descriptors—*Communication (Thought Transfer), Communication Skills, *Females, Interpersonal Communication, Metacognition, Nonverbal Communication, *Organizational Communication, Personnel Evaluation, *Professional Personnel, Self Evaluation (Individuals), Social Cognition, Verbal Communication
Identifiers—Communication Behavior, Communication Indicators, Communication Patterns, *Communication Styles, *Communicator Style
A study investigated the communication style of professional women in the work force. Subjects, 122 female professionals who had previously participated in a university sponsored management development workshop, completed a demographic profile sheet, the 51-question Norton Communicator Style Measure (CSM), and a communication proficiency assessment instrument measuring critical organizational communication skills that had been identified through a review of the literature. Results were then

analyzed to determine whether unique combinations of style variables could predict professional females' achievement levels or supervisor and self-evaluations of communications proficiency, and whether there are unique combinations or communication styles that predict the communicator image of female professionals. The results showed that unique combinations of communicator style variables could not be used to predict female achievement levels or supervisory proficiency ratings. However, some unique combinations of communicator style variables did appear to predict female self-proficiency ratings and overall communicator image. (DF)

Descriptors—*Competition, *Debate, Educational Philosophy, *Elitism, Higher Education, High Schools, Persuasive Discourse, Public Speaking, Qualifications, Speech Curriculum, Verbal Communication
Identifiers—Debate Coaches, *Debate Tournaments
Debate as an elitist activity can be defined in two ways: it may mean that entry to a tournament is restricted to only a few participants from any one school, or it may mean that although a wide range of students may participate in debate, only the best debaters are allowed to compete in prestigious national tournaments. The restriction on the number of participants from one school that may attend a tournament may be justified by a number of arguments, including the limited number of students that can be covered by any one judge at a tournament. The practice of sending only the finest debaters to national tournaments may also be justified by several arguments, such as the fact that the "star system" provides an incentive for debaters to work hard to become members of the traveling squad. An appropriate response to these rationalizations is that they have both positive and negative aspects and that the term "elite" may be placed in a broader perspective so that an egalitarian approach may be taken. In implementing that approach, debate coaches must take steps to make debate available to as many students as possible. These steps include hosting and attending tournaments that emphasize sound educational practices and staying actively involved in coaching and tournament judging. (DF)

**Contributions of Humanistic Psychology to Listening: Past, Present, and Future.**
Pub Date—Mar 86
Note—21p.; Paper presented at the Meeting of the International Listening Association Convention (San Diego, CA, March 13-16, 1986).
Pub Type— Information Analyses (070) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Communication (Thought Transfer), *Communication Skills, Higher Education, Interdisciplinary Approach, *Listening, *Psychology, *Research Needs, Speech Instruction, *Theory Practice Relationship
Identifiers—*Humanistic Psychology, Listening Theory
Noting that research and theory building in the area of listening have evolved from a variety of disciplines, this paper examines the contributions to listening theory made by humanistic psychology. The paper first offers an overview of humanistic psychology, examining some of the basic assumptions and postulates that serve as a foundation for "Third Force" psychology, an orientation emphasizing meaning and value in human life. It then discusses selected concepts that have been incorporated into listening theory, such as emphatic listening, mutual engagement, feedback, attending behaviors, and nonvaluative listening. The paper also presents an analysis of potential areas of further contributions for listening studies that have gone untapped or been given only cursory attention, including symbolization of experience, skill training, response studies, and perceived listening. The paper concludes with a call to scholars, theorists, and researchers to tap the potentially rich contributions of not only humanistic psychology, but also many other disciplines that relate directly and indirectly to the field of listening. **Simulation as a Teaching Method in Family Communication Class.**
Pub Date—19 Apr 86
Note—11p.; Paper presented at the Annual Meeting of the Central States Speech Association (Cincinnati, OH, April 17-19, 1986).
Pub Type— Speeches/Meeting Papers (150) — Reports - Descriptive (141)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Communication (Thought Transfer), Course Content, *Family Relationship, Family Role, *Group Dynamics, Higher Education, *Interpersonal Communication, Interpersonal Relationship, Nonverbal Communication, *Simulation, Social Cognition, Speech Communication, Speech Curriculum, *Teaching Methods
Simulation was used as a teaching method in a family communication class to foster a feeling of empathy with others. Although the course was originally designed to be taught as a seminar, the large number of students prompted the division of students into groups of five or six, characterized as families, each of which was to discuss concepts and issues in class and work on projects outside of class. The family groups developed their own networks of communication as the semester progressed. One advantage of using the simulated family system was that students began to identify with their group and to rely on the others for support in group discussion. Another was that the active discussion in the groups allowed students to discover and analyze their own communication behavior as well as that of others. Although some weaknesses did appear, such as the tendency to oversimplify a situation because of the narrowness of point of view and the length of time the simulation required, the strengths of using the simulated family systems outweighed the weaknesses. Descriptors—Graduate Students, Higher Education, *Media Research, *News Media, *News Reporting, Programing (Broadcast), *Radio
Identifiers—*All News Radio, *Audience Response
A study analyzed statistically the monotony of all-news radio listening and identified stylistic figures that elicit attention in listeners. Subjects were 30 graduate students whose experience with radio news ranged from occasional listening over several months to regular listening five or seven days per week for several years. Respondents were randomly assigned to one of four groups, each of which listened to one of two 30-minute spans of an all news station in an informal "coffee-and-doughnuts" setting. After listening, each participant was isolated in a cubicle with two tape recorders, one of which ran continuously. As the other replayed the broadcast, the subject identified content items and stylistic figures that had elicited attention in the initial listening and rated these elements on a nine-point scale. The similarity of patterns of attention to the two newswheel spans indicated the monotony of all-news listening. While statistical comparison of how relatively few auditors listened to two segments of programming can only be suggestive, it bolsters the impressions of casual monitoring, the findings of content analysis, and the extratextual evidence of all-news programmers' descriptions of the newswheel format. The statistical findings were particularly interesting because they objectively reflect listeners' experience of radio news as familiar and predictable-that is, monotonous. Change in newsroom voice and intonation variables also influenced listeners' attention. (HTH)

Descriptors—Class Activities, Competition, Higher Education, Internship Programs, *Public Relations, Speech Communication, *Speech Curriculum, *Teaching Methods, *Theory Practice Relationship
With the increased interest in public relations education, it is important for educators to be aware of options available for enhancing the effectiveness of teaching in this area. A number of nonprint learning resources are available, including internships, in-class campaigns, and national competitions. Public relations internships are essentially one-on-one teaching situations that offer real-world work experience while allowing students to integrate theoretical material with the development of practical skills. Many campuses or communication departments already have internship programs that could be expanded to include public relations. An alternate resource is an in-class public relations campaign, which can also help prepare students for their internships. This would involve dividing the class into public relations "firms," which would then compete to provide the best campaign for the designated client. The national competitions are an additional way to offer students practical public relations experience. Dependent upon each contest's regulations, it is possible to use the national competition as the in-class campaign assignment. Such competitions include the Philip Morris Marketing/Communications Competition, the Levi-Strauss Public Relations Challenge, and the Bateman Case Competition. (HTH)

Descriptors—*Debate, Faculty Advisers, High Schools, Persuasive Discourse, *Speech Communication, *Speech Instruction, *Student Characteristics
Identifiers—*Debate Coaches
A high school speech communication instructor who also coaches the debate team has drawn a number of conclusions regarding concurrent teaching and coaching. First, forensic programs generally take too much time and energy from classroom work, and an inordinate amount of relaxation and "recharge" time. Forensic coaches who teach need superhuman powers to continue long with the logistics of dealing with the different levels of debate skills and organizing competitions, and at the same time handle classroom paperwork while "on the road." Second, forensic programs may lead coaches to expect that the students they work with so closely in forensics have the same tastes and personality characteristics found in their classroom students. They soon discover, however, that forensic participants tend to be more dedicated to extra hours of work, and to have wider and more eclectic tastes and a more sophisticated level of appreciation for the arts than do classroom students. Third, forensic programs tend to make coaches almost unconsciously expect certain conventionalizations of the forensic world to carry over into classroom speaking. Generally, however, classroom audiences have not been conventionalized in the same manner. Fourth, forensic coaches have the opportunity to become very friendly with team members, but this can inhibit the maturity of participants, and can lead to perceived favoritism in the classroom. Finally, forensic programs stress styles, formats, and purposes that may be at odds with, or at least not include, very legitimate goals of classroom communication instruction. (HTH)

Descriptors—*College Curriculum, College Students, Communication Research, Higher Education, Interaction, Interaction Process Analysis, *Interdisciplinary Approach, *Interpersonal Communication, *Interpersonal Competence, Interpersonal Relationship, *Models, *Social Behavior, Social Cognition
A need exists for focusing on the development of social interaction skills across the college curriculum. Eight basic assumptions should be followed when attempting to develop students' skills: social interaction (1) is a major vehicle for learning; (2) assists students in developing a flexible range of effective behavior; (3) requires abilities that can be learned; (4) can be taught in and out of the classroom; (5) requires abilities that develop interdependently with abilities in communication, analysis, problem-solving, and valuing; (6) is enhanced by a shared framework of interaction concepts; (7) requires skills that are learned developmentally; and (8) requires skills that are learned and developed in context. These assumptions guided the development of a model of social interaction behavior in college students, by an interdisciplinary faculty team, with input from the entire faculty, at a small liberal arts college. Intended to help faculty understand the responses of students at different levels and to support student growth, particularly at transition points, the model is based on two primary

individual skills–receiving information and responding to it–and six group skills, including defining roles, developing solutions, and managing conflict. This model has helped college students develop social interaction skills. (Tables illustrating the model are included. (DF)

This document, prepared for the use of the Committee on Education and Labor of the House of Representatives, focuses on general provisions for education, beginning with the full text of the Department of Education Organization Act of 1979. This is followed by antecedent legislation, including the General Education Provisions Act; the Inspector General Act of 1978; Titles IV and VI of the Civil Rights Act of 1964 (covering desegregation of public education and nondiscrimination in federally assisted programs, respectively); Title III of the Age Discrimination Act of 1975; Titles VIII and IX of the Education Amendments of 1972 (provisions relating to student assignment or transportation and prohibition of sex discrimination); Title I, Part H of the Elementary and Secondary Education Amendments of 1966 (relating to racial imbalance and compliance with the Civil Rights Act of 1964); the Elementary and Secondary Education Amendments of 1969; Title II of the Education Amendments of 1974 (equal educational opportunities and the transportation of students); and Titles XIV and XV-C of the Education Amendments of 1978 (relating to overseas defense dependents' education). The volume concludes with the National Summit Conference on Education Act of 1984. (TE)

Identifiers—*New Jersey
Education professors are being attacked for the way they prepare people to teach. This criticism is not well founded; teacher preparation programs are being made scapegoats so that the public can avoid facing the hard facts that constitute the core of the problems within the teaching profession. Nowhere has the attack on teacher education been more sustained and yielded more drastic proposals than in the state of New Jersey. Much of this criticism has been motivated by politicians seeking to benefit from the publicity surrounding educational reform. National commission reports have focused nationwide attention on education, and the new Republican leadership in New Jersey has been eager to upstage the reforms set in motion by the previous Democratic administration. A panel established by the new education commissioner to determine the skills needed by beginning teachers was rigged to reflect the administration's position. An instate commission appointed to figure out how the panel's recommendations should be incorporated was also loaded in the commissioner's favor. The state eventually adopted a teacher education program that provided an alternative to the college programs. Even though this is an easier and cheaper way to train teachers, the commissioner may regret his victory. His program will be scrutinized and any evidence of deficiencies will be broadcast vigorously. (GJ)

Identifiers—Southern Regional Education Board
Recent trends in teacher education may eliminate courses in the cultural foundations of education from professional education curricula. The emphasis on the development of new teacher education programs and on teaching degrees that emphasize academic studies over professional education courses have led many governing bodies to question the need for such courses. The decline of student enrollment in traditional baccalaureate teacher education programs and other structural changes have also contributed to this trend. There is obvious disagreement about the nature of teacher education problems and their solution. The Southern Regional Education Board has recommended increased general education requirements, while rejecting a fifth-year requirement. Others have called for the elimination of undergraduate majors in education in favor of a combination of an academic major, an internship, and a master's degree in teaching. Another recommendation has been to restrict entrance to teacher education programs and to limit the number of colleges that train teachers. It is unlikely that many of the reform proposals will be implemented due to the lack of effective leadership. Education officials need to play a bigger role in determining what educators need to know and why. (GJ)

Identifiers—Education for All Handicapped Children Act
This paper reviews federal and state court interpretations of federal and state laws concerning the responsibilities of local school districts in providing free and appropriate education for handicapped children. Particular attention is paid to the building principal's responsibility in carrying out the mandated policies at the operational level, and his or her consequent liability (as a school employee rather than as an officer of the state) for any procedural failings. The cases selected focus on problems at the operational level related to student placement, program reevaluation, discrimination, transportation, misdiagnosis, the length of the school year, and students' needs for unusual assistance. Among the factors considered by the courts in judging these cases are the protection of students' due process rights, the efforts made by school districts to place students in the least restrictive environment possible, and the extent to which schools and school employees are protected from financial liability in cases involving improper placement of students. Descriptors—Copyrights, *Court Litigation, Discipline Policy, Discipline Problems, Legal Responsibility, *Plagiarism, Postsecondary Education, Student Behavior, Student Rights, Student School Relationship
The prohibition of student plagiarism by educational institutions creates problems associated with: (1) communicating acceptable practices for citing the works of others; (2) establishing appropriate penalties for those who do not follow the announced standards; (3) ensuring, through due process, the protection of the rights of those accused of plagiarism; and (4) avoiding violations of copyright law. This guide to institutional policy development considers both the academic and the legal issues involved in plagiarism cases. The first chapter pays specific attention to: (1) the promulgation of comprehensible definitions of plagiarism, (2) the provision of adequate notice of the existence of an institutional policy, (3) the legal importance of determining whether the plagiarism was intentional, and (4) the extent of the contractual nature of the relationship of student to institution. The second chapter looks closely at whether plagiarism is an academic or disciplinary matter and considers students' rights in disciplinary actions. The third chapter focuses on three legal issues involving copyrighted material: the ownership of student-produced plagiarized material, the "fair use" of copyrighted material, and the copyrightability of plagiarized material. Examples of plagiarism provided in Dartmouth College's student handbook are appended. (PGD)

Identifiers—South Carolina

Specific actions that schools, districts, and business groups can take to create effective cooperative programs are outlined and discussed in this manual. The booklet first cites national trends toward increased private sector involvement in education, then describes four activities mandated by South Carolina's Education Improvement Act of 1984 to increase cooperative efforts. The guide next presents a list of 29 ways in which community groups can assist local schools, including through donations, grants, sponsorship of activities, and offering training programs for students. Four ways of assisting entire districts are also listed. The guide next establishes six principles on which to base effective partnerships and examines the advantages that cooperative programs can provide to businesses and to students. The following sections of the guide present nine steps that businesses should take and 16 steps that schools should take when developing cooperative programs. Fifteen examples of successful programs operating in districts around South Carolina conclude the text. The guide also provides checklists to determine priorities of school needs and the nature of a business group's support, a model school board policy on partnerships, and samples of partnership contract and quarterly report forms. Eight and one-half percent of the school district superintendents in the United States responded to questionnaires in 1985 concerning their opinions about education, their roles and working conditions, their relations with school boards, their backgrounds and professional interests, and the characteristics of their districts. Tabulations of the results are presented in this report. The superintendents were selected through random sampling of their home districts, with additional districts selected to ensure statistically meaningful sampling of districts at all levels of enrollment. The data are compared in terms of enrollment levels, expenditures per pupil, superintendents' years of experience, community types, and geographical regions. The report discusses the survey methodology and its accuracy, presents a composite portrait of the typical superintendent, and compares large and small districts in terms of their superintendents' characteristics; then presents the tables of data themselves. The 46 tables are divided into seven groups, focusing on professional and personal characteristics, school district profiles, the status and objectives of education, professional development, factors detracting from quality administration, and personal satisfaction with the profession. Highlights of the findings are presented with each table. A technical note concerning survey confidence levels concludes the report. (PGD)

Identifiers—Collegiality, Pittsburgh School District PA

Professional development should be part of a teacher's job, and schools should make teacher development an integral part of the teacher's normal activities. Because schools are cooperative, collaborative enterprises, teachers should be involved in the establishment of development programs, should have professional responsibility for cooperating with each other to improve practice, and should not be made to compete for rewards. Development programs should eliminate such barriers to teachers' development efforts as (1) funding shortages that deny teachers both in-school time for development and adequate resources for study and professional interaction, and (2) assumptions that teachers should take responsibility for development individually. Examples of methods that fit the criteria suggested include those used in the Scheney High School Teacher Center in Pittsburgh, Pennsylvania; the employment of teachers as mentors rather than as "master teachers"; the engagement of a nonprofessional support staff to leave teachers free for professional concerns; the rescheduling of school time; and perhaps the coordination of in- and out-of-school time for development. The program should be more concerned with enhancing the teacher's professionalism than his/her specific technical skills, should involve an element of accountability, and should focus on pedagogy. **EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—*Administrator Qualifications, Administrator Role, Administrator Selection, Educational Improvement, Elementary Secondary Education, Job Satisfaction, Occupational Mobility, *Superintendents

Recent national reports on the status of education in the United States fail to analyze the relationship between the quality and qualifications of school superintendents and the quality of education. Superintendents appear to be hired all too often on the basis of who they know rather than of how qualified they are. Only 30 percent of the superintendents have obtained doctorates, and only 51.5 percent are certificated for their positions. Turnover among superintendents is high, affecting the quality of long-term educational development. To lessen turnover rates, an effort should be made to improve the working conditions that affect superintendents' levels of job satisfaction. (PGD)

Descriptors—*Change Agents, Elementary Secondary Education, Interpersonal Competence, *Job Skills, Skill Analysis, Training, Urban Education

Identifiers—New York (New York)

Preliminary findings of a study of assistance personnel, or "change agents," in urban school improvement programs, failed to show an association between the effectiveness of educational change agents and any particular skills they employed. The study did isolate a nummber of general and specific skills that study participants identified in change agents. The study sought to determine styles and approaches typical of successful agents, skills essential to guiding change, and methods that had proved effective for training outstanding agents. A conceptual framework was developed that related agents' entry characteristics and behaviors with the outcomes of the school improvement programs. Data were collected through 137 semistructured interviews and observations focused on the activities of 17 experienced change agents. Five of the agents participating were engaged in one school improvement program and six each were engaged in two other programs, all in New York City. The interviews were conducted with the agents themselves, with their clients in the schools, and with their program managers. The skills examined were suggested by interviewees and were organized into clusters. Among the general skills observed were interpersonal, training, group-related, writing, listening, content-related, and communicating skills. More specific were initiation, rapport-building, task-oriented, social psychological, educationally focused, and autonomy-increasing skills. Two data tables are included. (PGD)

Identifiers—Funding Formulas, *Illinois

The system used in Illinois for financing public education underwent major reform in 1973. At that time four alternative formulas for determining equalization aid levels were established. In 1980 three of these formulas were eliminated and only a modified version of the Resource Equalizer formula remains in use. This report provides an overview of some of the changes that have been made in this formula since its introduction in 1973. Six concerns that the Illinois financing reforms have attempted to address are noted, including student equity, taxpayer equity, local control, areas of high poverty, equitable treatment for districts of different types, and adequate dollar levels for state funding. Three factors built into the Resource Equalizer formula are also clarified: pupil attendance, assessed valuation, and tax rate. The formula itself is presented, and the three alternative formulas available prior to 1980, including the Strayer-Haig Equalization Formula, are also shown. Appendixes include a display of the impact of the grant-in-aid system on state

educational finance from 1977 to 1986, amendments to formulas as of 1980, and a selected bibliography. (PGD)

Identifiers—*Illinois
The school finance equity efforts that began in Illinois in the early 1970s collapsed during the early 1980s, partially as a result of poor economic conditions affecting the entire state budget. This monograph opens with a review of the school finance reform events that have unfolded in Illinois since 1973, when major reforms were first enacted into law. The monograph then describes the underlying values, focused around equalization of educational opportunity, according to which the effects of the 1973 reforms and the subsequent modifications of those reforms should be evaluated. A description of procedures used to monitor school finance equity in Illinois follows, and the results of the monitoring process are analyzed. The monograph concludes with an assessment of the forces working against a concern for equity in Illinois school finance and reviews the "wave theory" of revolution and reform, a theory that suggests that efforts to change and efforts to resist change alternate in their influence through history. Appendixes contain charts and tables documenting the findings of the equity monitoring process. Factors in the computation of Gini coefficients are also appended. (PGD)

The recent thinking of 20 experts in the field of school improvement is represented in this collection of essays. The authors have participated in studies from the national level to the single school level, have been involved in past and present reform efforts, and have contributed to educational policy and theory. In this book they go beyond their previous thinking to consider new avenues to school improvement. The first section of the book comprises essays that extend and refine old ideas. The essays and their authors are: "The Preparation of Teachers Revisited," by Seymour Sarason; "How Do We Think about Our Craft?" by Maxine Greene; "Seductive Images and Organizational Realities in Professional Development," by Judith Warren Little; "Mutual Adaptation and Mutual Accomplishment: Images of Change in a Field Experiment," by Tom Bird; "Rethinking the Quest for School Improvement: Some Findings from the DESSI Study," by A. Michael Huberman and Matthew B. Miles; "Reconstruing Educational Innovation," by Louis M. Smith, John J. Prunty, David C. Dwyer, and Paul F. Kleine; and "School Improvement: Themes and Variations," by Ann Lieberman and Lynne Miller. The book's second section focuses on fresh ways to think about school improvement. These essays and their authors are: "Educational Change: Revival Tent, Tinkertoys, Jungle, or Carnival?" by Terrence Deal; "Teachers and Mothers: Facing New Beginnings," by Karen Kepler Zumwalt; "Images of Schools," by Phillip C. Schlecty and Anne Walker Joslin; "Teacher Evaluation and School Improvement," by Milbrey Wallin McLaughlin; "Interactive Research and Development: Partners in Craft," by Joann Jacullo-Noto; "Teacher Directed In-Service: A Model That Works," by Judith Schwartz; and "Beyond the Commission Reports: Toward Meaningful School Improvement," by A. Harry Passow. (PGD)

Identifiers—California, Excellence in Education
This book presents the case for traditional education and discusses the public's role in making education effective. The opening chapter introduces the concept of traditional education, noting its emphasis on the development of a command of language and formation of moral character, and placing the call for traditional education in a historical and practical context. The second chapter considers the purpose of public schools historically and today. The third chapter goes into greater detail to define traditional education and describes how it serves to develop superior workers, active citizens, and fulfilled individuals. Chapter Four rejects the argument that the "excellence in schools" movement is unfair to minorities. The importance of providing moral guidance without religious indoctrination is the topic of the fifth chapter. The sixth chapter outlines the move toward reforming education in California along traditional lines under the state superintendent elected in 1982. The book's remaining chapters look at ways educators, parents, institutions, and the general public can each contribute to the excellence movement. Chapter Seven considers shared responsibilities, Chapter Eight concentrates on teachers, Chapter Nine focuses on parents, Chapter Ten discusses the roles of governmental and private institutions, and the eleventh chapter reflects on the optimism associated with the reform movement. The Composite Indicator of Changes (CIC) in average salaries and wages paid by public school systems is a statistical measure prepared by the Educational Research Service, Inc., to gauge and compare salary changes and analyze salary trends in individual school systems, groups of school systems, and nationally. This report describes the development, computation, and use of the CIC, and also reports on salary and wage changes for the decade from 1975-76 to 1985-86. The data are broken down to allow comparisons of the amounts of change among six component groups of school personnel, among comparable school systems, and with economic indicators such as the Consumer Price Index. The groups of school personnel compared are central office administrators, building administrators, classroom teachers, auxiliary professional personnel, secretarial and clerical personnel, and other support personnel. School systems are grouped for comparison by district enrollment. Instructions are provided for using the CIC to compare local salaries and wages with comparable data at the local, state and national levels. Twelve tables, nine figures, and worksheets for developing local data support the text. (PGD)

Exposure to asbestos in the air poses serious health threats, particularly to children. The use of asbestos in schools after World War II may have exposed millions of persons before regulations controlling asbestos use began appearing in the 1970s. Federal efforts to reduce exposure to asbestos have included passage of the Asbestos School Hazard Detection and Control Act of 1980 and the Asbestos School Hazard Abatement act of 1984, as well as regulations promulgated by the Environmental Protection Agency (EPA) in 1982. The federal government's failure to pursue or provide funding for its asbestos abatement programs adequately has forced schools to go to court for relief, and court decisions have substituted for regulations. Asbestos litigation can involve traditional theories of negligence, conspiracy, nuisance, enterprise liability, strict liability, and breach of warranty, as well as equity and bankruptcy law. Schools seeking relief should consider all theories of liability and all potential defenses of such suits. Schools unsuccessful in litigation or in applications for government assistance should strongly consider engaging in asbestos abatement in any case, given their potential liability in personal injury suits. Several relevant court cases are cited. (PGD)

Identifiers—*Educational Production Function
A review of effective schools studies suggests that the research should continue but the methodology must change if the studies are to gain credibility. The first of this paper's three sections explains the educational production function in terms of the microeconomics of education. The measurement and classification of such function variables as output measures and the characteristics of students, schools, and homes are explained. The second section reviews relevant studies and focuses on the importance of socioeconomic status as a predictor of

school achievement. Variations in production functions related to different types of schools are considered. The third section explores problems and issues related to studying productive and effective schools. Methodological weaknesses severely limiting the value of research are noted, with examples drawn from the literature. The paper concludes with suggestions for further research, particularly on the relationship between socioeconomic status and educational achievement. (PGD)

Descriptors—*Block Grants, Elementary Secondary Education, Federal Aid, *Federal Legislation, Federal Programs, *Finance Reform, Financial Support, *Government School Relationship, Grants, Parent Participation, *Program Effectiveness, School Support, State Federal Aid

Identifiers—Department of Education, *Education Consolidation Improvement Act Chapter 2

Chapter 2 of the Education Consolidation and Improvement Act (ECIA) of 1981 consolidated 28 separate federal education programs into a single block grant. This report evaluates the effectiveness of Chapter 2 as public policy, assessing whether it has led to improvement in education, whether the consolidated programs are more responsive to community needs, and whether the block grant approach is an effective way to deliver educational services. First, the report provides a brief history of federal education programs, explaining how Chapter 2 relates to and has changed federal policy. Then the findings to date are reviewed--who won and who lost, where the money goes, and what it is spent for. The results of the Education Department's monitoring of state Chapter 2 administration are described. The subsequent two chapters are organized around major issues that have surfaced: parent and public involvement, distribution formulas, support for desegregation, the role and authority of state education agencies, and private school participation. The conclusion suggests that the success of Chapter 2 depends on the extent to which communities make their needs known; therefore a list of recommendations is presented for changes in program structure and requirements that would promote greater local participation, and a guidebook is attached for parents and citizens on how to participate intelligently in Chapter 2 decisions. Appended is the text of ECIA Chapter 2, along with pertinent statistical data, reports, correspondence, and references. (TE)

Identifiers—Mueller v Allen, Supreme Court, *Witters v Washington Dept of Services for Blind

This newsletter consists primarily of a legal review of the Supreme Court decision in "Witters v. Washington Department of Services for the Blind" (January 27, 1986), in which unusually clear guidelines are set forth for a constitutionally acceptable program of educational assistance that may include parents whose children attend religious schools. In "Witters," a unanimous Supreme Court relied on the three-part purpose-effect-entanglement test to contend that a Washington State program for vocational aid to the handicapped had a clearly secular purpose, regardless of whether recipients of that aid used it to attend a religious school. This case is reviewed in the context of "Mueller v. Allen" (1983), which upheld a Minnesota law allowing an income tax deduction for tuition, textbooks, and transportation expenses incurred in the education of all elementary and secondary school students--public, private, or private/religious. An emerging standard is outlined based on seven rationales provided by Justice Marshall for approving the Washington program in "Witters." The Supreme Court will not accept any attempts by states to directly support religious schools or teachers, but it will attend primarily to the actual purpose served by any legislative plan that directly or indirectly includes religious schools. It is concluded that these two cases provide strong judicial precedents for an educational policy that emphasizes the needs and rights of individuals (including parents and family), rather than institutions. A brief column, "Notes and News," is also included in the newsletter. (TE)

Descriptors—*Core Curriculum, Curriculum Design, Design Requirements, Educational Facilities, Elementary School Curriculum, Elementary Secondary Education, English Curriculum, Mathematics Curriculum, Minimum Competencies, Required Courses, Secondary School Curriculum, Special Education, *State Curriculum Guides, *State Programs, State School District Relationship, *State Standards, *Statewide Planning, Textbooks, Vocational Education

Identifiers—*North Carolina, North Carolina State Board of Education

This document describes the basic education program for the state of North Carolina, as revised by the North Carolina State Board of Education. The first section describes a fundamentally complete program of instruction that would give the student a thorough grounding in the following areas: the arts, communication skills, healthful living, mathematics, media and computer skills, science, second languages, social studies, and vocational education. Basic curricular goals for these areas are set forth in four sections, covering grades K-3, 4-6, 7-8, and 9-12, respectively. (Vocational education is provided only in grades 7 to 12.) The second section covers programs not confined to subject areas: curriculum for exceptional children, the extended day program, remedial and compensatory efforts, in-school suspension programs, student services and library/media programs. The third section sets forth general standards for promotion, minimum competencies, instructional time, the school year, and graduation requirements, while the fourth section lists allotments for material support and standards for educational facilities. The final section lists state requirements for staffing at the district and school levels, along with allotment of state funds for staff development and an explanation of staffing ratios and class sizes. Appended are lists of state-approved elementary and high school textbooks and a list of suggested high school electives. (TE)

Descriptors—*Administrator Evaluation, *Correlation, Educational Environment, Elementary Secondary Education, *Evaluation Criteria, Evaluation Methods, *Instructional Leadership, *Principals, School Effectiveness, Surveys, Teacher Administrator Relationship, Teacher Attitudes, Validity

Identifiers—DeKalb School District GA, *Profile for Assessment of Leaders

The DeKalb County (Georgia) School District has developed a leadership assessment program called the Profile for Assessment of Leaders (PAL) that assesses eight generic competencies: (1) relating to other people, (2) communicating effectively, (3) making decisions, (4) planning and organizing, (5) supervising and evaluating, (6) professional growth, (7) protecting time on task for teacher and student, and (8) holding high expectations of students and teachers. To validate the PAL instrument, the researchers correlated the results of the PAL administrations to district staff over the past two years with those of two other instruments--the DeKalb School Climate Survey and the Time-Off-Task Teacher Survey. The data generated by these three instruments were used in three correlational studies: (1) to determine if the principal's behavior (as scored by his or her staff on the PAL) had any relationship to the time-off-task factors indicated by these teachers; (2) to correlate the PAL scores generated by the staff on the eight generic competencies with the DeKalb School Climate Instrument; and (3) to determine if the total scores on the PAL had any relationship to student test scores, student absences, or teacher absences. Results are tabulated and discussed in detail for each of the three correlational studies. The purpose of the instrument--to identify strengths and weaknesses of principals for the purpose of improvement--was validated, by and large, by these studies. References are included. (TE)

Descriptors—*Administrator Education, *Administrator Role, *Decision Making, Elementary Secondary Education, *Inservice Education, Instructional Films, Management Development, Single Concept Films, *Stress Management, Workshops

Identifiers—Making of a Decision (Film)

This paper is a brief description of a conference presentation consisting of a 2.5-hour clinic session on decision-making. A motion picture, "The Making of a Decision," followed by a lively discussion, was used to illustrate the strenghts and weaknesses of administrators in their decision-making process. Presented in the film are three different ways that administrators act when in doubt about their decisions, and three different ways they handle their anxieties and stresses. After viewing the first half of the motion picture, the participants listed the strengths and weaknesses three managers portray in their decision-making skills. The participants then viewed the supervisor of these three managers conducting appraisal conferences with each of them, helping them to identify their own weaknesses in decision-making. The participants then assumed the role of the supervisor and made a decision. After a thorough analysis of the content of the motion picture by the presentor and the participants, each participant listed several specific ways they could immediately improve their decisions and reduce their stress levels. Identifiers—Delaware, Maryland, New Jersey, Pennsylvania, *Research for Better Schools Incorporated
This document comprises the final report of the Regional Exchange project, through which Research for Better Schools (RBS) has provided research-based information, technical assistance, and training services to the states of Delaware, Maryland, New Jersey, and Pennsylvania, to assist state educational leaders in developing and implementing policies and programs aimed at improving local education agencies and their staffs. The first part of the report provides a brief review of RBS's history of working with state educational leaders, highlighting its goals and some of the ways it has conducted its activities. The second part describes eight case studies selected to reflect educational improvement priorities to which RBS has contributed over the past three years. These descriptions illustrate how state educational improvement priorities came into being; how a laboratory can contribute to the design, development, implementation, and institutionalization of programs that address those priorities; and what the outcomes of such collaboration can be for state and local educational agencies. The third part summarizes some of the understandings that RBS has developed about states, about RBS itself, and about the conditions that allow laboratories to contribute constructively to state educational improvement priorities. The last part presents several recommendations based on these understandings. Two appendixes are included: (1) a five-part summary of the information provided in the 1983 and 1984 annual reports and the 1985 quarterly reports; and (2) a summary of the RBS pilot project to help local education agencies assess current practice in light of educational research and development. Identifiers—*Megatrends
Beginning with the contention that the principal is the pivotal person in bringing about school improvement, this paper reviews several of the trends discussed in John Naisbitt's "Megatrends" and assesses their significance for public education in general and for the role of the principal in particular. These trends include (1) the shift from an either/or society to one where multiple options are the rule; (2) the change from a centralized to a decentralized society; (3) the move from the family to the individual as the basic unit of society; (4) the trend from representative to participatory democracy; (5) the shift from short-term to long-term thinking; and (6) the change from a national to a global economy. A review of these trends is followed by a discussion of the current public concern over the quality of education and an evaluation of some of the more popular proposals for school improvement, including merit pay, teacher testing, differentiated staffing, and partnerships with business. In conclusion, five general suggestions for school improvement are offered: (1) tougher academic standards, (2) instruction geared to individual learning styles, (3) expanded counseling programs, (4) professionalization of teaching, and (5) responsibility training for students. Identifiers—Canada
This study examines the organizational structures of schools and school systems using six complementary but distinct perspectives–societal, intentional, structural, analytical, portrait, and narrative–in order to ascertain the appropriateness of structural revision in relation to changes in Canadian society. Following an examination of the assumptions behind many hierarchical organizational structures and the effects of these assumptions on individuals, some different and potentially creative assumptions are explored, which emphasize the individual rather than the organizational imperative. Temporary structures and collateral organizations are presented as suitable for experimentation with these new assumptions. Administrators are urged to examine educational structures in light of these considerations. (TE)

Identifiers—*Brentwood Junior High School MO
This paper describes a discipline plan at Brentwood (Missouri) Junior High School based on firm and consistent enforcement of rules and regulations that have been developed cooperatively by principal, faculty, and students. The principal holds monthly faculty meetings where all students who are experiencing academic or behavioral difficulties are discussed by the entire group to decide an appropriate course of action. The behavior modification plan includes both negative and positive reinforcements. Negative reinforcers include contracts for students who refuse to behave or perform in class, homework assignment sheets to inform parents of assignments, study hall for students who do not turn in homework, Saturday detention for students who break rules as outlined in the student folder, and class contracts developed between the principal, teacher, and class. Positive reinforcers include the ice cream social, honor roll gallery, "Thank U Gram," Eagle awards, Academic Awards Night, special days, Senior Citizens Day Luncheon, complimentary letters to parents, and faculty telephone calls complimenting students. This document comprises the General Accounting Office's (GAO) report to the House Subcommittee on Intergovernmental Relations concerning the GAO's review of the contract awarding process of the National Institute of Education (NIE) for fiscal year 1983. The review focused on 39 of NIE's 52 newly negotiated procurement contracts; a sample of purchase orders for commissioned papers on topical education problems and issues were also reviewed. This report is presented in the form of summary responses to six specific questions from the subcommittee regarding NIE's procurement activities. The questions concern (1) how often NIE has revealed the number of proposals received, prices, cost ranges, or government cost estimates to bidders; (2) how often NIE has awarded contracts to other than lowest-priced bidders; (3) how often the Director of NIE has made the award decision; (4) what percentage of NIE contracts were awarded competitively; (5) how many contracts NIE awarded at the end of the fiscal year; and (6) how many Department of Education personnel have been employed by NIE contractors. A lengthy appendix assesses NIE's contract award processes in detail, covering (1) its scope and methodology; (2) competitive contract awards, with specific attention to requests for proposals (RFPs), awards to other than lowest offeror, and contract awards decided by NIE Director; (3) four noncompetitive contract awards deemed unjustifiable; (4) contracts awarded at year-end; and (5) employment relationships between Education Department employees and NIE contractors. Descriptors—Educational Objectives, *Educational Policy, Educational Principles, Elementary Secondary Education, *Government School Relationship, *Language Typology, *Policy Formation, Program Implementation, State Licensing Boards, State School District Relationship, *State Standards, Statewide Planning
Identifiers—Vermont
This case study was undertaken in order to discover if there are different types of policy language, and, if so, to describe relationships betweeen policy language types and policy implementation. Content analysis of three drafts of the state educational policy, "Standards for Approving Vermont's Public Schools," demonstrated the presence of three types of policy language: philosophical (which describes a goal), professional (which describes the desired output of an activity), and prescriptive (which mandates an activity or stipulates certain conditions). During the policy making process, individuals and interest groups attempted to influence policy by shifting statements from one language category to another. Content analysis revealed random discrepancies between the approved policy and regulatory guidelines. Policy language type had minimal impact during policy implementation by school personnel, unless significant implementation conditions were present. For external evaluators, however, policy language type evoked differential responses. The study concludes that policy detached from the conditions for implementation is not likely to be reflected in school practice. (TE)

Descriptors—Administrative Policy, Educational Administration, Educational Assessment, Educational Objectives, *Educational Policy, Formative Evaluation, *Management Systems, *Models, *Organizational Communication, Organizational

Objectives, Program Evaluation, Program Implementation, Summative Evaluation, *Systems Approach
Identifiers—Beer (Stafford)
This paper documents the development of a conceptual framework to ensure that the necessary steps are undertaken for effective policy implementation. These steps include the articulation of policy, the translation of policy into procedures, the operationalizing of those procedures into rules, and then both internal (formative) and external (summative) evaluation. The flexible framework incorporates an adapted version of Stafford Beer's model of recursive systems to illustrate the hierarchical but interdependent levels or groups of people involved in a statewide or provincial educational system, where policy is often initiated at one level to be carried out by representatives at another level. Not only does such a framework assist in the communication of policy, but also it is developed to encourage the ongoing evaluation of policy at different levels of the system. References and figures are included. (Author/TE)

Descriptors—*Consultation Programs, *Educational Innovation, Elementary Secondary Education, Information Dissemination, Instructional Improvement, *Instructional Leadership, Linking Agents, Professional Services, Program Implementation, *Research Utilization, *Technical Assistance
Identifiers—*Achievement Directed Leadership, *National Institute of Education
This report summarizes the development, testing, and dissemination of an instructional improvement program called Achievement Directed Leadership (ADL) during the period of National Institute of Education (NIE) funding for ADL, from late 1977 to late 1985#A brief introductory chapter discusses the context and rationale for the work on ADL, whose major purpose was to help school districts to understand, install, implement, and sustain practices that research suggests are conducive to effective instruction. The second chapter gives a brief overview of ADL, describing its major objectives: (1) to identify from the research a manageable number of variables that educators can influence and that are critical to student achievement; (2) to develop methods and materials to help educators monitor those variables; (3) to develop a plan for district-wide training and implementation of the monitoring and management processes; (4) to develop a means to support wide scale dissemination; and (5) to contribute to knowledge. The third chapter discusses the pros and cons of some of major issues related to instructional improvement through ADL, local use of ADL, and wider dissemination of ADL. The concluding chapter presents a closing statement on the instructional effectiveness issues, touching on the need for reflection on the ADL experience and summarizing its major messages as they relate to the creation of optimal classroom conditions and to maximizing the effectiveness of teachers' inservice. It is pointed out that the persistent, appropriate use of such innovations as ADL are likely to develop the needed understandings, images, intuitions and skills. References are included, along with appendixes listing (1) ADL-related reports, papers, and presentations, and (2) student achievement data from the three field test districts in Pennsylvania, New Jersey, and Delaware. Identifiers—*Jackson Municipal Separate School District MS
The committee that produced this report was asked to examine two major concerns: (1) that criteria for participating in various extracurricular activities were inconsistent between schools; and (2) that criteria for participating in all extracurricular activities (including athletics) contribute to the overall mission of teaching and learning in Jackson (Mississippi) public schools. Accordingly, this final report begins with a brief review of the literature on criteria for extracurricular activities, followed by selected testimony on this topic from Jackson citizens and from school personnel. The subsequent section reports committee findings with respect to: (1) the number, percent, and rank of students participating in extracurricular activities at each secondary school in the district; (2) most and least available extracurricular activities in the secondary schools; (3) current criteria for participation per school and by district policy; (4) criteria for participation in selected states; and (5) criteria for participation in athletics as set forth by the Mississippi High School Activities Association (MHSAA). The final section provides the committee's recommendations for specific actions to be take by the Board of Trustees and the Superintendent of Schools regarding participation criteria, along with concluding remarks. Appended are a list of extracurricular activities in the district, a note on averaging summer school grades with second semester grades, and a sample form for reporting student eligibility. (TE)

**The Concept of Curriculum Design.**
Pub Date—Jun 84
Note—20p.; Paper presented at the Annual Meeting of the Canadian Society for the Study of Education (Guelph, Ontario, Canada, June 1-4, 1984).
Pub Type— Opinion Papers (120) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Curriculum Design, Educational Assessment, *Educational Philosophy, *Educational Principles, Elementary Secondary Education, Epistemology, Fundamental Concepts, Values
This paper approaches the concept of curriculum design from a philosophical perspective, arguing that the concept of "design" in curriculum is fundamentally misleading. The paper begins with a series of comments questioning the assumption that curriculum design involves a set of discrete skills or procedures in which one may attain expertise, like skating, welding, or filling out a tax return. The concept of curriculum design is equivocal on the distinction between the intrinsic value and the practical success of a curriculum, with the result that questions of evaluation and implementation are often allowed to determine content, without adequate consideration of what is educationally worthwhile. Curriculum design is an open and flexible domain due to uncertainty and disagreement over ends, definitions, and cause and effect. Counterarguments are offered to four of the most commonly accepted assumptions behind the curriculum design concept: (1) that the ultimate aims of education are not the direct responsibility of the curriculum designer; (2) that curriculum design is an applied science; (3) that designing curriculum is a skill or set of skills; and (4) that there is a determinate list of things that a curriculum design should include. The most important omission from all curriculum textbooks is a rigorous examination of the aims and nature of schooling and education. (TE)

Descriptors—Educational Environment, *Educational Facilities Planning, Elementary Secondary Education, *Facility Guidelines, *Facility Requirements, *Space Utilization, State Legislation
Identifiers—*Oklahoma
In 1983 the Oklahoma Legislature adopted facility guidelines for the purpose of defining, organizing, and encouraging the planning of adequate environments for education. The guidelines contained in this booklet have been designed to allow for the requirements of all Oklahoma school districts regardless of size or educational program. The guidelines are arranged under the following categories: instructional spaces, auxiliary spaces, and service and structure spaces. Preliminary space planning guidelines for calculating net and gross footages for school buildings are listed for elementary schools, middle schools/junior high schools, and high schools. Space requirements for specific instructional spaces follow for each of the three levels by student capacity, square feet per student, acceptable minimum total net area in square feet, and recommended total net area in square feet. Acceptable minimum and recommended site development and site planning guidelines follow. Requirements for overall play activity sites, fixtures, and toilet fixture guidelines conclude the publication. (MLF)

Identifiers—Disruptive Behavior, Newport News Public Schools VA, *Project PR
Students in the Newport News (Virginia) high schools who are absent from classes frequently without excuses or who are consistently disruptive are transferred from the regular program to an after-school program that meets at a different site. These transfers are effective for at least 2 months and students may only be rotated back at the end of a semester. The students take four classes, have no free time, and are denied access to their home schools. The purpose of the program, called Project P/R, is to deny truant students the social aspects of schooling that they desire until they improve their behavior. Support for the project was elicited from the police and the judiciary. The program has proved successful: attendance climbed 1.9 percent in just 8 months, in-school suspensions fell 49 percent, the dropout rate declined from 5.9 percent to 3.7 percent, out of school suspensions were down 41 percent, and fewer crimes were committed by students. The program allowed elimination of four teachers handling in-school suspensions (saving $50,000 a year), reduced administrative time devoted to discipline and attendance by 50 percent, and raised teacher morale. A detailed description of the program is appended. (PGD)

Descriptors—Case Studies, *Industrial Training, Inservice Education, Motivation, Organizational Climate, *Staff Development, Teacher Education
Ten separate articles reviewing the training programs operated by 10 corporations and agencies are collected in this booklet. The articles describe the programs and assess their implications for teacher education. An introduction and a summary of the implications complete the document. The titles and authors of the articles are "Introduction: Corporate Training in Perspective," by W. Robert Houston; "Arthur Andersen & Co., Societe Cooperative: Implications from a Big-Eight Accounting Firm," by

David M. Byrd, Sharon A. Shrock, and Oliver W. Cummings; "Promoting High Standards Through Training in M. D. Anderson Hospital Division of Nursing," by Hersholt C. Waxman; "Attention to Detail Characterizes Training at the Boeing Company," by Theodore E. Andrews; "Knowledge, Physical Ability, and Integrity Through Training in the Border Patrol," by Robert E. Wright; "The Disney Approach to People Management and Training," by Fanchon F. Funk, Deede Sharpe, and Mildred M. Usher; "Training Programs for Current and Laid-Off Workers at General Motors," by Glenora Irwin Andresen; "Becoming a Sales Representative for Harris-Lanier Thought Processing Division," by Renee Tipton Clift; "Monday Night Motivation at Mary Kay Cosmetics," by Douglas M. Brooks and Kathy Bristow; "Motorola: Multiple Training Programs for Worldwide Microelectronics Manufacturing," by Elizabeth S. Manera; "Southern Company Services, Inc: Successful Employee Development," by Janet Towslee Collier; and "Congruency Between Purpose and Practice in Education," by W. Robert Houston and Billy G. Dixon. Among the conclusions drawn are that (1) administrators should understand and be capable of performing the roles of those under them, and should occasionally perform those roles; (2) new personnel should receive careful supervision and training in the procedures of the organization; (3) operational units should be given responsibility for and held accountable for their own specific functions; (4) an effort should be made to draw personnel into the organizational culture and obtain their commitment to it; (5) personnel should be kept well informaed of developments affecting the organization; (6) continued professional development is essential; (7) opportunities for career growth should be made available; and (8) the motivation of personnel is very important. Descriptors—Elementary Secondary Education, *Evaluation Criteria, Evaluation Methods, *Public School Teachers, School Districts, State Surveys, *Teacher Evaluation

Identifiers—*Tennessee

The types of teacher evaluation instruments used in Tennessee's public school systems during 1982-83 were reviewed to determine how they related to other district characteristics. Districts were categorized according to whether they (1) negotiated teacher contracts, (2) spent above the state median per pupil, (3) paid teachers above the state median salary, (4) elected or appointed their superintendents, (5) were county or city/special districts, and (6) reported average daily attendance above the state median. Instruments were categorized as using rating scales, checklists, performance objectives, anecdotal records, a combination of scales and objectives, or other methods. Evaluation criteria were grouped into four content types: personal qualities, professional qualities, instructional skills, and classroom management and discipline skills. The study found that 57.4 percent of the districts used rating scales and 34.9 percent combined rating scales with performance objectives. The tendency to use rating scales alone was lower among districts paying higher salaries, appointing superintendents, and operating as city/special districts. The most frequently cited evaluation criteria related to professional cooperation, effective planning, and student control. Systems paying higher salaries considered more instructional skills items, as did city/special systems. The mean number of items evaluated was 30. (PGD)

This document reports the proceedings of a 1985 conference on preventing the legal problems that could grow out of the implementation of career ladder and merit pay programs for teachers. The contents of the report include a welcome by Preston C. Kronkosky; an overview by Virginia Koehler of the goals, characteristics, and demands of career ladder and merit pay plans; reviews by state legislators or legislative staffers of the state legislation regarding such plans in Arkansas, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas; and a brief discussion of some of the points covered in the legislative review. The report then presents addresses on "The Teachers' Perspective on Career Ladders and Merit Pay," by Karen Lee Johnson; "The Administrators' View on Career Ladders and Merit Pay," by Joe E. Hairston; "Preventive Law: Its Application to Career Ladder Policies," by William C. Bednar, Jr.; and "Local Education Agency (LEA) Perspectives," by Kelly Frels. Questions and responses raised in discussion among these speakers are presented next. "National Perspective: Liability and Risk for LEAs," an address by G. Ross Smith, completes the report. Among the topics addressed at the conference are planning, the attitudes of those affected, needs for local level commitment, possible conflicts, teacher evaluation, the nature and potential of a preventive law approach, client-lawyer relationships, and legal liability. Appendixes present the conference agenda, biographical data on the presenters, and addresses of conference participants. (PGD)

Identifiers—Illinois Specialized Teacher Evaluation Programs

Illinois Specialized Teacher Evaluation Programs (I-STEP), Incorporated, has developed a performance-based system for evaluating teachers. A review of the literature convinced I-STEP that evaluation programs are most useful if they are aimed at helping teachers improve their instructional effectiveness, and if they obtain evaluation data from many sources. The I-STEP method involves collecting information from students (who have extensive experience with teachers but no training in pedagogy), outside observers (with good understanding of teaching practice but little contact with the individual teachers' instruction methods), and the teachers themselves. All these observations must be cross-compared to develop reliable assessments of teachers' strengths and weaknesses. The instruments used by each group of observers is designed specifically for that group, and those used by the classroom observers are divided into six subtypes depending on the nature of the instructional situation being observed. Implementing the I-STEP program involves consultation among I-STEP representatives, teachers, and administrators; planning and scheduling; teacher orientation; the evaluation process itself; data analysis; reporting of results; and the provision of feedback to teachers and administrators for use in evaluation conferences and improvement efforts. Identifiers—Debt

This report provides statistics for the 1982-83 fiscal year on the revenues, expenditures, debt, and financial assets of public school systems, including public higher education, in the the United States. The information, collected by the U.S. Census Bureau, is presented for the nation as a whole, for the states, and for individual school systems with enrollments of 15,000 or more. The report consists of two parts: an introduction and a set of tables. The introductory section describes the scope of the Census Bureau's school finance data collection activities, major findings of the 1982-83 survey, and sources and limitations of the data. The nine tables present national totals of public school financial data (tables 1 and 2), sources of revenue and allocations of expenditures by the states (tables 3 through 6), state totals for indebtedness and cash and security holdings (table 7), and financial statistics for large school systems (tables 8 and 9). Among the general findings of the survey were that revenues increased by 5.1 percent and expenditures by 6.2 percent over the previous year, and that both federal and state financing dropped while local support rose. Definitions of selected terms are supplied. (PGD)

Identifiers—Texas

School systems interested in improving teacher performance, effectiveness, and job satisfaction while reducing turnover rates might do better to seek ways to enhance the intrinsic rewards of teaching rather than implement such extrinsic motivators as merit pay plans and career ladders. A review of the research literature brings several important considerations to light: (1) teachers tend to oppose merit pay plans, though they may accept a performance-based component among several criteria determining salary increases; (2) the success of merit pay plans in the private sector is debatable; (3) money is an uncertain motivator among teachers; (4) teachers are not all motivated by the same needs and desires; (5) conditions affecting motivation are continually changing; (6) people often enter the teaching profession to obtain intrinsic rewards related to service and self-esteem; (7) the availability of external motivation often inhibits the effects of intrinsic motivation; and (8) merit pay and career ladders tend to deprofessionalize teaching. Intrinsic motivation for teachers as professionals can be enhanced through such processes as performance appraisal interviews, appraisal and development of potential, feedback and performance coaching, career planning, training, organizational development, rewards for specific contributions, employee welfare programs, and use of human resources databanks. Frequently administrators must spend time producing documents and reports, though theoretically they are supposed to use information to create better educational environments and experiences for students. By using the personal computer as a tool for tasks and analyses that, before the computer, used to take days, administrators will have time to utilize their higher order thinking skills–evaluation, conclusion, and application. The specific administrative areas that a computer can handle better than a person include ordinary typing tasks, student and personnel information processing, and financial recording and planning. Word processing programs and database programs will expedite these tasks. Listed are 10 programs, primarily ones that run on the Apple IIe or Apple IIc systems, and the sample tasks shown as part of the presentation. (MLF)

Identifiers—*Establishment Clause, *Prayer, Supreme Court

Questions arise about the constitutionality of including some form of prayer, usually an invocation or benediction, in public school graduation ceremonies, and whether such prayer can appropriately be delivered by a minister or other religious leader. The U. S. Supreme Court has not addressed this precise issue, but an analysis of other courts' decisions, and related Supreme Court precedents, may help educators to assess the factors involved in assessing the constitutionality of this widespread practice. Arguments against prayer at graduation ceremonies are based on the Establishment Clause of the First Amendment that reads: "Congress shall make no law respecting an establishment of religion...." An examination of the cases cited indicates that the outcome of a commencement exercise challenge appears to hinge on the evidence of school district involvement designed to advance religious purposes. Without aggravating circumstances, a court would seem to be unlikely to find an Establishment Clause violation in the context of the traditional ceremonial nature of commencement exercises. Administrative practices do affect teacher morale, according to a study conducted by Phi Delta Kappa. This handbook describes the study and its findings, presents a review of the relevant literature, and proposes specific methods administrators can use to improve staff morale. The book's first chapter describes the study's objectives: to identify the characteristics of school systems successful in achieving or maintaining high morale, to identify instruments useful for morale evaluation, and to produce a handbook of useful practices. The chapter also describes the study methodology, which involved a literature review, a survey of 315 schools nationally, case studies of 10 selected schools, and analysis of the findings. The second chapter examines and synthesizes information from the literature review. Chapter 3 compares high morale schools with low morale schools. The fourth chapter provides an action plan for administrators that takes into account the relationship between morale and leadership, interpersonal relationships, rewards, workload, control mechanisms, professional development opportunities, and other factors. A diagnostic instrument for assessing leaders' strengths and weaknesses is provided in the fifth chapter, and the sixth presents 12 brief rules for administrators. References and an additional assessment tool are also supplied. (PGD)

Identifiers—California Achievement Tests, Staff Assessment Questionnaire

This 3-year study, part of the Effective Schools Project of the Seattle School District and the University of Washington, was undertaken to investigate the relationship between teachers' perceptions of the principal as instructional leader and average gain scores of students in 67 elementary schools in Seattle. Scores were disaggregated by student ethnicity and student free lunch status as a surrogate measure of socioeconomic status (SES). Data pertaining to teacher perceptions of the principal as instructional leader were obtained through the Staff Assessment Questionnaire, and specific attention was given to four general aspects of principal behavior: (1) mobilizing resources, (2) communicating, (3) serving as instructional resource, and (4) being a visible presence. These data were then correlated with school means for aggregated student improvement on Total Reading and Total Mathematics of the California Achievement Test (CAT). Individual gains for students were computed and aggregated for four groups: white, black, free lunch, and non-free lunch. Regression analyses were used to assess the relationships between the leadership of the principal and other effective school characteristics, while analysis of variance was used to assess the effects of leadership on student gain scores. The findings of this study suggest that teachers' perceptions of the principal as instructional leader are critical to the reading and mathematics achievement of students, particularly among historically low-achieving groups of students. The 12 publications in this annotated bibliography highlight different aspects of the assistant principal's role. One Ohio school district has created the title of "Associate Principal," a position that involves participating with the principal in planning, organizing, and evaluating the whole school program. Three articles deal with enriching and enhancing the role of the assistant principal in ways that will develop leadership capabilities as well as benefit schools. Another writer cites being a counselor and a mediator as probably the most humane and challenging aspect of the assistant principal's role. The professional development of assistant principals, according to two other articles, depends on the school principals involving them in responsibilities. One assistant principal, writing under the pseudonymn "Lee Marsh," recounts the wide range of duties and input from six principals during her career. Dealing with social problems existing in schools is a large part of an assistant principal's function. Ways to diffuse this stress are discussed in another entry. The final article admonishes the assistant principals to treat as conscious human beings the uncelebrated and unhonored students as well as the elite students. (MLF)

Descriptors—*Dropout Prevention, *Dropout Programs, Dropout Research, *Dropouts, Elementary Secondary Education, Interpersonal Competence, *Literature Reviews, Nontraditional Education, *School Effectiveness, Socioeconomic Status

Preventing dropouts is the main topic of the 12 publications reviewed in this annotated bibliography. A statistical analysis of dropouts in Portland, Oregon, revealed that the correlation by school was far greater than correlation by residential area. In another study, approximately 155 dropouts were questioned and most believed that the school system had given up on them. Responses from 44 administrators of exemplary vocational education programs gave the highest rating for dropout prevention to students' self-concept development. Beck and Muia summarized the literature on dropouts and found the key factor to be the student's socioeconomic class. Programs that work in preventing dropouts are described in three publications. O'Connor studied 3 effective dropout programs and highlights 10 characteristics of effective programs, emphasizing such points as identifying potential dropouts earlier, and encouraging, rather than coercing, students to participate in special programs. Wehlage presents a set of guidelines for the marginal student. Mahood summarizes the cost to society of dropouts and recommends in-school suspension for disruptive students. The Sarasons report on an experiment in social skills training. Finally, a report summarizing the findings of a conference of high school administrators suggests that high school students be allowed the option of spreading their education over a longer period. Identifiers—*Copyright Law Amendments 1980
The 1980 Amendments (P.L. 95-517) to the updated Copyright Law of 1976 contain two major provisions pertaining to computers. First, only one copy of the master copy of a piece of software may be legally duplicated–the backup copy made by the owner for archival purposes. Second, the only other legal copy of the master copy owned by the user is that copy reproduced by inputting the software into the computer in order to utilize the program. The amendment clearly prohibits the unauthorized duplication of copies of a computer program for distribution and use by other than the owner of the master copy. However, it does not directly address (1) using a single-loading master copy to boot up sequentially two or more microcomputers or (2) using a slightly modified master copy in a network of microcomputers. There are at least four other sources or tests for assessing the legality of these software uses: (1) the market effect test, (2) the intended use test, (3) the simultaneous/sequential users test, and (4) the fair use test. However, the otherwise harsh implications of copyright restrictions for the schools are mitigated by (1) licensing agreements that may provide financially beneficial options to schools, (2) technological advances making duplications of tangible copies increasingly difficult, (3) software producers designing programs specifically for use in networks, and (4) greater amounts of high quality/low cost software by nonprofit producers. Until these conditions become more prevalent, educators need to know and abide by the restrictions placed on the use of instructional software by the copyright law. (MLF)

Identifiers—*Milliken v Bradley, *Remedial Decrees
The 1977 Supreme Court decision in "Milliken v. Bradley," involving the Detroit public schools and the state of Michigan, held that federal courts possess the authority not only to order the implementation of educational program components as part of a desegregation remedy, but also to assess a portion of the cost of such components against the state treasury. Since 1977 similarly comprehensive desegregation plans have been ordered and/or analogous claims of responsibility and extraschool district liability advanced in litigation involving a number of other communities. These cases have presented a host of difficult factual, legal, and public policy issues not expressly resolved by the Supreme Court in "Milliken." These issues involve (1) the expanding nature of remedial regimes, (2) the theories and bases of state and local liability upon which the funding of these remedies may be predicated, and (3) the means by which such obligations may be financed and the authority of the court to mandate a particular source or method by which the needed resources are to be marshalled. This paper provides a general survey of selected issues and the manner in which they have been addressed and resolved to date by some of the trial and appellate courts presiding over "Milliken's" progeny. A hierarchy of judicial actions organized according to their intrusiveness is also synthesized from the case law. (MLF)

Construction management is utilized when a school district engages a firm to coordinate a total project. The construction management seeks to save an owner time and cost primarily through better contractor coordination and project management. These services may include the planning and design phases of the project as well as the actual construction of the facility. State laws regarding construction management are placed in categories according to whether construction management is authorized, apparently authorized, not authorized, or not addressed. An examination of the status of construction management for public school districts throughout the country reveals a mixed picture. The construction of educational facilities is clearly within the purview of the state legislatures. Generally, this state responsibility is delegated to the local school districts. While the responsibility is delegated, so too is the observance of public bid statutes. Within the past few years, many states have moved toward more flexible approaches to how school districts may construct educational facilities. Public policy-makers are beginning to realize that the public may well be protected through a construction management project delivery system. (MLF)

Identifiers—*Punitive Damages, *Smith v Wade, Supreme Court
Punitive damages have been permitted in certain cases to deter wrongdoers from similar conduct in the future. The Supreme Court decision in the case of "Smith vs. Wade" set the standard for the award of punitive damages by permitting punitive award on varying standards of negligence, gross negligence, recklessness, or other culpable conduct short of actual malicious intent. Numerous federal courts have addressed the applicability of "Smith v. Wade" in civil rights cases. Examination of a number of circuit court decisions shows affirmation of punitive damage awards on varying standards ranging from mere willfulness to gross recklessness. The substantive tort laws of the states will influence the application of the "Smith v. Wade" standard in each circuit. Should the application become significantly conflicting, some future Supreme Court might examine the subject again. (MLF)

The Education of the Handicapped Act (EHA), as amended by the Education for All Handicapped Children Act (P.L. 94-142), reflects a long history of state and federal legislation and case law. One of the purposes of the act's revision is to ensure that a free appropriate public education is made available, in the least restrictive environment, to each handicapped child between the ages of 3 and 21. Literally hundreds of federal cases were filed during the late 1970s and early 1980s seeking judicial interpretation of both the content and the intent of the EHA. Only three of these cases, however, reached the Supreme Court: "Board of Education of the Hendrick Hudson Central School District v. Rowley" (1982); "Irving Independent School District v. Tatro" (1984); and "Smith v. Robinson" (1984). Each of these cases is summarized briefly in sections of this paper. A fourth section identifies future directions in this area based on precedents established by

the Supreme Court in these three cases. Educational units will make a greater effort to guarantee that available due process procedures are both adequate and comprehensive; and many future controversies are now more likely to be settled in administrative hearings. As the EHA has been interpreted by the majority of the Supreme Court, the only handicapped children who will attempt to vindicate their rights in federal court are those who can afford legal action. "State action" is a term used to describe claims arising under the due process clause of the Fourteenth Amendment and the Civil Rights Act for which a private party is seeking damages because the state has violated that party's civil rights. Cases are summarized illustrating the doctrine's evolution over the past century. The 1875 Civil Rights Act provided the public-private basis for judicial rulings for at least the next 60 years. The state action doctrine gradually underwent a period of expansion from the formal public-private dichotomy to a functional analysis, from the late 1940's to the late 1960's. The public function (public sphere) doctrine made its first appearance in 1946. The 1960's saw a proliferation of state action cases and the degree of state involvement was utilized as the standard for determining state action. A major contraction of the state action doctrine and a revival of the public-private sphere began in 1972 with the first of three decisions authored by Justice William Rehnquist called the "Rehnquist Trilogy." Private education institutions have remained relatively immune from Fourteenth Amendment restrictions at the Supreme Court level but have been held more accountable in lower court rulings. The state action doctrine, after 100 years of transition, remains a difficult legal tool for the courts to define and administer. (MLF)

Section 1983 of the Civil Rights Act of 1871 was designed as a flexible and broadly scoped statute to restrict a wide variety of actions of state officials. During the past 15 years the number of court cases in which provisions of the 1871 act have been applied to school-related issues has increased geometrically. In 1961 the provisions of the act were made applicable to local public school board members and administrators; in 1975, the act was subsequently interpreted by the Supreme Court as a protection for students. In 1980, the Supreme Court ruled that a local governmental body whose official policy or custom violated a person's constitutional rights is not entitled to immunity from damages. This case, testing good faith immunity of muncipalities, was subsequently held applicable to local public school boards. A number of cases during the period from 1961 to 1981 are examined. During that time court decisions increased considerably the vulnerability of school boards, school board members, and school officials for the actions they may have taken that resulted in a deprivation of someone's rights. A brief review of selected cases demonstrates the trend over the past two years for aggrieved persons to seek remedy in federal court through section 1983 where state remedy is either inadequate, nonexistent, or inoperative. School officials are advised to gain a better understanding of the concepts of civil rights tort law. (MLF)

Identifiers—*Good Faith Requirements
A review of good faith requirements under meet and confer laws for public sector negotiations raises implications for school district management decisions regarding negotiations. First, it appears that state courts are being influenced by National Labor Relations Board and federal court rulings that pertain to the private sector, causing private sector negotiating strategies and reasoning to be applied to public sector negotiations. Second, the rulings that apply National Labor Relations Act provisions to public schools require boards to make every effort to reach an agreement with the employees' union. Anything that gives the appearance of surface bargaining, or merely going through the motions to satisfy the statutory requirements so that the boards can reach impasse and make unilateral changes, will be suspect and challenged and may well lead to a finding of bad-faith negotiations. Third, private and public sector rulings have expanded good faith rulings to include the need to provide information to substantiate proposals, counterproposals, and claims by management, as well as to provide information to employee representatives to permit the fulfillment of responsibilities to administer and police the contract. On balance, the efforts by the courts to provide the atmosphere for good faith negotiations via application of private sector standards to the public sector is a trend worth watching for those who negotiate in this arena. The "Legal Audit Instrument for Public School Curriculum" described in this paper is intended for those making decisions in curricular matters. The instrument has been derived from court decisions that are based on the Federal Constitution, legislation, and regulations. Corresponding cases and provisions within each state will require supplementary attention when the instrument is applied. Over 160 court decisions are identified in the areas of bilingual education; religious instruction; sex, health, and related education; special education; achievement and psychological testing; teaching methods or coverage; and library and instructional materials. Within each of these areas are yes-no questions targeted to local policy and practice. The full version of the instrument indicates the primary source or sources of federal law on which the related case law is based. Finally, the instrument indicates, given a circled response to that question, the probable vulnerability to a successful suit and the approximate assessment of compliance costs, each based on a 1-to-5 scale. On accompanying pages in each section, the instrument lists the corresponding case citations (largely post-1970) for each item. The "Religious Instruction" section is shown in the appendix. (MLF)

A review of court opinions on school discipline suggests that the use of academic penalties as a sanction for student misconduct is widespread and increasing. In 12 cases during the past decade examined in this chapter, students won 5 and lost 7. In challenges of school board policies that assess academic penalties for truancy, students won in three and lost in four cases. In challenges of policies that include grade reduction with suspensions, students won in two and lost in three cases. Despite the lack of congruency between court opinions, some observations can be made. Courts are loath to intrude in matters that are purely academic; when academic sanctions are used as a disciplinary response, they are subject to legal challenges as violative of substantive or procedural due process. Most courts require a rational connection (nexus) between the academic sanction and the conduct of the student. In addition, school rules that impose academic sanctions for student misconduct are most likely to be upheld if they incorporate the following guidelines: (1) explicit policies should be made known to the students; (2) the policy should permit students to take final examinations; (3) academic penalties should be limited to those serious offenses that also result in suspension from school; and (4) school policies should meet minimum standards of due process. Identifiers—*Financial Exigency
In problems pertaining to faculty dismissal, public higher education institutions are subject to both constitutional and contractual constraints, whereas private schools are subject almost solely to self-imposed contractual limitations. In public institutions, teachers alleging termination for protected free speech bear the burden of establishing that fact. However, when the faculty member alleges pro-

tected free speech activity prior to the institution's decision for termination, the institution must prove that the faculty member would not have been renewed in any event, according to "Mt. Healthy City Board of Education v. Doyle" (1974). In a recent noneducation case, "Connick v. Meyers" (1983), the Supreme Court significantly restricted the First Amendment protected rights of speech of public employees only to matters of public concern. Courts have consistently refused to find state action in nonpublic schools. In private institutions, the written contract, other institutional documents, and previous practices govern the rights of faculty. In cases of financial exigency, public universities are responsible for adherence to constitutional requirements as well as contractual agreements defined through state legislative actions and materials such as catalogs and faculty handbooks. Private colleges and universities are held responsible for matters of contract and relevant state legislation. Procedures are suggested for both public and private institutions to follow in the event of faculty dismissal for financial exigency or other causes. (MLF)

As of the fall of 1984, 40 states had by state mandate adopted some form of student minimum competency testing; 19 are or will be using test performance for the award of high school diplomas. In the other 10 states, local initiatives had implemented such testing programs on the school district level. Five states were using competency tests to determine grade-to-grade promotion. The primary challenges presented to date to determine the award of high school diplomas were filed as a result of the Florida Educational Accountability Act of 1976. Significant litigation concerning minimum competency testing of students has presented two primary sets of equal protection claims–those put forth on behalf of black students and those on behalf of "every student." Due process challenges to the use of competency tests and cases concerning handicapped students enrolled in special education programs have also arisen. In 36 states, some form of teacher competency testing has been mandated and all 14 of the other states are considering the addition of teacher competency test requirements. Litigation can be expected with equal protection and civil rights challenges. (MLF)

This chapter discusses the question, To what degree is the school board limited by the requirement that it not be arbitrary or capricious in deciding not to renew a probationary teacher? When teachers have been notified that their employment contracts will not be renewed, they are responsible for initiating a review of the decision. If the school has a procedure for internal review, the employee must request this review before seeking judicial review. Cases are cited that show that the courts have found a nonrenewal "arbitrary and capricious" if it is made in bad faith, is based on the teacher's exercise of First Amendment or other constitutionally protected rights, is unrelated to the educational process or to a reasonable educational objective, is justified by reasons that are wholly unsupported in fact, or is found to be an abuse of discretion. The states' statutes (sometimes board policy) establish the school board's basis for teacher renewal. To define the issue, both cases in which the board decision was found to be arbitrary and cases in which the claim was rejected are reviewed. When the school board has acted in good faith for reasons it thinks probably will improve the instructional programs–which includes not renewing an "average" teacher in order to look for a better teacher–its decision will generally stand. This paper contains an overview of selected school finance cases litigated in local, state, and federal courts. The first section contains a review of state school finance cases. Constitutional challenges to states' school finance systems were affirmed by the Connecticut Supreme Court, defeated by the Michigan Court of Appeals, and returned to a lower court by the Supreme Court of New Hampshire; in addition, seven property-poor school districts have filed suit in Texas. School districts in Michigan challenged the state's right to reduce school aid. The next section of the paper examines local fiscal issues including litigation prompted by school board decisions affecting areas such as property tax exemption, disposition of interest earned on school funds, extracurricular program fees, transportation, and school district residency requirements. A federal district ruled in Philadelphia that school districts may file a class action suit against 55 manufacturers to recover the cost of asbestos removal. The third section of the paper addresses controversial issues at the federal level: (1) the authority of the federal government to recover misspent Title I funds; (2) school lunch regulations involving soft drinks; and (3) the government's financial responsibility for the Chicago Board of Education's desegregation plan under the terms of a 1980 consent decree. The fourth section addresses the issue of public financial support for nonpublic schools. (MLF)

Dismissals for ineffective teaching, as distinguished from insubordination, immorality, or improper treatment of students, are rare because standards of teaching against which to juxtapose an individual teacher's behavior have not been available. However, abstract performance standards for teachers are beginning to emerge from research on teaching effectiveness. A table, compiled from research as well as field observation and task analyses of teaching in elementary and secondary schools, is presented as a model of stable standards of performance that will withstand judicial scrutiny. The first column heading of the table–behavior or quality–is subdivided into the following five categories: (1) instructional or pedagogical methods, (2) use of subject-matter, (3) direct outcomes of teaching, (4) interpersonal and organizational relationships, and (5) self-renewal. The second column–basis for claim of performance validation–contains letters that refer to authoritative sources of empirical data. The third column–illustrative court decisions–contains numbers that refer to cases cited in footnotes. A review of particular cases that illustrate instructional competency follows the table. The model is intended to provide teachers with comprehensive, stable, and valid performance standards. These standards also can be used to assess the work done, to provide corrective action, and to determine whether improvement has occurred. (MLF)

Identifiers—*Grove City College v Bell, Supreme Court, *Title IX Education Amendments 1972
The Supreme Court, in the case of "Grove City College v. Bell," ruled that federal regulation and enforcement activities designed to eliminate discrimination based on sex are triggered by indirect federal aid and are program specific. The Court's program-specific conclusion was immediately applied to federal statutory language that limits discrimination against the handicapped. The proposed Civil Rights Act of 1984, introduced to mitigate the effect of the Court's program-specific interpretation in "Grove City," was not passed by the 98th Congress. The effects of the case on administrative enforcement–at least 22 sex discrimination cases under investigation by the Department of Education's Office for Civil Rights–indicate that the Education Department had previously interpreted the scope of its jurisdiction with regard to the investigation of discrimination more broadly than is currently permissible. It can be predicted that the present administration will continue to oppose broad-based institutional coverage for antidiscrimination provisions, that a new civil rights measure will be drafted, and that the Office of Civil Rights will proceed cautiously pending congressional clarification of intent and would reopen closed cases if the Supreme Court's program-specific conclusions were legislatively reversed. Legal challenges to state compulsory attendance

laws have emphasized four interrelated constitutional claims. Under provisions of the free exercise clause of the First Amendment, parents have challenged the state's authority to require public school attendance in lieu of home instruction and private, religious organizations have refused to comply with state regulation of nonpublic schools. Alternatively, parents and religious organizations have asserted violations of the establishment clause of the First Amendment in attacking state regulation of private, religious school operations. In those cases in which state compulsory attendance requirements impose criminal penalties for nonconformance, challenges based upon a denial of due process have been addressed. Finally, parents have asserted a right to direct the education of the child under various constitutional theories implicating privacy, equal protection, and due process guarantees. An examination of court decisions in these areas reveals that state compulsory attendance laws are vulnerable where delegations of legislative power exceed the authority of administrative agencies, where ambiguities in statutory language permit unbridled discretion in enforcement policy, and where implementation of policies denies fundamental rights secured by state and federal constitutions. For these reasons, a conscientious review and revision of state compulsory attendance laws may be warranted in many jurisdictions. (MLF)

Due process in school is an educational process for teaching the students that they are valued, that authority exists, and they they belong in the social unit. Historically, due process emerged as a way of guaranteeing rights and the privileges of governmental protection to a wider range of people in English and American institutions. The restrictions that educators cite concerning due process are almost universally rooted in local and state policy, not in federal court decisions. Due process requires far less than good principals require of themselves. Due process is based upon trust in one another and in rational processes and is seen as the best preventative for serious misbehavior. Advantages and disadvantages found in discipline codes are listed along with the characteristics of effective, well-disciplined, high-achieving schools. (MLF)

Identifiers—Tuloso Midway Independent School District TX

The example of the Tuloso-Midway Independent School District of Corpus Christi, Texas, points out the community support benefits to be gained from an effective public relations policy. Such policies should be developed before a crisis destroys opportunities for widespread support. The system should assess its current communications needs first, then review the system's ability to provide the necessary time and resources. Drawing on this information, the board can then draft an appropriate policy. The policy document should include a statement covering the reasons for establishing a policy, designation of those responsible, provisions for regular development of public relations plans based on current conditions, and a method for regular evaluation. In addition to discussing policy needs and policy development, this article reviews significant reasons for making public communication a priority, suggests several kinds of publications that districts can produce, lists strategies for involving the community, identifies additional sources of information about public relations, and emphasizes the importance of maintaining good relations with the local media. Identifiers—Canada, University of Lethbridge (Canada)

A 1983 survey of graduates with bachelor's degrees in education from the University of Lethbridge in Canada indicated that almost 3 in 10 had left or never entered the teaching profession. This pilot study examined test and questionnaire response data for 177 former students out of 1,809 who had received a B.Ed. degree since 1972. Of these respondents, 21 submitted to telephone interviews including questions concerning attitudes toward career success. The researchers used statistical analysis to seek variables discriminating between teachers and non-teachers. Of those teaching, 78 percent planned to continue teaching. Half of the non-teachers indicated interest in returning to teaching. The findings suggested that women were more likely to leave teaching temporarily but that neither sex was more likely to leave permanently. The reasons for leaving did differ by sex: women cited staying home and men cited career or job changes as major reasons. The academic abilities of teachers and non-teachers were similar. Personality characteristics accounted for only a small percentage of the variance between the groups. Measures of attitudes toward career success showed the teachers more concerned with salaries and autonomy and less with personal satisfaction and opportunities for advancement than non-teachers. Descriptors—*Change Strategies, Community Attitudes, Community Support, Educational Environment, *Educational Improvement, Elementary Secondary Education, *Organizational Climate, *School Attitudes, School Districts

Identifiers—Duval County Public Schools FL

Well-planned, cooperative efforts to develop positive attitudes can generate improved school climate and improved student performance, as illustrated by the experience of the Duval County (Florida) Public Schools. The district's marketing efforts focus on progress reporting and performance recognition both internally and externally. Among the elements of the program have been the establishment of high standards and competency testing for promotion and graduation, the elimination of social promotion, the initiation of academic competition and academic coaches, the provision of support to potential National Merit Scholars, and the generation of high parent involvement. The improvement in students' academic achievement as measured by standardized and national tests has been dramatic. The effort depends on teachers' abilities to motivate students, and this ability hinges in part on student attitudes. These attitudes are in turn affected by teacher attitudes. The Duval County program selects specific areas for improvement each year, and seeks national recognition for those contributing to its success. (PGD)

Identifiers—Pittsburgh School District PA

In 1980 the Pittsburgh (Pennsylvania) Public Schools recognized needs for significant improvement in staff evaluation, student achievement, individual school effectiveness, and the clarification of systemwide objectives and expectations. The instructional leadership committee appointed to establish a unified approach to effective instruction reviewed the literature and created a staff development team committed to developing principals as instructional leaders. The training that the principals received increased their confidence and enhanced school effectiveness, leading to higher student achievement. The case of John A. Brashear High School is illustrative of the principal's role. The principal formed an "instructional cabinet" to assess the school's needs and develop action plans. This team decided to focus on reducing the ninth-grade failure rate by implementing a plan involving tutorial assistance, student achievement recognition, inservice training for teachers using the Madeline Hunter teaching model, and peer development assistance among teachers. The program cut the ninth-grade failure rate by over 50 percent in 2 years. Such examples indicate that the principal's role in encouraging local school program development to meet district objectives is central, and involves setting clear expectations, utilizing lead teachers effectively, establishing structures for professional interaction, and differentiating among supervisory functions. Descriptors—Change Strategies, Community Involvement, Educational Improvement, Secondary Education, Sex Differences, *Sex Fairness, Sex Role, *Student Attitudes, *Vocational Education

Before students will pursue nontraditional careers, they must be convinced that there are good reasons to break into vocational fields previously identified as the domains of the opposite sex. The failure of girls to become involved in traditionally male vocational education courses may indicate that the courses are no longer relevant and are only attended by boys for social or other reasons not related to practical concerns. Schools that consciously try not to discourage enrollment in nontraditional courses may still fail to encourage such enrollment sufficiently. Teachers may also discourage enrollment by treating male and female students differently. School boards are responsible for promoting sex equity and must go beyond the mere meeting of minimum standards. Among the strategies that can be used are communicating equity needs to school personnel and the community at large, reviewing teaching materials for nonvocational classes that may reflect sex-biased attitudes toward vocational choice, hiring women or men to teach courses traditionally taken by the other sex, appointing a citizens' advisory committee, obtaining grants, and perhaps holding an annual "nontraditional job fair." Progress toward equity should be measured by monitoring enrollments and student attitudes. (PGD)

Descriptors—Computer Literacy, Computers, Educational Change, *Educational Planning, *Educational Technology, Elementary Secondary Education, Faculty Development, School Districts, Technological Advancement
Identifiers—Houston Independent School District TX
The Houston (Texas) Independent School District established a Department of Technology to encourage the use of educational technology, especially computers, in district schools. Obstacles included claims to "turf," rapid technological change, and the lack of trained management, clear policies, and sufficient staff incentives. The department established short and long-range program goals, helped create district policy, and identified training as critical for success. The department planned to use technology to teach technology, train a cadre of teachers at each campus, use teachers as "facilitators," base training certification on proficiency, emphasize computer applications rather than programming, standardize hardware, establish a model classroom, create districtwide data processing formats, and stress problem-solving. The plan focused on training educational personnel in the uses of technology from the top administrators and school board members down to ensure administrative support. Rules identified who was to be trained and to what degree. The department also provided networking, a software library, software and curriculum review, a newsletter, a mentor system, an annual technology fair, stipends for trainees, and support for parent involvement, as well as methods for maximizing funding. Local school initiatives enhancing the district program were encouraged. (PGD)

**A Discussion of Brain Hemisphere Characteristics and Creative Leadership among Selected Educational Administrators in Tennessee.**
Pub Date—9 Mar 85
Note—88p.; Paper presented at the Annual Meeting of the American Association of School Administrators (Atlanta, GA, February 22-25, 1985).
Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150)
**EDRS Price - MF01/PC04 Plus Postage.**
Descriptors—Administrator Attitudes, Administrators, *Brain Hemisphere Functions, *Cognitive Style, Educational Change, Educational Innovation, Elementary Secondary Education, *Leadership Styles
Identifiers—Herrmann Brain Dominance Instrument, *Leadership Effectiveness, Tennessee
Findings from a study of 27 superintendents, 39 principals, and 37 supervisors recognized as effective leaders in Tennessee schools suggest that the highest level of educational leadership is dominated by individuals whose cognitive style is ineffective for conceptualizing the future. Analysis of the subjects' brain dominance patterns using the Herrmann Brain Dominance Instrument and of the subjects' management skills according to the Katz ranking system indicated that many superintendents have difficulty moving beyond the analytical and technical aspects of their positions. These administrator characteristics contrast with the leadership qualities identified in the literature as effective. Principals and supervisors showed a better balance between their analytical skills and their conceptual modes of thought, indicating less dominance by the brain's left hemisphere. Women, best represented among the supervisors, showed better balance than did men. The researchers also administered a questionnaire measuring attitudes and efforts toward innovation. Principals scored highest on this questionnaire, perhaps because they were better positioned to implement their ideas than were supervisors. This report begins with a literature review covering and integrating brain research, leadership research, and educational change studies. The findings of the present study are then discussed and administrative levels compared. The study includes an extensive list of references, and three appendixes present the instruments used. (PGD)

Identifiers—Castleton Public Schools PA
Two distinct but related topics, addressed by different authors, are covered in this report. William L. Rutherford's contribution, entitled "School Management, School Development, School Improvement in the United States," reviews the building administrator's role in school improvement within the broader context of educational administration. The report first outlines the organizational features typically found in American school systems and individual schools. Administrator's roles and responsibilities, their selection and training, and their typical activities are described next. The report then looks at trends in school improvement and considers the administrator's role in educational change and the social and professional expectations affecting the administrator's involvement. The second contribution, by Sheila C. Murphy and Shirley M. Hord, reports on the findings of a case study of an administrator's process for reawakening school pride in an urban Pennsylvania high school. Entitled "New Light from an Old Lamp: Castleton High School," the report does not cover the study methodoloy, but instead describes the school's characteristics and the administrator's management techniques. These techniques included interpreting district policies creatively, involving supportive staff members in specific projects, avoiding direct confrontations with those in formal authority roles, using persuasion rather than confrontation, and maintaining a constant vision. Identifiers—Likert Scales
This study undertook to identify parental perceptions of variables related to their child's education and to determine differences in perceptions of groups of parents categorized by grade level, race, and sex of the child. Survey questionnaires were distributed to parents of the students at Marvin Pittman Laboratory School, a K-8 school with 457 students. The instrument included items related to background variables, educational expectations rated on a Likert-type scale (from "extremely important" to "not important"), a ranking of curricular subjects in order of importance, preferences for homework time allotment and instructional grouping arrangements, and one open-ended item eliciting additional questions or comments. Results indicate that these parents place higher importance on classroom behavior, study skills, cooperation with adults, and problem-solving than on standardized tests, computer knowledge, leadership, or table manners. Highest ranking curriculum subjects were reading, arithmetic, grammar, and spelling, while lowest ranking subjects included French, industrial arts, home economics, and typing. Statistically significant differences were recorded between perceptions of parents categorized by grade level, race, and sex. Specific findings are presented in 13 tables, and the survey instrument is appended. (TE)

Identifiers—Centennial School District OR, Jefferson County School District OR, Seaside Health Education Conference (Oregon)
This bulletin examines wellness programs and what they mean to Oregon educators. The opening sections describe what is meant by "wellness" and trace the growth of wellness programs in Oregon to the annual Seaside Health Education Conference. To illustrate how wellness programs operate, the next two sections describe how two Oregon school districts–Jefferson County and Centennial–have applied and benefited from their wellness programs. Both these districts have used these programs to encourage employees to make personal commitments to lifestyle changes that will increase their productivity and generally improve their health. Common elements that characterize these programs are defined, including positive motivation, health awareness campaigns, behavior change programs, and insurance cost containment strategies. A variety of methods are used in wellness programs: psychological tests, individual health consultants, group programs, mass media promotions, and wellness-oriented social activities. Recent literature on wellness is cited, and useful examples of wellness activities are included in the appendix. (TE)

Identifiers—*California
This handbook provides information that administrators of maintenance and operations in California schools can use in systematically planning and scheduling school facility support services. The first unit, chapter 1, is designed to help members of school district governing boards establish board policies, regulations, and procedures. Topics covered include facility management, facility standards, personnel policies, selection of equipment and supplies, facility design, and site utilization. The second unit, chapter 2, outlines current practices in the field so that the director of maintenance and operations will be able to implement the policies of the governing board. Topics include the design and implementation of an organizational plan, personnel management, budget preparation, acquisitions, monitoring facilities, and evaluating the maintenance and oper-

ations program. The third unit, chapters 3 and 4, describes the functions of maintenance and operations, and suggests organizational procedures that should lead to programmed budgeting, systematic management, and efficient use of personnel. School maintenance is also discussed in the context of inflation, declining enrollments, reduced revenues, and competing budget priorities. The fourth unit, chapter 5, discusses the use of school facilities, energy management, control of hazardous materials, pest control, school security, and access for the handicapped. Appended are excerpts from selected legal references, time schedules for custodial tasks, and evaluation questions for a district's custodial program. (TE)

**A Study of Public Law 94-142 as Viewed by School Superintendents in Illinois.**
Pub Date—86
Note—11p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Administrative Problems, *Administrator Attitudes, *Administrator Characteristics, Administrator Education, Boards of Education, Compliance (Legal), Elementary Secondary Education, Exceptional Persons, *Legislation, Questionnaires, School Demography, School District Size, *Special Education, *Superintendents
Identifiers—*Education for All Handicapped Children Act, Illinois
The attitudes of selected superintendents in Illinois regarding Public Law 94-142 were studied. A review of related literature indicated that special education training and knowledge of PL 94-142 contributed to positive attitudes toward handicapped persons and the laws that apply to them. A questionnaire was sent to 300 local school superintendents in Illinois. The data thus collected yielded the following conclusions: (1) Superintendents in unit districts indicated a greater need for money to finance special education programs than superintendents in dual or high school districts; (2) older superintendents had a greater concern about school facilities for handicapped populations than younger superintendents; (3) superintendents with the specialist's degree and those from more highly populated districts had a greater concern about school and community relations in regard to handicapped populations; (4) superintendents from the southern part of Illinois were the most concerned about the finance of special education programs; (5) district's enrollment size had no significant effect upon superintendents' attitudes toward special education administration; and (6) superintendents of districts with high assessed valuation had more concern about special education curriculum. Further studies should be conducted to examine such issues as the attitude of boards of education and teachers toward handicapped students. (GJ)

Descriptors—*Cooperative Programs, *Demonstration Programs, *Disabilities, *Education Work Relationship, Program Development, Secondary Education, Transitional Programs, *Vocational Education
Identifiers—*Private Sector
ASPIRE-"Assisting Special Populations in Readiness for Employment"-is a secondary special education transition program featuring coordinated services between the public and private sectors to integrate secondary level disabled students into subsidized private sector employment. ASPIRE was introduced into the Lake Tahoe Unified School District as a model program in the 1982-83 school year and is beginning its fourth year of operation. In these three years it has systematically and successfully delivered vocational education training and work experience to disabled high school youth 16 years of age and older. It has continued to increase collaboration among the Department of Rehabilitation, the Lake Tahoe Unified School District, the Employment Development Department and the Golden Sierra Job Training Agency and additional community agencies, along with increased participation among local employers, parents, teaching staff and the media. The paper describes the project in terms of community outreach, services management, interagency involvement, education staff involvement, intake and screening, parent involvement, diagnostic assessment, classroom and nonclassroom activities, curriculum, employment services, job development, employer involvement, student placements and student support. (Author/CL)

Identifiers—*Private Sector
The directory provides information on 648 private sector programs offering services leading to competitive employment for disabled people. It is designed to help employers looking for trained and job-ready workers as well as to help individuals with disabilities in their search for available training and employment programs. Programs are listed geographically by state and city and citations provide a brief description of training areas, training levels, placement areas, post-placement support, and disability levels served. Programs are cross referenced by training areas. Appended material includes listings of State Vocational Rehabilitation Agencies, State Governor's Committees on Employment of the Handicapped, and Executive Directors of Developmental Disability State Planning Councils. A final section consists of program and training area cross-reference charts for each state and territory. (CL)

Identifiers—*Osteogenesis Imperfecta
Three pamphlets provide basic information on the care and education of children with osteogenesis imperfecta (OI) a lifelong liability to fractures due to imperfectly formed "brittle bones." The first brochure, a guide to eduction for children with OI, addresses the importance of attitudes, the value of early education, public school enrollment, due process, individualized education programs, classroom adjustment, and college attendance. The second brochure describes the development and functions of the Osteogenesis Imperfecta Foundation, Inc., a voluntary national health organization. The final pamphlet provides suggestions for the care of babies and children with OI and answers questions about such aspects as home management, clothing, food, first aid, and day to day care for children wearing a body cast. Information on helpful equipment and toys concludes the pamphlet. (CL)

Descriptors—Case Studies, Communication Disorders, *Expressive Language, *Language Acquisition, Moderate Mental Retardation, *Severe Mental Retardation, *Speech Therapy, Stimulation, Young Children
Identifiers—*Cornelia de Lange Syndrome
The paper describes a successful attempt to stimulate expressive language in Becky, a young child with Cornelia de Lange syndrome, a condition characterized by moderate to severe mental retardation, dwarfed stature, and excessive body hair. The child participated in infant stimulation and individual speech therapy and her expressive output has grown to spontaneous two and three word sentences and imitation of five word sentences. Therapy procedures have featured stimulation which included oral-motor play and use of noise making objects along with maximum sensory input, modeling of sounds and words (especially very highly inflected verbal models), expansion and parallel talking, and intense parent involvement. Reasons are suggested both for the lack of speech improvement in other children with the syndrome as reported in the literature and for Becky's success in developing language. (CL)

Descriptors—*Class Organization, *Classroom Techniques, Delivery Systems, *Learning Disabilities, Models, *Program Development, *Secondary Education, Student Evaluation, *Teaching Methods
The booklet examines issues and strategies in serving learning disabled (LD) secondary students. Chapter 1, on program development, reviews such program options as varieties of the resource room model and self-contained class and examines three major factors involved in decisions about program emphases: (1) administrative practices, (2) teacher orientation, and (3) student characteristics. The second chapter considers three aspects of instructional planning: assessment of individual instructional needs, student motivation, and classroom organization and student behavior management. Research is reviewed in chapter 3 on elements that affect student learning and implications are drawn for LD teachers in terms of interaction with students, structure of lessons, and learning time. Chapter 4 briefly discribes indirect services, such as consultation and communication with other teachers. Chapter 5 concludes the booklet by offering 10 recommendations for LD teachers including conducting systematic assessments, stressing motivation, and planning instruction carefully. A reference list is provided. (CL)

**A Comparison of the Oral Narrative Abilities**

**between Normal and Learning-Disabled Middle School Children.**
Pub Date—Nov 85
Note—19p.; Paper presented at the Annual Convention of the American Speech-Language-Hearing Association (12th, Washington, DC, November 22-27, 1985).
Pub Type— Speeches/Meeting Papers (150) — Reports - Research (143)
**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—*Expressive Language, Intermediate Grades, *Learning Disabilities, Middle Schools, *Narration, *Story Telling
The study assessed the oral narrative abilities of 10 normal and 10 learning-disabled (LD) middle school children (11-12 years old). Narratives were assessed using A. Applebee's system for the development of story organization. The narratives were also examined for the specific components used within the stories themselves. Findings revealed different developmental levels of narrative structure and a differentiation in the specific components within the story episodes between the groups of Ss. Findings suggested that LD Ss had difficulty formulating a well thought-out and coherent narrative, and that remediation should focus on the concepts of underlying narrative components. (CL)

**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Developmental Disabilities, *Family Programs, *Financial Policy, Program Costs, *Respite Care, *Services, State of the Art Reviews
Identifiers—*Minnesota
The paper examines issues of respite care specifically as they relate to developmentally disabled persons in Minnesota. A review of the literature focuses upon the status of respite care services in the state as well as the need for respite care and its role in an array of family support services. Family services are described in terms of those in the home (such as homemaker services) and those outside (such as specialized nursing services and state residential facilities). Respite care programs in two other states, Massachusetts and Wisconsin, are also described. A final topic covered is financing respite care services. The paper concludes that respite care is a supportive as well as preventive service for families, and that its lack in Minnesota has resulted in an overreliance on the use of state hospital facilities by families seeking temporary relief. A reference list and a list of respite care training resources are appended. (CL)

Descriptors—*Emotional Adjustment, *Emotional Disturbances, *Fathers, *Mental Retardation, Parent Attitudes, *Stress Variables
This study reexamined investigations by M. Erickson, W. Miller and W. Keirn, who tested a "stress reaction hypothesis" by comparing MMPI (Minnesota Multiphasic Personality Inventory) profiles of 25 fathers of mentally retarded (MR), emotionally and behaviorally disturbed (ED), and non-clinic (N) children (6-16 years old). The finding of the earlier studies that fathers of young MR and ED children do not differ was not fully confirmed when fathers of children aged 6-16 years were sampled. Results indicated that an overall difference did exist among the three groups but did not reach clinical significance. Most differences found were between fathers of ED and MR children. The earlier conclusion that fathers of young ED and MR children are likely more stressed than those of N children was not confirmed with samples of fathers of older children. (Author/CL)

Descriptors—*Alcoholism, *Clinical Diagnosis, *Disabilities, High Risk Persons, Intervention, Physiology, Pregnancy, *Prenatal Influences, *Prevention, Special Health Problems, Student Characteristics
Identifiers—*Fetal Alcohol Syndrome
The paper reviews Fetal Alcohol Syndrome (FAS), a series of effects seen in children whose mothers drink alcohol to excess during pregnancy. The identification of FAS and its recognition as a major health problem in need of prevention are traced. Characteristics of children with FAS are described and resultant growth retardation, abnormal physical development, central nervous system dysfunction, and fetal and perinatal death are discussed. The research on effects of different levels of alcohol consumption during pregnancy is cited and the physiological and metabolic effects on the fetus are explained. Emotional and psychological defects in children of alcoholic fathers are also considered. A case study illustrates the importance of early intervention. The need for federal and state policy initiatives in prevention and early diagnosis is stressed. A list of service and information resources on FAS concludes the paper. (CL)

**Autonomous Learner Model for the Gifted and Talented.**
Pub Date—85
Note—94p.; Presentation at the Annual Convention of the National Association for Gifted Children (32nd, Denver, CO, November 1, 1985) was based on the document.
Available from—Autonomous Learning Publications and Specialists, P.O. Box 2264, Greeley, CO 80632 ($9.95).
Pub Type— Guides - Non-Classroom (055)
**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—Divergent Thinking, Elementary Secondary Education, Enrichment, *Gifted, Independent Study, *Individual Development, *Models, Problem Solving, Seminars
Identifiers—Autonomous Learner Model for Gifted and Talented
The manual describes the Autonomous Learner Model for the Gifted and Talented (K-12), an approach to helping students become problem solvers through divergent and convergent thinking. Among basic principles of the model are emphases on self esteem, social skills, student interests, and broad-based content topics. Each of five dimensions of the model is analyzed: (1) orientation (understanding giftedness, group building activities, self-understanding, program opportunities and responsibilities); (2) individual development (learning skills, personal understanding, interpersonal skills, career involvement); (3) enrichment activities (explorations, investigations, cultural activities, service, adventure trips); (4) seminars; and (5) in-depth study. Sample worksheets and grading requirements are among items appended. (CL)

**Professor-Physically Disabled College Student Interaction: Scoring Manual.**
Pub Date—85
Note—26p.
Pub Type— Tests/Questionnaires (160)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—*College Students, *Evaluation Methods, Foreign Countries, *Interaction, *Interpersonal Relationship, *Physical Disabilities, *Teacher Student Relationship
Identifiers—Canada
The manual presents an empirically based scoring system to evaluate interactions between college students with physical disabilities and their professors. It specifies 28 situations involving physically disabled students and professors along with 196 reasonably common behaviors in each of these situations (with frequency and social appropriateness values). Situations are grouped into seven categories: general issues, class activities, time issues, personal issues, third person, special consideration, and grading issues. Frequency scores are based on the mean of the professors' and students' ratings, with social appropriateness ratings made by students and professors provided separately for each behavior on 10 point scales. Behaviors are grouped into those initiated by students and those initiated by professors and presented in rank order of frequency. A description of the development of the scale methodology concludes the document. (CL)

**The Effects of Parent Participation and Training in Educational Programming on the Developmental Achievement of Handicapped Children: A Review of the Literature.**
Pub Date—[85]
Note—11p.
Pub Type— Information Analyses (070)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Child Development, *Disabilities, Elementary Secondary Education, *Parent Education, *Parent Participation, *Parent Role, Parent School Relationship, Program Effectiveness
Research on the effects of parent participation and training on disabled children's development is reviewed. Studies cite the widespread belief in importance of parent involvement; note the need to distinguish between parental involvement with the child and involvement with the educational program; consider comfortable levels of participation; review professionals' attitudes toward parent involvement, including their expectations about parents' role in educational decision making; summarize strategies to maximize parent participation; review phases of parental involvement; and discuss parents' role in maintaining or increasing students' skills over the summer break. The lack of research on the effects of parent participation and training on educational programing and academic and social achievment despite general agreement on their importance is noted. (CL)

**Parenting the Rural Gifted.**
Pub Date—Mar 86
Note—8p.
Pub Type— Guides - Non-Classroom (055)

**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Child Rearing, Community Resources, Elementary Secondary Education, *Gifted, *Parent Role, Program Development, *Rural Youth

The paper describes the major needs of gifted rural students and suggests ways parents can use nonschool as well as school resources to help meet those needs. Students need guidance to deal with their differentness, to evaluate their strengths and weaknesses, and to make plans for the future. Parents are advised to gather information and create a profile of their child outlining areas of need as well as strengths. Students need broader opportunities for academics, non-academics (such as fine arts and visual arts), and personal contacts for age-group friendships and career role models. Suggestions are offered for making optimum use of resources from within the community and beyond. (CL)

**The Role of Extracurricular Activities in High School Education: A Chart Essay on Survey Findings.**
Texas A and M Univ., College Station. Coll. of Education.
Pub Date—5 Nov 85
Note—35p.; Paper presented at the Annual Convention of the National Association for Gifted Children (32nd, Denver, CO, November 2-8, 1985). Prepared at the Gifted and Talented Institute.
Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Athletics, Clubs, *Extracurricular Activities, *Gifted, *High Schools, Leadership, School Activities, Student Interests, *Student Participation

The study examined the impact of high school extracurricular activities on learning in 515 award-winning high school students and student leaders. Fifteen research questions are listed (with data reported in separate charts for each question) on such topics as degree of involvement, participation in athletics, effects of numbers of awards and leadership roles, and benefits of extracurricular activities as perceived by students. Implications for practice of administrators, curriculum planners, and teachers are considered, among them that participation in extracurricular activities provides opportunities for belonging as well as for developing maturity and independence. Future research directions are noted. (CL)

**Practices of Curriculum Development for the Gifted Students.**
Pub Date—Dec 85
Note—10p.
Pub Type— Guides - Non-Classroom (055)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Cognitive Development, *Curriculum Development, Elementary Secondary Education, *Gifted, Teaching Methods

The paper reviews definitions of differentiated curricula for gifted students and considers approaches for differentiation. Curriculum content can be modified by making it more abstract, more complex, more varied, and organized differently from the regular curriculum. Process modification can be accomplished through higher level thinking, divergent thinking, discovery learning, problem solving, and logic. Each approach is briefly explained, as is using a variety of methods and formats. Student products can be modified as well via independent study, projects, learning centers, and packets. Finally, the learning environment can be modified to promote independence, encourage higher levels of thinking, and facilitate creativity. (CL)

**Comparison of Question-Response Feedback Interactions of Gifted Students, during the Texas Future Problem Solving Program, as an Effective Delivery System.**
Pub Date—Jan 86
Note—10p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Feedback, *Gifted, Intermediate Grades, *Problem Solving, *Questioning Techniques, Teacher Role
Identifiers—*Texas Future Problem Solving Programs

Designed to explore differences in interactions between groups of teams entered in the Texas Future Problem Solving Program (TFPS), the study examined the question-response-feedback pattern of interaction used by four TFPS gifted sixth grade teams. TFPS teams are encouraged to formulate 20 responses to a situation in a given amount of time. Group A was led in discussion by a teacher/facilitator asking literal, inferential, and comprehension questions following brainstorming of TFPS situations. Group B Ss participated in the brainstorming but not the teacher/facilitator led questioning. Group A Ss produced more responses than Group B Ss using the peer to peer method. (CL)

**Gifted and Talented Program. Final Evaluation Report, 1984-1985. E.C.I.A. Chapter 2.**
District of Columbia Public Schools, Washington, DC. Div. of Quality Assurance.
Pub Date—Sep 85
Note—64p.
Pub Type— Reports - Evaluative (142) — Tests/Questionnaires (160)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—Elementary Secondary Education, *Gifted, Program Descriptions, *Program Effectiveness, *Program Evaluation
Identifiers—*District of Columbia

The report presents evaluation findings of the Gifted and Talented (G and T) Education program in the District of Columbia Public Schools. An introductory section provides background information and a project description. The evaluation follows the Planning, Monitoring, and Implementing Evaluation Model for Decision Making. An interim report, which described agreements or discrepancies between intended and observed inputs and processes, is updated in this report and agreements or discrepancies between intended and observed outcomes for each objective are specified. Objectives include providing an enriched curriculum for identified students, demonstrating student above-average academic and creativity performance, and showing positive student, teacher, and parent attitudes toward the project. Appended material makes up more than half the report and includes a list of participating schools, agendas for the divisional Olympics of the Mind competition, and student, parent, and teacher questionnaires and response concerning the G and T program. Descriptors—Administrator Attitudes, Behavior Rating Scales, Creative Development, Elementary Secondary Education, *Gifted, Models, Productivity, Student Characteristics, Talent, *Talent Identification, Teacher Characteristics, *Teacher Role, Test Validity
Identifiers—*Enrichment Triad Model, *Revolving Door Identification Model

Six studies are presented which investigate factors in implementing the Revolving Door Identification Model (RDIM) and the Enrichment Triad Model in gifted education for children in grades 1-8. In "An Analysis of the Productivity of Gifted Students Participating in Programs Using the Revolving Door Identification Model," S. Reis reports, among other results, a signficantly higher proportion of girls than boys in grades 1-6 who "revolved in" to complete advanced level investigations in a resource room for the gifted. J. Delisle concludes, in "The Revolving Door Identification and Programming Model: Correlates of Creative Production," that RDIM was effective statistically and in the practical realities of school operation. E. Gubbins reports quantitative and qualitative results on creativity and productive behavior in "Revolving Door Identification Model: Characteristics of Talent Pool Students." R. Kirshenbaum describes a study on a teacher rating scale of creativity, the Creative Process Inventory, in "The Incremental Validity of a Teacher Rating Scale in Identifying Creatively Productive Students." In "Administrators' Attitudes Toward Gifted Programs Based on the Enrichment Triad/-Revolving Door Identification Model: Case Studies in Decision-Making," C. Cooper concludes that attitudes were shaped by the need for specific data and an appreciation for the program's integrity as measured by valued decision-making criteria. The final paper, "Facilitator of Learning: A Micro-Ethnographic Study of the Teacher of the Gifted" by C. Story suggests that successful teachers of the gifted must facilitate independent studies, possess the characteristics of good teachers in general, demonstrate highly developed management skills and exhibit competencies in inservice presentations. **A Comparison of the Receptive Discrimination Skills of Hearing Impaired and Normal Hearing College Students for English and Foreign Languages.**
Pub Date—Nov 85
Note—21p.; Paper presented at the Annual Convention of the American Speech-Language-Hearing Association (12th, Washington, DC, November 22-25, 1985).
Pub Type— Speeches/Meeting Papers (150) — Reports - Research (143)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—College Students, Discrimination Learning, *Hearing Impairments, Higher Education, *Language Skills, *Receptive Language, Second Language Instruction, *Second Language Learning

Ten hearing impaired college students and 10 normal hearing students were given receptive speech discrimination tests in English, French, and Spanish. No significant differences between English and foreign language discrimination scores were found for the normal hearing Ss. The hearing impaired Ss had significantly lower discrimination scores for foreign language than English. Findings suggested that foreign language instruction should be modified to de-emphasize hearing and speaking components. It was also concluded that the difference in performance in foreign languages by hearing impaired students is not purely auditory, but stems from lack of higher level cognitive and semantic aspects. **Advance Organizer Strategy for Educable Mentally Retarded and Regular Children.**
Pub Date—86
Note—22p.; An earlier version of this manuscript was presented at the International Special Education Congress (Nottingham, England, July 16-19, 1985).
Pub Type— Speeches/Meeting Papers (150) — Reports - Research (143)
**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—*Advance Organizers, *Films, *Mild Mental Retardation, *Retention (Psychology), Secondary Education, Teaching Methods

The study examined the effects of an advance organizer on the learning and retention of facts and concepts obtained from a sound film by educable mentally retarded (N=30) and regular children (N=30) in a mainstreamed secondary public school class. Also examined was the interaction between the advance organizer and ability levels of the Ss. Results indicated facilitative effect of the advance organizer for both groups; however, ability levels did not differentially affect the learning outcomes. The implications for teachers in the mainstreamed class include the desirability of teachers previewing advance organizers of films rather than previewing the film in its entirety. References and data tables are appended. (Author/CL)

**Cognitive Skills of Children with Meningomyelocele.**
Pub Date—Aug 85
Note—21p.; Paper presented at the Annual American Psychological Association (93rd, Los Angeles, CA, August 23-27, 1985).
Pub Type— Speeches/Meeting Papers (150) — Reports - Research (143)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Behavior Patterns, *Cognitive Development, Evaluation Methods, Memory, Multiple

Disabilities, *Neurological Impairments, Perceptual Development, *Scores, Student Evaluation
Identifiers—*Meningomyelocele
WISC (Wechsler Intelligence Scale for Children) and WRAT (Wide Range Achievement Test) data from the first sample of 60 children with uncomplicated meningomyelocele (a neurological condition) were examined to determine their deviation from test norms. A second sample of 46 children was tested with the WISC-R, WRAT, VMI (Visual Motor Integration) memory scales of the DTLA (Detroit Test of Learning Aptitude) and the Achenbach Child Behavior Checklist. Results supported previous reports of differences in overall level of cognitive abilities of children with meningomyelocele when compared to "normal" children. Individuals with meningomyelocele tended to score below established norms on the WISC, WISC-R, WRAT, VMI, and auditory memory scales of the DTLA. Findings were not related to presence or absence of shunt. In the absence of shunting, functional motor level was inversely related to WISC IQ. All Achenbach Scales except School Competence were within normal limits. Standard deviations tended to be greater in these populations than in established norms. These studies emphasize the need for comprehensive evaluation of individuals' pattern of strengths and weaknesses in planning children's remediation programs as well as in facilitating compensation for fixed deficits in older individuals. (Author/CL)

Descriptors—Art Activities, *Disabilities, *Games, Handicrafts, *Mild Disabilities, Motor Development, Music Activities, *Play, *Toys
Intended for friends and families of children with disabilities, the book contains information and suggestions on play activities, toys, and games for children (0-8) with mild and moderate disabilities. Activities are sequenced from simpler to more developmentally advanced within six major categories (1) exploring the senses (hid and find, flashlight games); (2) exploring movement (roly-poly games, ball, family bunny hop, home-made scooter boards); (3) exploring outdoors, waterplay and make-believe (sandplay, outdoor art, box creations); (4) exploring arts and crafts (homemade fingerpaint, baker's clay, screen painting, tie dye); (5) exploring music and rhythm (finger play games, action songs and chants, rhythm and musical instruments); and (6) exploring group activities (bean bag toss, circle games, dramatic play). Each activity provides information on goals, materials, directions, and adaptations. (CL)

The report describes accomplishments of a project for training personnel involved in occupational education for handicapped students in 2-year colleges. The inservice training was intended for vocational educators, career/academic/personal counselors, job placement officers, and coordinators for special services for disabled students. Training focused on three major areas (vocational instruction, administration, and interprofessional cooperation) and was implemented via career/vocational teams. Teams from 17 2-year colleges attended 9 workshops at 3 all-day conferences which included joint meetings of college staff and training personnel and line supervisors from industry. A general theme of modifying the attitudinal climate of the college was addressed in all three conferences which separately focused on occupational training of students with learning disabilities, visual and hearing impairments, and orthopedic impairments and hidden disabilities. Each of the three conferences is described and presentations summarized. Appended material includes listings of conference participants, agendas, and materials distributed at the conferences. (CL)

Descriptors—*Disabilities, *Family Programs, Models, *Parent School Relationship, Preschool Education, Program Development, Respite Care, Systems Approach
Identifiers—*Family Exchange Centers
Intended for people interested in replicating the ideas contained in this manual in their own communities, the handbook describes the Family Exchange Center (FEC), an approach designed to support families with developmentally disabled children. Services offered include social, recreational, educational, mutual aid, support, and respite activities. A rationale for the FEC concept is given in which the family is considered as a system and in which reactions of the system to identification of disability in the child are discussed. Changes in parent/professional patterns and the issue of trust and confidentiality in the FEC model are examined. An organizational chart illustrates the component parts of the FEC, including the coordinating committee, monthly organizational meetings, and a variety of family activities, including informal parent networking, play and discussion opportunities for siblings, and advocacy groups. A final section on administrative considerations addresses staffing and outreach to professionals and consumers. (CL)

The paper describes training of staff in a mainstream program for children 4 months through 5 years of age. Approximately 40% of the 105 children have one or more handicapping condition. The program provides training via a competency model. Preservice training is delivered to a new employee when entering the program by teams made up of the program director, family services coordinator, office manager, outreach specialist, nurse, and a classroom teacher representative and addresses such topics as time management, personnel issues, data collection and recordkeeping. Inservice training based on assessment of needs and strengths, features outside presenters as well as in-house staff. Ongoing training features off-site conferences and seminars on topics chosen by individual staff members. (CL)

Descriptors—*Disabilities, Early Childhood Education, Educational Philosophy, Infants, *Mainstreaming, *Teacher Role
The experience of a mainstreamed program for children aged 4 months through 5 years is reviewed and factors involved in serving children with specific handicapping conditions are examined. The importance of viewing children from a developmental perspective is stressed. Among issues discussed are determining program needs for children with disabilities, providing services for children's basic health needs, preparing staff and parents to deal with children with disabilities, explaining to children about handicapping conditions, and accommodating specific handicapping conditions in the classroom. A 10-step action plan consisting of such tasks as getting information about the handicapping condition and sharing information with staff and families concludes the paper. (CL)

Descriptors—*Classroom Design, *Curriculum Development, Day Care, *Disabilities, Early Childhood Education, *Environmental Influences, *Mainstreaming, *Teacher Role
The paper examines ways in which classroom design and early childhood curriculum interact to ease the integration of handicapped children into a day care program. General principles of environmental design are addressed, and an example of the Northwest Center's Child Development program is cited to illustrate components of the environment. Ten steps in design are listed, including drawing the classroom floor plan and examining accessibility. Materials are considered in terms of availability and arrangement (such as displaying materials of increasing difficulty on higher shelves). Curricular background information is presented. Action plans are then offered for linking the curriculum to the environment, including design of a personal plan for each child, and for determining the role of the teacher as a facilitator in the classroom environment, including sequence of lesson plans from one week to the next. Appended material includes criteria for designing an environment, classroom inventories and floor plans by age group, lists of materials and equipment for classroom learning centers by age group, a description of curriculum themes and an overall 12-month curriculum, a daily schedule, and a chart of learning objectives. Descriptors—*Career Development, Demonstration Programs, *Disabilities, Education Work Relationship, Interpersonal Competence, Program Descriptions, Rural Areas, *School Business Relationship, Secondary Education, Severe Disabilities, Special Education, *Staff Development, Teacher Education, Vocational Adjustment, Vocational Education, *Vocational Evaluation
This report includes 87 1-page abstracts of presentations delivered at a conference on transition to work and life for disabled students. Names of presenters are included along with titles and abstracts are grouped into five major areas (sample presentation topics in parentheses): (1) career/vocational assessment (school-based vocational assessment, screening and vocational assessment of learning disabled students, curriculum-based vocational assessment planning); (2) transition projects (job-site work experience at the junior high school, work-study/on-the-job training, transition programing within an urban community, employment in high technology, implications for counseling the Black male); (3) elementary career development, rural, severely handicapping conditions and personal/social adjustment (volunteering, community-based job training for autistic youth, industrial arts education, social/leisure skills instruction for mentally retarded adults, rural community-based program for severely handicapped students, life-centered career education activities); (4) postsecondary, business/industry linkages (transition through rehabilitation technology, issues concerning the targeted job tax credit, business/industry internships); and (5) personnel preparation (an interuniversity, competency-based vocational special needs master's program, needed policy changes in transitional services, vocational teachers' attitudes towards special needs, statewide model for leadership training of transition educators and human service personnel). (CL)

National Committee for Prevention of Child Abuse, Chicago, Ill.
Report No.—ISBN-0-937906-45-X
Pub Date—85
Note—61p.
Available from—National Committee for Prevention of Child Abuse, 332 South Michigan Ave., Suite 950, Chicago, IL 60604-4357 ($4.00; discount for 6 or more copies).
Pub Type— Guides - Non-Classroom (055)
**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—*Child Development, *Child Neglect, Elementary Secondary Education, *Employed Parents, *Latchkey Children, Psychological Characteristics
The booklet is based on information from a 1984 conference on school-age latchkey children (those who take care of themselves during the out-of-school hours). An introduction notes controversies in terminology and focuses the discussion on what self-care means to the experiences of childhood. The first two chapters discuss the impact that having parents in the workforce has on children, summarize the number of children in self-care, and discuss risks and benefits. The next two chapters look at help available to parents considering self-care. Formal, adult-supervised programs are described along with other types of help. The final chapter discusses what citizens and community leaders can do at local, state, and national levels. (CL)

**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—*Child Abuse, Child Rearing, Discipline, *Listening Skills, *Parent Child Relationship, Prevention, *Punishment
The pamphlet is intended to show that communication works better than punishment in correcting children. Examples are cited of non-punishment reactions and messages in which parents tell their children how they feel about their actions, what parents don't like about it, and why. The importance of active listening is stressed and examples of its use in helping children feel understood are offered. Ways in which active listening works with verbal as well as preverbal children are noted. (CL)

**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—*Child Abuse, *Child Neglect, Elementary Secondary Education, *Family Problems, Prevention, *School Policy, *School Role, *Sexual Abuse, Teacher Role
The booklet provides an overview on the school-related issues involved in child abuse and neglect. Definitions, causes, and effects of abuse and neglect are reviewed in the first chapter; guidelines for identifying physical and sexual abuse, neglect, and emotional maltreatment are offered in chapter 2. Aspects of reporting abuse are noted as are issues involved in investigation and intervention. A discussion of prevention centers offering parenting and safety curricula and helping adolescent parents is also included. Issues for schools to address include staff criteria, school environment, and policies on corporal punishment. The final chapter presents ways in which educators can help set policy, establish procedures, and take individual action. (CL)

*Karon, James P.*
**Report on the Rhode Island Project to Evaluate Special Education Resource Programs.**
Rhode Island State Dept. of Education, Providence.
Pub Date—Feb 84
Note—25p.
Pub Type— Reports - Evaluative (142)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Disabilities, Elementary Secondary Education, Parent Attitudes, Program Costs, *Program Effectiveness, *Resource Room Programs, *Self Evaluation (Groups)
Identifiers—*Rhode Island
To evaluate the effectiveness of special education resources in Rhode Island school districts, a self-study guide was completed by two districts and an effectiveness study performed in six other districts. The six district study gathered survey data from parents, resource teachers, and regular educators and analyzed program and performance data from student records. Results included that two-thirds of the parents reported good or very good progress in their child, that five out of six regular educators believed in the effectiveness of the special education resource program, and that resource teachers claimed that approximately one-third of the resource students were achieving a high rate of progress. Analysis further revealed that

teacher caseload was significantly related to parent opinion on the effectiveness of the program and that class size was correlated with students' test performance. Findings were also reported regarding program cost and program effectiveness (including that students in high cost programs made stronger educational gains per year than students in low cost programs), communication and recent training. (CL)

**Filling in the Cracks: A Study of the Problems and Needs of Severely Emotionally Handicapped Children and Adolescents and of Mentally Retarded/ Emotionally Handicapped Adults in South Carolina.**
South Carolina Developmental Disabilities Council, Columbia.; South Carolina Protection and Advocacy System for the Handicapped Inc., Columbia.
Pub Date—Mar 82
Note—168p.
Pub Type— Reports - Descriptive (141)
**EDRS Price - MF01/PC07 Plus Postage.**
Descriptors—*Adults, *Behavior Disorders, Delivery Systems, Demography, *Demonstration Programs, Educational Needs, Educational Policy, Elementary Secondary Education, *Emotional Disturbances, Incidence, Needs Assessment, Psychological Needs, Services
Identifiers—*South Carolina
The report examines needs and policy implications for serving emotionally disturbed and behavior disordered individuals in South Carolina. The first section focuses on children and adolescents and considers demographic and incidence figures as well as offering a composite profile. Students' problems and needs are identified, including a lack of service coordination and resources and a lack of alternatives and service continuity. Recommendations address coordination of services and a continuum of services. The second section follows the same format for adults. Case profiles are followed by a consideration of problems and needs of institutionalized and community residents. Recommendations for adults include designating a lead agency for working toward establishing a coordinated continuum of services. Appended material includes data analysis and descriptions of model programs. (CL)

**A Program to Inform and Change Negative Attitudes about Special Education.**
Pub Date—Aug 85
Note—113p.; Ed.D. Practicum, Nova University.
Pub Type— Reports - Descriptive (141) — Dissertations/Theses - Practicum Papers (043)
**EDRS Price - MF01/PC05 Plus Postage.**
Descriptors—*Disabilities, Elementary Education, Inservice Teacher Education, Knowledge Level, *Mainstreaming, Simulation, *Special Education, *Student Attitudes, *Teacher Attitudes, Teacher Workshops
This report describes attempts to inform regular elementary teachers about the needs of handicapped students and to change negative attitudes about special education. Informal staff workshops addressed legislation, common characteristics of handicapped students, and successful techniques for incorporating students with various disabilities into the classroom. Student assemblies were designed to enhance understanding of disabilities through simulation activities. A peer assistant program was also instituted. Eighty-seven percent of the staff participated in the program, and most found the workshops interesting and informative. The peer assistnat program was favorably accepted by staff and students. Appendices include the survey instrument, results of the survey, and sample newsletters. (CL)

Pub Date—86
Note—41p.; Photographs may not reproduce clearly.
Available from—Brookline Books, P.O. Box 1046, Cambridge, MA 02238 ($6.95).
Pub Type— Guides - Non-Classroom (055)
**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—Comparative Education, *Disabilities, Elementary Secondary Education, Federal Legislation, Foreign Countries, *Mainstreaming, Parent Participation, Parent School Relationship, Program Implementation, *Special Education, State Legislation
Identifiers—*Great Britain, *Massachusetts
The report discusses Massachusetts' experiences in implementing P.L. 94-142, the Education for All Handicapped Children Act, draws conclusions regarding integration of federal and state law, and describes placement options available under the law. The context of reform in both the United States and Great Britain is discussed, and the state-wide efforts in implementing the law are recounted. A teacher's and an administrator's view of the law are presented. The case of a British child who spent a year in Western Massachusetts' fully integrated classes is described and her Individualized Education Program cited. Additional examples of the mainstreaming approach are offered, including a deaf and hearing impaired collaborative. Information on parental involvements addresses issues of politics and the balance of power with professionals. Questions of cost are considered as are implications of serving students age 22 and older. A concluding section points out lessons to be learned by Britain from the Massachusetts system. (CL)

**Ways to Communicate with Children Who Are Profoundly Mentally Retarded and Cannot Speak.**
Pub Date—Mar 85
Note—16p.; Paper presented at the World Congress of the International Association for the Scientific Study of Mental Deficiency (7th, New Delhi, India, March 24-28, 1985).
Pub Type— Opinion Papers (120) — Speeches/ Meeting Papers (150)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Communication Skills, *Manual Communication, Multiple Disabilities, Nonverbal Communication, *Severe Mental Retardation, Teaching Methods
Experiences working with nonverbal severely and profoundly retarded and multiply handicapped children are discussed in this paper. Alternative communication systems are reviewed, including use of manual signs, pictures and symbols, photographs, realistic drawings, pictograms, and Bliss Symbols. A model for teaching basic understanding of communication identifies several stages leading to symbolic languages: the resonance phenomenom (gestures based on the child's movements), co-active movement (movements through space leading to imitation), and non-representational reference (teaching the child increasingly more abstract ways of representation). Progressions are noted from the non-representational reference stage to use of a sequence or calendar box to chart the activities of the day. (CL)

**Three Subgroups of Preschool Children with Speech Intelligibility Disorders.**
Pub Date—Nov 85
Note—24p.; Paper presented at the Annual Convention of the American Speech-Language-Hearing Association (12th, Washington, DC, November 22-25, 1985).
Pub Type— Speeches/Meeting Papers (150) — Reports - Research (143)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Articulation Impairments, *Cognitive Development, Delayed Speech, Language Acquisition, *Motor Development, *Perceptual Development, Preschool Education, *Speech Skills
The study was designed to measure language, cognitive, perceptual, and oral-motor abilities in 17 preschoolers referred for speech-language evaluation because of unintelligible speech. Ss were administered a test battery which included tests of hearing, coarticulation, vocabulary, speech sound discrimination, and oral examination of the speech mechanism. Cluster analysis of the test scores defined these groups of children with similar test scores: group 1–severe articulation disorder, poor oral motor coordination (especially of the tongue), average language and above average cognition; group 2–severe articulation disorder, observable muscle weakness, average language and above average cognition; and group 3–the most severe articulation disorder, muscle weakness, language and cognitive deficits. All Ss had oral-motor differences. Findings suggested that it was important to distinguish the child with a motor-speech disorder from the child who has learned incorrect articulation, and the child with a phonological delay or disorder. (CL)

**Directory of California Community Colleges Exemplary Programs and Materials for Handicapped Population Students.**
Educational Evaluation and Research, Inc., Menlo Park, Calif.
Spons Agency—California Community Colleges, Sacramento. Office of the Chancellor.
Pub Date—85
Note—43p.; For an earlier edition, see ED 242 939.
Pub Type— Reference Materials - Directories/Catalogs (132)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Audiovisual Aids, *Community Colleges, Curriculum Development, *Demonstration Programs, *Disabilities, Resource Materials
Identifiers—*California Community Colleges
The directory presents information on model programs, curriculum materials, and guides regarding Handicapped Student Programs and Services (HSPS) funds in California community colleges. Materials were identified via criteria which considered them exemplary and then selected by an advisory committee. Citations are organized in five major topics (sample subtopics in parentheses): (1) model programs (horticulture program for handicapped students); (2) resource guides (a faculty guide for serving the disabled, career guidance for students with disabilities, vocational skills assessment); (3) curriculum materials (basic math curriculum for blind students); (4) audiovisual materials (technical sign language videotapes); and (5) reference materials (a catalog of career guidance materials for use with students with disabilities). Each entry includes name of developing organization, specific products and their availability, evidence of effectiveness, usefulness, or impact, and contact persons who serve as sources of additional information. (CL)

**Therapeutic Ceramic Program for Special Students: Staff Development Manual.**
Montgomery County Intermediate Unit 23, Norristown, PA.
Pub Date—Apr 86
Note—38p.; Paper presented at the Annual Convention of the Council for Exceptional Children (64th, New Orleans, LA, March 31-April 4, 1986).
Pub Type— Speeches/Meeting Papers (150) — Guides - Classroom - Teacher (052)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—*Art Activities, Art Materials, *Ceramics, Childrens Art, Creative Expression, *Disabilities, Elementary Secondary Education, Lesson Plans, Teaching Methods
The paper describes ways of incorporating a ceramic program into existing curricula for exceptional children. The program focuses on the process of producing clay products and has as its goals: tension release, heightened self-image, improved coordination, personal growth and emotional maturity. The manual describes organizatonal structure, goals, materials, lesson plans, and evaluation procedures. Implementation guidelines address affective, motoric, and aesthetic goals. Lesson plans specify contents of six 1.5 hour sessions: (1) introduction and pinch pot; (2) coil pot; (3) glaze; (4) slab technique; (5) animal sculpture; and (6) review of glazing. Evaluation suggestions include informal staff and student evaluation. Information on field testing, pottery terms, glazing, kiln management, safety precautions, and additional resources conclude the paper. (CL)

**Exposure to Metal Pollutants and Behavioral Disorders in Children: A Review of the Evidence.**
Pub Date—Apr 86
Note—37p.; Paper presented at the Annual Convention of the Council for Exceptional Children (64th, New Orleans, LA, March 31-April 4, 1986).

Pub Type— Speeches/Meeting Papers (150) — Information Analyses (070)
EDRS Price - MF01/PC02 Plus Postage.
Descriptors—*Behavior Disorders, *Environmental Influences, *Etiology, Lead Poisoning, *Metals, Neurological Impairments, Physical Environment, Research Problems
Identifiers—*Pollutants
The paper reviews research on effects of metal pollutants on behavioral disorders in children. Methodological programs of studies conducted in the 1970's are described. Research since 1980 is then addressed in terms of general population studies and studies of behaviorally disordered populations. Findings of research on the latter subject group are examined in criteria for establishing causative relationships: (1) strong associations; (2) consistency of the observed association; (3) dose-response relationships; and (4) biological plausibility. It is concluded that, despite methodological flaws, the studies show an association of behavioral deficits with low or moderate metal levels. A reference list containing 61 entries concludes the report. (CL)

*Carducci, Dewey J. Carducci, Judith B.*
**The Use of Control Theory in the Caring Classroom.**
Pub Date—1 Apr 86
Note—20p.; Paper presented at the Annual Meeting of the Council for Exceptional Children (64th, New Orleans, LA, March 31-April 4, 1986).
Pub Type— Speeches/Meeting Papers (150) — Opinion Papers (120)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—*Behavior Disorders, *Behavior Problems, Elementary Secondary Education, Interpersonal Competence, *Problem Solving, Student Role, Teacher Role, Teaching Methods, Theories
Aspects of W. Glasser's Control Theory are applied to the education of behaviorally disordered students. It is believed that stimulus/response theory and tools are inadequate with this population and that the stress should be on understanding internal motivating forces. The caring classroom, an approach which emphasizes ways to meet both the students' and the teacher's needs in the classroom environment, is described, and its connections with control theory noted. Students learn why they behave as they do, that they choose their behavior, and how to behave more effectively to meet their needs. A case illustration is provided to portray the teacher's and student's role in solving behavior problems. (CL)

**Cluster Analysis of the Luria-Nebraska Neuropsychological Battery with Learning Disabled Adults.**
Pub Date—Aug 85
Note—23p.; Paper presented at the Annual Meeting of the American Psychological Association (93rd, Los Angeles, CA, August 23-27, 1985).
Pub Type— Speeches/Meeting Papers (150) — Reports - Research (143)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—Adults, *Cluster Analysis, *Learning Disabilities, *Neurological Organization, Student Characteristics
Identifiers—*Luria Nebraska Neuropsychological Battery
The study reports a cluster analysis of Luria-Nebraska Neuropsychological Battery sources of 25 learning disabled adults. The cluster analysis suggested the presence of three subgroups within this sample, one having high elevations on the Rhythm, Writing, Reading, and Arithmetic Rhythm scales, the second having an extremely high evelation on the Rhythm scale with lesser elevations on the Motor, Tactile, Vision and academically related scales, and the third subgroup having a normal profile, only remarkable for slight elevations on the Writing and Arithmetic scales. Analyses of variance were performed with cluster membership as the independent variable and various measures from Wechsler Adult Intelligence Scale-Revised and Wide Range Achievement Test as the dependent measures. Essentially all findings were statistically significant, thereby supporting the external validity of the cluster solution. It was suggested that the first subgroup had its difficulties primarily in the language development area, while the second subgroup had its major difficulties in perceptual, attentional and motor skills that support language development. The third subgroup did not appear to have a clearly identifiable neuropsychological basis for its relatively mildly deficient academic performance levels. In general, the study provided preliminary evidence of the capabilities of the Luria-Nebraska Neuropsychological Battery to identify neuropsychological differences among different types of learning disabled adults. (CL)

**Decreasing Pica by Targeting Antecedent Scavenging Behaviors.**
Pub Date—Aug 85
Note—16p.; Paper presented at the Annual Meeting of the American Psychological Association (93rd, Los Angeles, CA, August 23-27, 1985).
Pub Type— Speeches/Meeting Papers (150) — Reports - Research (143)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—*Behavior Change, Behavior Modification, Eating Habits, *Severe Mental Retardation, Young Adults
Identifiers—*Pica Behavior
A nonverbal, severely retarded, 24-year-old female, who had undergone abdominal surgery due to pica (compulsive eating of inedible substances) participated in the study. Antecendent scavenging behavior was reliably identified and redirected. Pica was prevented by using a short duration physical restraint. Giving non-edible items that might be ingested to staff was reinforced. A modified fencing helmet was used as an adjunct to help control pica. Results indicate that scavenging and resultant pica were both significantly reduced. (CL)

**Cognitive Structures of the Gifted: Theoretical Perspectives, Factor Analysis, Triarchic Theories of Intelligence, and Insight Issues.**
Pub Date—Aug 85
Note—13p.; Paper presented at the World Conference on Gifted and Talented Children (6th, Hamburg, West Germany, August 5-9, 1985).
Pub Type— Speeches/Meeting Papers (150) — Information Analyses (070)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—*Cognitive Development, Elementary Secondary Education, Factor Analysis, *Gifted, Intelligence, Meta Analysis, *Theories
The paper reviews research on the cognitive structures of gifted students. Theories of R. Sternberg and his triarchic model of intelligence are described. Sternberg asserts that three processes appear to account for insight: selective encoding, selective combination, and selective comparison. H. Gardner's perspective citing six types of intelligence is also discussed. An attempt at meta-analysis of these perspectives is offered, and it is concluded that gifted students process information more quickly, more expediently, and more insightfully than others, and that they are highly perceptive and insightful in their combining, comparing, and encoding of information. Domains in which gifted students can be distinguished from non-gifted students are identified. (CL)

Descriptors—Blindness, *Career Counseling, College Students, Community Colleges, Education Work Relationship, *Postsecondary Education, Program Development, *Services, State of the Art Reviews, *Transitional Programs, *Visual Impairments, Vocational Adjustment, *Vocational Education, Vocational Rehabilitation
Identifiers—Mississippi
The paper describes background and findings of a study of postsecondary educational programs and services for visually impaired persons in Mississippi. The study focuses on three topics: (1) the status of special adaptive programs in such areas as vocational-technical education, community college, junior college education, and 4-year college education; (2) adequate social and prevocational adjustment training; and (3) the relationship between vocational rehabilitation and special education services. Results showed that Mississippi postsecondary schools typically offer only the minimum support services required by Section 504 of the Vocational Rehabilitation Act of 1973. Those services generally consisted of personal counseling, vocational and career counseling, and vocational assessment. Barriers to successful postsecondary experiences were identified, including absence of adequate counseling services for students and their parents. Recommendations include revision of curricula toward vocational preparation and independent living skills training, increased vocational counselor position, and establishment of comprehensive vocational evaluation centers. (CL)

**Integrating Physically Disabled Students into Physical Education.**
Alberta Dept. of Education, Edmonton. Curriculum Branch.
Pub Date—Nov 85
Note—51p.
Pub Type— Guides - Classroom - Teacher (052)
EDRS Price - MF01/PC03 Plus Postage.
Descriptors—Adapted Physical Education, Classroom Environment, *Classroom Techniques, Diseases, Elementary Secondary Education, *Mainstreaming, Physical Activities, *Physical Disabilities, *Physical Education, Special Health Problems, Teaching Methods
The manual provides guidelines and suggestions for integrating physically disabled students into physical education classes. An introductory section reviews the process of and rationale for integration. A section on students with special needs emphasizes that although physically disabled students may differ in some ways, they have the same needs and learn the same way as non-disabled students. Attempts to structure the least restrictive environment for disabled students in physical education classes involve the teacher's attitude, the student's potential for movement and activity, and the learning environment. Separate sections address planning (pre-assessment, assessment, and appropriate individual goals) and implementation (structuring the environment and adapting activities). Specific suggestions for adapting aquatics, dance, fitness, games, gymnastics, outdoor pursuits, and track and field are followed by descriptions of five common disabilities: obesity, physical awkwardness, asthma, epilepsy, and diabetes. (CL)

Descriptors—*Disabilities, Elementary Secondary Education, Equal Education, Individualized Education Programs, *Parent Participation, *Parent Role, Parent School Relationship, *Special Education, Student Evaluation, Student Placement
Identifiers—*New Jersey
The booklet is intended to acquaint parents of handicapped children in New Jersey with their rights. Information is provided on types of handicaps and the rights of a handicapped child (free appropriate public education, evaluation, classification, Individualized Education Program, and placement). Parental rights are explained, with special attention to student records. Review and mediation, hearings, and appeals are covered, as are a number of special situations, including preschool handicapped children; children with mild speech problems or temporary illness or injury; discipline; and children whose parents cannot be located. Appended materials include addresses of New Jersey agencies. (CL)

**The Status of Handicapped Children in Head Start Programs. Twelfth Annual Report of the U.S. Department of Health and Human Services Provided to the Congress of the United States on Services Provided to Handicapped Children in Project Head Start.**
Administration for Children, Youth, and Families (DHHS), Washington, DC. Head Start Bureau.
Pub Date—85
Note—44p.
Pub Type— Reports - Evaluative (142)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—*Disabilities, Health Services, *Incidence, Outreach Programs, *Preschool Education, Services, Student Evaluation
Identifiers—*Project Head Start
The report analyzes the status of handicapped children in Project Head Start from 1983-84. Following an overview of Head Start policies on services to handicapped children, the report describes questionnaire content. Detailed findings are then presented for the following topics: number of handicapped children enrolled in Head Start programs, types of handicaps, severity of handicaps, outreach and recruitment, diagnosis and assessment of handicapped children, mainstreaming and special services, and coordination with other agencies. Among findings are an increase of 4,431 in the number of handicapped students served from 1983 to 1984; an increase in the percent enrollment of students diagnosed as handicapped; and enrollment of at least one handicapped child in 98.6% of all Head Start programs. Services included education, parent involvement, social services, and health services. (CL)

Descriptors—*Disabilities, High Risk Persons, Infants, *Policy Formation, Program Development, *Program Implementation, State Legislation, *State Programs, Young Children
The paper explores policy options for beginning, expanding, or establishing services for disabled and at-risk infants and toddlers in a state. An initial section outlines characteristic advantages and drawbacks of options in three areas: legislative action (mandatory, phase-in, and non-mandatory legislation), executive action, and interagency agreements. Considerations in policy planning are examined, including the population to be served, agency responsibilities, personnel, and procedural safeguards and accountability. Questions are posed regarding the planning process as well as the content of policy and/or legislation, with suggestions offered to avoid common pitfalls. Appended materials include a reference list, a profile of states' mandated age of eligibility for preschool elementary school special education services, a matrix summarizing state legislation, a chart of state agencies responsible for educational services to handicapped preschool children, a chart summarizing the current status of all states on major special education dimensions (including state consultant names and phone numbers), and a synopsis of states by federal program networks. The booklet presents excerpts from a December 1984 conference (Washington, D.C.) on disabled and at-risk infants, toddlers, and their families. Parents' perspectives are offered on care for medically vulnerable infants and children (by the mother of a ventilator-assisted child), services for children with mild developmental delays (by a mother of a premature infant), and the effects on the family of a severely and/or multiply handicapped child. The keynote address explores the emotional needs of parents coping with the birth and life or death of a potentially disabled child and emphasizes the need for emotional support and information. A final paper describes negative assumptions held by professionals about parents' ability to objectively observe, set appropriate goals, and teach their children. (CL)

**Special Education Council Mainstreaming Study, 1984.**
Saint Paul Public Schools, Minn.
Pub Date—Nov 84
Note—88p.; Report of the "Task Force on Mainstreaming" to the Special Education Council. A tutorial based on this document entitled "Mainstreaming: How It Is Viewed by Teachers, Administrators, and Parents" was presented at the Annual Meeting of the Council for Exceptional Children (64th, New Orleans, LA, March 31-April 4, 1986). Appendix is barely legible.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC04 Plus Postage.**
Descriptors—*Administrator Attitudes, *Disabilities, Elementary Secondary Education, *Mainstreaming, *Parent Attitudes, Success, *Teacher Attitudes, *Teacher Role
Identifiers—*Minnesota (Saint Paul)
The task force report describes development and results of a questionnaire on mainstreaming completed by 122 parents of special education students and 458 regular and special education teachers, administrators, and support staff. Findings include the following: special education staff are seen as the most interested, knowledgeable, and supportive of mainstreaming although implementation responsibility of mainstreaming falls on regular educators; class size and teacher workloads are of great concern; regular educators are more concerned with the effects of mainstreaming on regular education students and consider the teacher's attitude less important to the special student's success; and special educators are more concerned about mainstreaming effects on the special education student and generally view the teacher's attitude as critical to student success. Recommendations are offered regarding student count, staffing patterns and needs, inservice education needs, and suggested strategies for improving communication, attitudes, and competencies. An appendix supplies responses to a question on concerns about mainstreaming. (CL)

Descriptors—*Cognitive Development, *Cognitive Processes, *Cognitive Style, Elementary Secondary Education, Field Dependence Independence, *Gifted, Interpersonal Competence, Problem Solving
Research on the nature of gifted children's learning is reviewed. Studies are cited on the following topics: cognitive style (learning style preferences, field independence/dependence, locus of control, and hemispheric specialization), cognitive development (differentiated stage development), cognitive strategy selection (components of problem solving); and social and emotional characteristics (interpersonal sensitivity, social cognition). Environmental factors influencing giftedness are cited, including exposure to content, practice in divergent thinking, critical analysis techniques, and communications skills development. An annotated reference list is appended. (CL)

A unique program established a partnership between a speech and language pathologist and a local industry. The pathologist spent 6 summer weeks working in the Human Resources Department to obtain a knowledge of the pragmatic language skills needed to prepare students for gainful employment and to learn what type of modifications are needed for physically handicapped students to use a computer at a job setting. During the school year, business experts came to the school to teach interview techniques and discuss career opportunities. (Author/CL)

**Training Gaze Direction in Blind Children: Attitude Effects on the Sighted.**
Pub Date—Apr 86
Note—46p.; Paper presented at the Annual Convention of the Council for Exceptional Children (64th, New Orleans, LA, March 31-April 4,1986).
Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Blindness, *Competence, Elementary Education, *Interpersonal Competence, *Visual Impairments
Identifiers—*Gaze Patterns
The study assessed the extent to which the presence of gaze direction affected sighted raters' perceived evaluation of the competence levels of elementary-aged visually impaired children. Sighted individuals (N=160) were randomly assigned to view one of four randomized videotapes of two visually impaired children without gaze direction (pre-training skill level) and two children with gaze direction (post-training skill level). All raters viewed the same children although not necessarily in the same condition. Each videotaped sequence showed a child responding to a randomized set of questions while involved in a conversation with two adults. A mixed design, one between-one within-subjects design, was employed to assess the main effects of the one factor which was randomized (the videotape viewing groups), and the one factor which involved repeated measures (Condition 1–pre-training skill level video sequences, and Condition 2–post-training skill level video sequences). Analyses revealed that when children manifested proper gaze direction they were evaluated as having higher social competence, as being more intelligent, and as having a greater ability to compete in the sighted world as an adult. The reports document achievements of early intervention programs (EIPs) for handicapped infants

and young children in Massachusetts. The first report focuses on Project Access V and on evaluation of four major evaluation outcomes: (1) statutory compliance and generic impact of P.L. 89-313 expenditures; (2) overall P.L. 89-313 grant management and coordination; (3) population study and modal data collection procedures within EIPs; and (4) the automated information management system related to P.L. 89-313 fiscal, personnel, and impact data. Findings are summarized and recommendations offered for the P.L. 89-313 process and for EIPs in general. The second report presents similar evaluation data for fiscal year 85. Both reports cite programs' fidelity between contractual obligations and actual expenditures as well as substantial efficiency and equitability in the contract approval and management process. (CL)

**EDRS Price - MF01/PC04 Plus Postage.**
Descriptors—*Affective Behavior, Behavior Modification, Curriculum Guides, Elementary Secondary Education, *Emotional Disturbances, *Reinforcement, *Self Control
The curriculum is designed to provide classroom teachers of elementary emotionally handicapped students with a consistent framework of classroom management techniques and mainstreaming procedures. The curriculum is organized around behavioral improvement at six levels, with responsibilities increasing along with priveleges. Minimum requirements are set forth, including class rules, a point system, behavior charting techniques, and parent communications. Each level is examined in terms of minimum length of stay, percent of mastery, student responsibilities, teacher responsibilities, and student priveleges. The affective curriculum is described in terms of such topics as behavior management, self concept, relaxation therapy, and values clarification. Suggested activities comprise the second part of the guide, with ideas on group and individual reinforcers, consequences, time-out, rule writing, reality therapy, and student priveleges. Examples of charting techniques are provided. (CL)

Descriptors—Affective Behavior, *Behavior Modification, *Curriculum Development, *Emotional Disturbances, *Interpersonal Competence, Problem Solving, Relaxation Training, Secondary Education, Student Role, Teacher Role
The paper is intended as a guide to the levels curriculum for teachers of emotionally handicapped secondary students. The levels curriculum is introduced as a motivational system for behavioral improvement based on a series of steps with increasing student priveleges and responsibilities. Students develop individual goals and learn communication, social, and problem solving skills in affective groups. The curriculum is organized on three basic levels plus an orientation and a disciplinary level. The levels are explained in terms of eligibility, purpose, teacher responsibilities, student responsibilities, student privileges, and criteria for advancement. A section on behavior management addresses such topics as assertive discipline, behavior modification, contingency management, and the differences between discipline and punishment. A discussion of affective education includes guidelines for providing feedback, role playing, life space interviewing, and reality therapy, along with a list of inappropriate responses for communicating with students. Eight relaxation lessons are also included. A section on recordkeeping covers such aspects as anecdotal records, daily levels graphs, mainstream progress reports, and behavior agreements. Bibliographies on behavior management and affective education conclude the document. (CL)

Identifiers—Canada
The paper reviews international research on computer assisted learning (CAL) for special populations and examines the issue in terms of the Canadian policy perspective. Data collection techniques included interviews and field observations with researchers, manufacturers, and policy makers. A generic model is proposed for special education computer applications. A review of research is followed by summary and evaluation of published and unpublished courseware. The potential courseware and related hardware developments based on the generic model are discussed. A concluding chapter proposes a national policy in terms of a federal/provincial governing board, a national dissemination and information network, and national and regional ongoing committees and task forces. A bibliography is followed by extensive appendixes which supply related information on resources, software, software and hardware companies, evaluation and information sources, and correspondence. Pub Type— Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Disabilities, Elementary Secondary Education, Eligibility, *Evaluation Methods, *Profiles, *Student Evaluation, *Student Placement, *Testing

The paper describes the development and use of a General Evaluation Matrix (GEM), a profile technique by which major handicaps are graphically presented along with school grades and achievements in basic skills. The approach lends itself to establishing entry level criteria for special education suited to the needs of specific communities. Prereferral questions document exhaustion of regular education alternatives. An illustration of a GEM profile on a fifth grader is used to explain the contents and use of the profile. Among advantages of the GEM are establishment of specific standards for handicapping conditions and basic skill performance and the opportunity to make comparisons between areas. (CL)

Descriptors—*Disabilities, Elementary Secondary Education, Family Relationship, Prediction, *Self Concept, Sex Differences, *Siblings

The study compared the self-concepts of siblings of handicapped children with norms and examined mediators for this personality variable. Thirty-four siblings of handicapped children (2-15 years old) from the United States and Canada completed a children's self-concept scale while their parents filled out two questionnaires: one on parental attitudes and stress regarding the presence of the handicapped child and the other on the family's social support. The results showed the siblings displaying as high a self-concept as norms. The sex of the handicapped child emerged as a predictor for the self-concept of their siblings: a handicapped brother had more negative impact on a sibling, male or female. Parental attitudes and stress due to parent and child problems in caring for the handicapped child were related to the siblings' self-concept regarding their personal happiness and satisfaction. Parental pessimism showed the same trend. Support from grandparents and relatives assuaged anxiety in the siblings but excessive support tended to lower their self-confidence in their physical appearance and academic competence. (Author/CL)

Descriptors—*Disabilities, Elementary Secondary Education, *Paraprofessional School Personnel, *Role Perception, *Special Education Teachers, *Teacher Attitudes, *Teacher Role

This study investigated differences between teachers' and teacher aides' perceptions of their relationship along the dimensions of authoritative/democratic supervision style, ownership of classroom outcomes, role dynamics of the relationship, and the perceived adequacy of the other participant. Results were obtained through administrations of four subscales consisting of polar adjectives concerning the dimensions of interest to 35 teacher and 34 teacher aides at four sites. Mean scores for both groups indicated that the relationships were viewed positively. Multivariate analysis of variance procedures indicated a significant difference between the teachers and the teacher aides on the set of dependent variable. Stepdown follow up produced a significant difference on the authoritarian/democratic dimension but the remaining residualized variables were not significant. It was concluded that teachers and teacher aides may view their relationship differently and that further study of their relationships is warranted. (Author)

The report presents the history and accomplishments of a mainstreaming program involving an exchange of professional skills among a special education teacher and four regular education teachers of high school English classes in Milford, Massachusetts. Based on results of a teacher survey, a team-teaching program was devised which stressed a diagnostic-prescriptive approach in the regular classroom. Five goals are reviewed: (1) to provide the classroom teacher with assistance for successful program implementation with special needs and low functioning regular education students; (2) to develop accommodations in the regular classroom and the resource room for mainstreamed special students; (3) to develop a classroom survival skills curriculum; (4) to develop a diagnostic approach to secondary language arts programing; and (5) to create a model language arts program. Each of the four participating classes is described. Six questions from student and parent questionnaries are analyzed in depth, regarding employment of reading and writing, homework, and the value of the student's present English class in improving written language skills. Program evaluation results revealed that the greatest gains on writing skills tests were made by students in the mainstream team teaching program for more than 1 year. Recommendations are offered for parent involvement and the inclusion of a developmental reading component in academic content areas. Appendixes include excerpts from the Resource Room Support Service Program and from study guides, program packets, book report forms, and questionnaires. (CL)

**Social Adjustment and Academic Competency of Children with Conduct Disorders.**

Pub Date—Apr 86

Note—36p.; Paper presented at the Annual Convention of the Council for Exceptional Children (64th, New Orleans, LA, March 31-April 4, 1986).

Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Age Differences, *Behavior Disorders, *Competence, Elementary Secondary Education, *Interpersonal Competence, *Maturity (Individuals), *Self Control, *Social Adjustment

The adjustment and competence patterns of boys with conduct disorders were investigated using a developmental approach to psychopathology. The sample consisted of 438 boys divided into two matched subgroups: boys with and without conduct disorders. In each subgroup, three age groups were defined. The Conners Abbreviated Symptom Questionnaire and the Aggressive Behavior Scale assessed the self management level of each child. The Classroom Behavior Inventory was used to assess the levels of competence, and Teacher Adjustment Ratings provided global ratings for the children's classroom situation. The results demonstrated that boys with conduct disorders are distinctive from their control peers on several aspects of social adjustment and academic competence, even at the first stages of their academic experience. The significant maturational change that occurred in the older age groups, of boys without conduct disorders, was not evident in the conduct disordered group, suggesting a developmental arrest in the abilities for controlling and inhibiting behavior. The academic distinction was evident through adolescence, although different developmental processes were demonstrated in the social aspects. The implications for theoretical understanding of the developmental aspects of the syndrome, family perspectives, and psychological interventions in the school are discussed. (Author/CL)]

The materials were developed to help prepare eleventh and twelfth graders to be successful in an academic environment when their school history indicated little chance for success. The booklet includes instructional materials to teach test-taking and note-taking, two skills many failing students lack. A syllabus is included for each unit along with class notes, activity sheets, and unit tests with answer keys. The instructional materials are designed for students with a wide range of skill levels. The test-taking unit covers such topics as strategies for answering multiple choice test items, true-false test questions, fill-in-the-blank questions; preparing for tests; and understanding words used in essay questions. The unit on notetaking addresses such aspects as listening skills and notetaking from lectures and written materials. (CL)

Identifiers—*Logo Programing Language
The paper reports observations from a 2-year investigation of teaching/learning processes as they occurred during microcomputer instruction in three special education schools. Factors in the learner and/or learning environment are analyzed for their effects on the development of problem solving strategies. Part 1 reports observations of behavior of 212 3-to-12-year-olds with language or cognitive impairments in three microcomputer environments (instructional software, Logo, and teacher mediated learning). Behaviors were classified according to a scheme of cognitive distancing. Findings revealed relationships between age and level of cognitive distancing for all treatments, and between treatment and level of cognitive distancing for all ages. Part 2 of the study examined the realtionship between performance in Logo instruction and level of cognitive development from a perspective based on L.S. Vygotsky's theories. A concept attainment task was administered to 15 Ss randomly selected from the larger group targeted for observation. Behaviors on this task were compared to behaviors demonstrated by Ss during interactions with Logo. Results suggested a strong relationship between level of cognitive development and ability to profit from Logo instruction. (Author/CL)

Descriptors—Catalogs, Directories, *Morphology (Languages), *Notional Functional Syllabi, Phonology, *Polish, Reference Materials, Second Language Instruction, Semantics, *Surface Structure, Syntax, Vocabulary
The Polish notions catalog systematizes a variety of informational codes used in Polish, resulting in lists of notions, each presented from a structural perspective. Where applicable, they are accompanied by a morphological component, structural chart, semantic description, frequentative expressions, and related vocabulary items. The notions include: addition, additional lexical component, address, agent, approximation, cause, choice, classification, communication, comparison, condition, contrast, description, direction, goal, location, manner, means, modality, motion, negation, object, origin, personal activities, possession, prevention, quantity, recipient, reference point, result, route, sequence, state, subjectivity, substance, theme, and tool. Appended materials include basic phonological data, morphological charts, and displays of syntagmatic relations. A 10-page bibliography concludes the catalog. (MSE)

While it is a common complaint that there are no established standards for determining what constitutes quality foreign language software, a 1984 review of the literature revealed that there exists more consensus than confusion. Although there are not many articles that directly address the issue of quality software, many writers do touch on the subject. Considerable agreement was found in the areas of content, ease of use (user-friendliness), screen format, and organizational and technical considerations. One area of disagreement was whether or not materials should be scrolled on screen. Other individual differences of opinion were found, relating to the language to be taught or the instructional level, but overall, opinions were found to be quite similar. The literature review was based on a two-year ERIC search and a bibliography put together by Mark Seng of the University of Texas at Austin. (MSE)

Identifiers—*Foreign Language Exploratory Program, Williamsport Area School District PA
This paper analyzes the Williamsport, Pennsylvania, Area School District's foreign language exploration (FLEX) program's effectiveness regarding the students' decisions when electing a sequential program of language courses. The FLEX program in French, German, and Spanish was implemented in three middle schools in the years 1981-85 and was assessed by dual questionnaires, administered in September and in May, and by language enrollment records. Analysis of these data for three school years revealed six student groups: (1) students loyal to their language choices during the school year, (2) students changing languages during the year, (3) students who elected to study a language in September but only decided on a particular language in May, (4) students who decided to study a language in September but decided not to by May, (5) students who elected not to study a language in September but decided to study one by May, and (6) students who remained loyal to their decision not to study a language. Further analysis revealed that the FLEX course experience did influence students in groups 2, 3, 4, and 5 in as many as three out of four cases and that it did not influence students who had chosen not to study a language. In addition, retention rates at some levels in all three languages have improved since the implementation of the FLEX course. Course implementation in earlier grades and rotation of langauge teacher assignment to the FLEX courses are recommended. (MSE)

**English Teaching Profile: Czechoslovakia.**
British Council, London (England). English Language and Literature Div.
Pub Date—Feb 86
Note—8p.
Pub Type— Reports - Descriptive (141) — Information Analyses (070)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Educational Administration, Elementary Secondary Education, *English (Second Language), Foreign Countries, Information Sources, Instructional Materials, International Cooperation, *Language Role, *Language Teachers, Literacy, Literature, Postsecondary Education, Second Language Instruction, Teacher Education, Technical Assistance
Identifiers—*Czechoslovakia
A review of the status of English language instruction in Czechoslovakia begins with an overview of

the role of English in the society in general and outlines the status of English use and instruction in the educational system at all levels. The review also covers the characteristics and training of English language instructors, the type and availability of instructional materials, educational administration and planning in relation to English teaching, British and other international support, commercial opportunities related to English instruction, creative writing, language research, and other sources of information. It is concluded that English is increasingly the language for scientific and other international meetings, and that it enjoys wide popularity among young people. Although not compulsory in the secondary school system, English is an option that has overtaken French and German. It is the most popular language studied in higher education. (MSE)

Descriptors—Class Activities, Classroom Techniques, College Students, *Cultural Context, Cultural Education, *English (Second Language), Higher Education, Learning Motivation, *Listening Comprehension, *Reading Instruction, Second Language Instruction, *Slides, *Teacher Developed Materials, Visual Aids
Identifiers—Japan
It is sometimes difficult to motivate Japanese students to learn English because it is not connected with their everyday life or interests. One method found to be effective at the college level in Japan is to teach students about other cultures in English by preparing slide programs with narration, vocabulary lists, and exercises, supported by background readings with their own exercises. Possible topics for the slide presentations include famous or interesting places, aspects of daily life, ceremonies, and other visually interesting aspects of another country. Background reading should be interesting and relate to the slides, but it need only overlap, not correspond exactly to the narration. Vocabulary lists are developed from the text, possibly with the spelling-check feature of a computer program. Some useful learning activities are skimming, charting, organization, cloze, outline, dictation, correction, and pause and intonation exercises to be used with the readings and narration. A wide variety of followup activities can be used, such as student-prepared slide presentations, visits to famous places in the students' own country, or photograph albums. (MSE)

**Grammatical Theory and L2 Acquisition: A Brief Overview.**
Pub Date—29 Dec 85
Note—27p.; Paper presented at the Annual Meeting of the Linguistic Society of America (Seattle, WA, December 29, 1985).
Pub Type— Information Analyses (070) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Educational Research, *Grammar, *Interlanguage, Language Research, *Language Universals, *Learning Processes, *Linguistic Theory, Literature Reviews, *Second Language Learning
Identifiers—*Markedness
Theories and research on second language acquisition and grammatical theory are reviewed and discussed, especially those concerning the recent interest in understanding the nature of the language-learning faculty. The review includes work in the areas of universal grammar, interlanguage, parameterization of universal grammar, second language learnability, markedness, learning differences between children and adults, other differential learner characteristics and language-processing capabilities, and typological control, and their interrelationships. Problems in research into grammatical theory are also briefly discussed. Four pages of references conclude the document. (MSE)

Descriptors—*Child Language, Higher Education, *Interpersonal Communication, *Language Acquisition, Longitudinal Studies, *Mothers, *Parent Child Relationship, Speech Acts, Toddlers
Part of an 18-month longitudinal investigation of mother-child language-teaching interactions, this study describes changes in mothers' use of eliciting strategies over time as their children's language became more complex. The focus was the adjustments mothers make to fit their behavior to their child's linguistic skills and development. Samples of interactions between mothers and children videotaped in their homes when the children were 16, 21, 24, and 30 months old were analyzed. Mother utterances eliciting child verbalizations were coded for utterance type (specific form, information option seeking, clarification, or modeling), level of cue or amount of support provided by the utterance, and complexity of the expected child response. Child responses were coded according to their degree of correctness. The results suggest that mother expectations for child responses clearly change over time in relation to development in the child's skills, with decreasing cue support for the child's response, increasing interaction frequency, decrease in likelihood of mothers letting their questions go unanswered, and increasing use of repetition when the child does not respond. Modeling was used most frequently as a first elicitation tactic at 21 months, secondarily at 24 months, and infrequently later. (MSE)

**White Students' Judgments of Education and Social Mobility of Black English Speakers.**
Pub Date—[86]
Note—19p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—*Black Dialects, *Black Stereotypes, College Students, Educational Attainment, Education Majors, Higher Education, Language Attitudes, Language Variation, *Racial Bias, *Social Bias, Social Mobility, *Student Attitudes, Teacher Education, *White Students
The study described here concerned the perceptions of White college students in a college of education about the educational, professional, and social status of speakers of Black English. The subjects were 46 students in two undergraduate classes in communication disorders. Each class was presented with a different recording of a passage about a grandfather, one version spoken in Black English and the other spoken in standard English. The students then responded immediately to a semantic differential scale composed of 10 statements alluding to the speaker's educational, professional, economic, and social credibility. Results indicated that the standard English speaker scored higher on all 10 statements on the semantic differential scale, strongly supporting the commonly-held idea that most standard-English-speaking teachers prefer similar speech behavior from their students and that standard English usage is equated with being well educated. It is recommended that increased efforts be made to educate future teachers in the complexities of language and linguistic variation, lessening linguistic prejudices toward Black English. (MSE)

An examination of the word-finding problems and nonverbal communication in the conversations of three aphasic patients revealed three different patterns of communicative strategies and success in different kinds of activities, such as tests and conversation. One, with mainly a parietal lesion, hesitates often with turn-keeping gestures and stops to rephrase in conversation, but has few problems in a naming test. The second, with a lesion affecting the insula and arcuate fasciculus, has fluent speech in conversation, with some word-finding problems but adequate verbal and nonverbal communication. This person has great difficulty in naming and nonverbal tests. The third, with a temporal-parietal lesion, relies heavily on illustrating nonverbal communication and is successful in conversation and spontaneous narration. The third patient, however, experiences little success in naming or in producing isolated gestures or facial expressions. It is suggested that the type of activity must be considered in estimating the degree and type of aphasic symptoms in a patient, because the type of aphasia and demands of the activity seem to interact in determining the communicative strategies or patterns shown by different aphasics. Descriptors—Comparative Analysis, Dialogs (Language), Error Patterns, Form Classes (Languages), Intonation, Language Research, Mild Disabilities, *Neurolinguistics, Phonology, Phrase Structure, *Reading Aloud to Others, Severe Disabilities, *Speech Handicaps, *Story Telling, *Stuttering
A study of overt audible speech behavior in eight male and one female Swedish adults examined the

relationship between disfluency and speaking modality, disfluency type in mild versus severe stutterers, and disfluency and psycholinguistic variables. Three conditions of experimental manipulation were used: reading aloud, reading the longer lines of a brief dialogue, and silent reading and oral retelling of a story. The number of disfluencies and stutterings of nine specific types found in taped segments of each condition were tallied. As a group, the subjects showed an increase in disfluency across the three conditions, but individual patterns varied, with the more severely disfluent having unanticipated reduced stuttering in the third, most spontaneous condition. The psycholinguistic variables of grammatical class, word length, phonological position within a word, word position in the phrase, and syllable stress were also examined in the samples, and clear patterns of disfluency appeared in all but the word position variable. It is concluded that varying both speech material and speech tasks was an effective method for elucidation of various speech characteristics in audible speech behavior, highlighting both quantity and quality of speech disruptions and demonstrating differences between mild and severe stutterers. Descriptors—*Aphasia, Literature Reviews, *Neurolinguistics, *Neurological Organization, Research Methodology, *Speech Therapy, Systems Approach
The goal of all speech rehabilitation methods is the restoration of speech as a unitary higher function. One approach views speech as a complex but coherent system where all levels and components are interconnected. This view takes into consideration the use of verbal communication, which takes place at a higher speech level and includes activity, the knowledge of language, and restoration and understanding of language, extending to the connection between words and things. The specific rehabilitation consists of a set of methods used together to treat an integrated set of functions and defects, with some methods "leading" in their treatment of the specific defect(s) and others "following" to support the functioning of other components of the speech system. A feature of this set of methods is that within each distinct method, a therapy of the concrete defect and the secondary disturbance has to restore speech as a whole system, and the methods must be used systematically. Descriptors—Adults, *Aphasia, *Comprehension, Language Processing, Literature Reviews, Neurolinguistics, Neurological Organization, *Semantics, Sentence Structure, *Spatial Ability, Test Construction, *Time Perspective
Identifiers—*Luria (A R)
A study of eight adult chronic aphasic patients' comprehension of sentences and pictures in which comparisons of time and space were crucial was designed to assess A. R. Luria's approach to designing comprehension test tasks. The investigation required patients, with lesions of varying size and location, to determine whether a sentence expressing temporal or spatial relations or a physical comparison corresponded to a picture presented with it. It was found that comparatives were easiest for the patients to understand, while spatial relations were more difficult, and the temporal relations expressed in the items were almost impossible for the patients to handle. It is concluded that Luria's writings about semantic aphasia and the processing of sentences expressing relationships should be modified, because in this study all aphasics, regardless of lesion site, were especially impaired on sentences where grammar governs syntax and grammatical markers are clearly abstract. According to Luria's theory, the patients' responses should have varied according to lesion site. It is suggested that Luria comes close to contradicting himself in proposing that one brain region should be more important than others in processing relatively complex sentences. (MSE)

Descriptors—*Aphasia, Comparative Analysis, *Error Patterns, *Generative Grammar, *Linguistic Theory, *Neurolinguistics, Semantics, Speech Skills, Structural Analysis (Linguistics), Writing Skills
This paper examines the tacit assumptions behind different theories about the nature of language and aphasia, and it discusses critically the use of structural and generative linguistic theories to explain the behavior of aphasics, especially with regard to the difference between spoken and written discourse. It is proposed that, rather than try to fit aphasic language behavior to linguistic theory, researchers must study the actual language behavior of aphasics more thoroughly before constructing any model of language behavior based on aphasia. It is thought that further knowledge of aphasic speech errors would reveal a variety of "normal" strategies used by aphasics to compensate for speech difficulties. A three-page list of references is included. (MSE)

Descriptors—*Alcoholism, Language Processing, Language Tests, *Neurolinguistics, *Neurological Impairments, *Problem Solving, Task Analysis, *Vocabulary Skills
It is suggested that models of human problem solving are useful in the analysis of word fluency (WF) test performance. In problem-solving terms, WF tasks would require the subject to define and clarify the conditions of the task (task acquisition), select and employ appropriate strategies, and monitor one's performance. In modern neuropsychology, the frontal lobes have been attributed a crucial role in general problem solving. A simple information-processing model is applied to preliminary experimental and clinical data on qualitative features in neurological patients' WF performance. The study in question was performed at the Boston Veterans Administration Hospital. The WF results are part of a project which focused on the problem-solving skills of chronic alcoholics. It is proposed that the model reveals a hierarchy in the susceptibility of the problem-solving components (task acquisition, strategy selection, and monitoring) to neural damage. Figures and tables illustrate the text. (MSE)

Identifiers—*Dialysis
Dialysis encephalopathy is a progressive neurological disorder occurring after long-term hemodialysis in some renal failure patients. Accumulation of aluminum in the brain is suspected as its cause, and the use of reverse osmosis of the dialysis water and administration of desferrioxamine to the patient have been successful in reducing the accumulation of aluminum. Typical communication disorders in patients with dialysis encephalopathy include forms of dysfluency, articulatory dysfunction, disorders of phonation and prosody, language deficits, and generalized neuropsychological disturbances, including dementia. A case study of one 48-year-old female patient found that the use of reverse osmosis and desferrioxamine stopped the progression of the disease and brought about a perceptible improvement of functions. It is also concluded that early and careful assessment of speech and language functions is important for the early detection and treatment of dialysis encephalopathy. (MSE)

Descriptors—Clinical Diagnosis, Comparative Analysis, *Language Handicaps, *Memory, *Neurolinguistics, *Semantics, *Vocabulary Skills
Identifiers—*Alzheimers Disease, *Vascular Dementia
A study of 21 patients with Alzheimer's Disease and 25 with vascular dementia, the two most common forms of dementia, investigated language impairments in the dementia syndrome to see if analysis of language disturbances is helpful in differential diagnosis. Diagnostic assessment included a neurological examination, detailed medical history, screening laboratory tests, an investigation of the cerebrospinal fluid, a Luria-based neuropsychological test battery, analysis of language impairment, electroencephalography, and computerized tomography. Language testing included the Token Test and Short Aphasia Examination. The Alzheimer group, as a whole, had a slightly higher degree of dementia. All the functions tested were impaired in both dementia groups, although the degree of impairment was more severe in all areas in Alzheimer's disease. The language impairment correlated very significantly with the severity of dementia in both groups. It is concluded that different areas of language functions are affected in early Alzheimer's disease and vascular dementia, and in some patients, analysis of language might be helpful in a differential diagnosis of dementia. Identifiers—*Neologism
Examination of the lexical errors (phonological paraphasias and neologisms) of two posterior aphasic patients who are speakers of Finnish, a highly synthetic language, revealed that the lexical difficulties generally typical of posterior aphasics were found in these patients as well. The typical lexical difficulties clustered around open class words such as nouns, verbs, and adjectives. In such patients phonological paraphasias make up 60 percent of the errors. The results of this study show that posterior

aphasia patients exhibit more errors toward the end of words, peaking around the 4th to 6th phoneme. In addition, the data suggest that paraphasias tend to occur after word formation rules have been applied and that neologisms are probably formed before application of word formation rules. The patterns of morphosyntactic marker errors also suggest that surface case marking carries some consistent deviations. The limited usefulness of the traditional one-component view of phonology is emphasized, and it is proposed that the formal aspect of words can be maltreated at various stages of language production. Identifiers—*Fragile X Syndrome, *X Chromosomal Abnormalities
Analysis of the phonological patterns of two physically normal boys, aged 5 and 8 years, with fragile X syndrome, an X-chromosomal abnormality usually connected with severe to moderate mental retardation, found language features similar to those found in other studies of fragile X speech. Some of these language features are: repetition of initial syllables, perseverations, unintelligibility, and in one or the other child, incoherence, comprehension problems, and fast speech tempo. These linguistic features are similar to speech characteristics of normally-intelligent children with developmental apraxis of speech. Systematic vowel errors and errors in place, manner of articulation, and sonority of consonants were also found. (MSE)

Descriptors—*Behavioral Science Research, *Case Studies, Comparative Analysis, *Experimental Groups, *Neurolinguistics, *Research Design, *Research Methodology
A major debate exists in the neuropsychology community concerning whether case study is preferable to group study of brain-damaged patients. So far, the discussion has been limited to the advantages and disadvantages of both methods, with the assumption that neurolinguists pursue a single goal attainable by one or the other method. Practical considerations determine the substance and methodologies of research, and they often influence and constrain the questions asked, contrary to a popular myth that the research question comes first. A historical review of case and group studies and their contributions to the development of neurolinguistics, and of some work in progress or recently completed, including some studies using a hybrid design, reveals a wide range of options between the pure case study and ideal large group study, with specific benefits found in each. There is a logical progression to the kinds of studies the behavioral scientist can do: first, a phenomenological study, either case or group, to describe what may be pertinent to the topic; then, examination of the phenomenon's frequency of occurrence, its elements, and perhaps their interactions; studies of different subgroups; and finally descriptive or theory-driven group studies of the phenomenon's universality. Descriptors—*Articulation (Speech), Child Language, Clinical Diagnosis, *High Risk Persons, *Language Handicaps, Neurolinguistics, *Perinatal Influences, *Speech Handicaps, *Young Children
This study attempted to clarify the kind of correlations that can be found in the speech behavior of high-risk children in comparison with children without neonatal risk complications. The study concentrated on the articulatory ability of 430 five-year-old children with neonatal risk complications; it applied a cross-disciplinary diagnosis (child neurology, speech pathology, and psychology) to discover the extent to which certain risk factors influenced speech behavior, language, and psycholinguistic abilities. The results were compared with those of a control group of 115 children of corresponding ages, without any pregnancy, delivery, or neonatal risk. Analysis of the data revealed that there were two groups among the children with extremely slow neurodevelopmental maturation: children with severe articulation problems and a low linguistic performance level and children with phonological disorders and a normal linguistic level. Corresponding neurodevelopmental distinctions did not occur in the control group. This finding suggests that neonatal risk factors influence speech disabilities in the experimental group. (MSE)

Descriptors—*Aphasia, *Classification, *Clinical Diagnosis, Comparative Analysis, Individual Characteristics, *Labeling (of Persons), Medicine, Neurolinguistics, Psychological Characteristics, Psychometrics, Rehabilitation, Research Methodology, *Speech Handicaps, Speech Therapy
The use of a traditional syndrome-classification system for aphasics is examined critically from the different perspectives of medicine and psychometrics. Medicine views syndromes as dichotomous (present or not present) and necessarily indicative of an underlying pathognomic state or process, and psychometrics sees performances as varying along a continuum. The issues of the pragmatic value of syndromes, or their correctness versus their fruitfulness, and the procedures for identifying syndromes are discussed in the context of recent research. The use of distinctive recovery patterns as a means of classifying aphasics and determining the appropriate therapeutic approach for each is proposed and illustrated with a model. (MSE)

Identifiers—*Labov (William), *Speech Accommodation
Three questions in the application of native-language sociolinguistic theories to second language contexts are addressed: (1) Is transfer always a psycholinguistic process of interlingual overgeneralization? (2) Does attention to speech underlie all style shifting? (3) Is H. Giles' Speech Accommodation Theory adequate to explain all purposeful style shifting? From examination and comparison of the psycholinguistic and sociolinguistic aspects of interlanguage and interference, of Labov's definition of style shifting, and of the limitations of the Speech Accommodation Theory, it is concluded that neither Labov's nor Giles' model adequately describes or explains the variation in interlanguage. The findings indicate that, while the insights of native-language theories have increased the understanding of second language learning, they have not provided all the answers. (MSE)

**Reservations About the Labovian Paradigm of Style Shifting and Its Extension to the Study of Interlanguage. Revised.**
Pub Date—Sep 85
Note—31p.
Pub Type— Reports - Research (143) — Opinion Papers (120)
EDRS Price - MF01/PC02 Plus Postage.
Descriptors—Comparative Analysis, *Interlanguage, Language Research, *Language Styles, Language Variation, *Linguistic Theory, Social Psychology, Sociolinguistics
Identifiers—*Labov (William), *Speech Accommodation
An examination of the social psychological basis of style shifting suggests that, contrary to Labovian theory, many style shifts are not a function of shifts in attention to speech and that there are other more explanatory ways of analyzing style shifts. Some reasons for this view are: (1) attention to speech is sometimes negatively correlated with standardness or correctness; (2) style can be manifested in speech shifts that do not fall along the standardness or correctness dimensions; and (3) attention to speech is inadequate as an explanation for style shifting in most situations and can be causally unrelated to style shifting in either experimental or naturalistic situations. Four major categories of stylistic variation that do not fit the accommodation paradigm but complement it are grouped and referred to as "extravergence": interlanguage variation used as learning, communication, or performance strategies by second language speakers; systematic variation according to attention to speech; systematic variation according to linguistic environment; and systematic variation for other social psychological purposes, such as conforming to norms, negotiation, and self-expression. Six pages of references conclude the document. (MSE)

Descriptors—Child Language, Interpersonal Communication, *Language Acquisition, Language Research, *Language Styles, *Language Usage, *Mental Retardation, *Mothers, *Parent Child Relationship, Questioning Techniques
A study of mother-child interaction focused on the contingent responses children make to various mother strategies to elicit language and the mothers' frequency of using that tactic. The subjects were six normal and four retarded children, matched for general language skills, and their mothers. Mother-child interactions videotaped at home were coded for the potential teaching functions of the mother utterances and the pragmatic functions of the child behaviors. It was found that the mothers of retarded and normal children were similar in terms of general language usage and number of utterances but that the tactics the mothers used to elicit verbal behavior were different. Both groups used all four defined tactics, but mothers of retarded children relied significantly more on modeling, and mothers of normal children showed a more balanced use of strategies. Analysis of child responsiveness showed that normal children were generally more responsive, but not significantly. The correctness of child responses was analyzed as well as the relationship between frequency of mother use of a tactic and frequency of spontaneous speech. Further research on the differential interaction between mothers of normal and handicapped children is recommended. Several tables and graphs are included. (MSE)

Identifiers—*Yugoslavia
A review of the status of English language instruction in Yugoslavia begins with an overview of the role of English in the society in general and outlines the status of English use and instruction in the educational system at all levels. The review also covers the characteristics and training of English language instructors, the type and availability of instructional materials, educational administration and planning in relation to English teaching, British and other international support, commercial opportunities related to English instruction, creative writing, language research, and other sources of information. It is concluded that while English is not used for instruction or communication within the country, it is considered the most important language of international communication for politics and trade, technology and the sciences, humanities, touriam, and entertainment. Although in general, literature teaching is highly traditional, there is interest in making the syllabus more relevant and introducing more contemporary literature. (MSE)

Descriptors—Administrator Attitudes, *Bilingual Education Programs, Bilingualism, Curriculum Development, Educational Policy, English (Second Language), *Language of Instruction, *Program Implementation, *School Policy, State Standards, *Teacher Qualifications, Time Factors (Learning)
Rather than abandon bilingual education programs that have not met expectations, there is a need to assess implementation procedures in bilingual programs to determine whether or not they foster success or failure. Areas to be examined for insights and improvement include: (1) present policies concerning the goal of bilingual education and current expectations, (2) research data available on first language acquisition and learning and its application to instructional procedures, (3) curricular decisions that often ignore basic research findings and yet claim they are doing so in the name of bilingual education, and (4) implementation procedures that do more harm than good, such as federal and state guidelines, school administration policies, and teacher qualification standards. Descriptors—Administrator Guides, *Bilingual Education Programs, Educational Objectives, Elementary Education, English (Second Language), *Evaluation Criteria, Language of Instruction, Language Proficiency, *Program Effectiveness, *Program Evaluation, Teacher Qualifications
This bilingual program quality review instrument is intended as a guide for school district personnel to design and improve bilingual eduation programs. It can be used for the following purposes: as an on-site review instrument to provide formative evaluation input about language-minority group programs; as a device for collecting information at the project, school, and classroom levels to identify current practices and promising developments in bilingual education; and as a vehicle for promoting research-based standards for the operation of bilingual education programs. The instrument consists of a bilingual program profile form for recording program enrollment information, funding sources, teacher credential status, and teaching aide usage information; operational definitions of terminology used in the instrument and its documentation; and a form for recording information about features related to program quality, including primary language development, second-langauge acquisition, classroom management, staffing and staff development, and family services. Background information about the instrument, its development, and its application, and a six-page bibliography are included. (MSE)

**Cohesion in Interlanguage: A Study of Conjunction.**
Pub Date—Aug 80
Note—46p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Adverbs, *Coherence, *English (Second Language), Foreign Nationals, *Interlanguage, Japanese, Korean, Mandarin Chinese, Prepositions, Second Language Learning, *Speech Communication, Structural Analysis (Linguistics), Syntax, Thai
Identifiers—*Asians, *Conjunction
A study of textual cohesion in the oral discourse of learners of English as a second language had as subjects 19 Asians from 4 language backgrounds, who were living and, in most cases, studying English in the United States. Analysis of taped conversations focused on the use of conjunctive adjuncts of three kinds: (1) simple adverbs (e.g., and, but, so, next) used to provide cohesion between sentences, (2) compound adverbs (e.g., furthermore, nevertheless), and (3) prepositional expressions (e.g., as a result of that). The conversations were coded for omission, insertion or substitution, and contextual error of conjunctive elements. The frequency of causal, adversative, additive, and temporal conjunctions was calculated for language background group and English proficiency level. It was found that, contrary to expectation, most conjunctive relations were correct but that most were external and not mandated by the speaker's desire to impose cohesion on his or her communication. The expectation of a high rate of omission errors was also contradicted, with substitution errors the most common and omission errors the least common. It was also found that the subjects who were studying English never omitted a required conjunctive adjunct and that neither the proportion of conjunctive adjuncts used nor the proportion of errors was related to proficiency level or language background, except for the Thais. Descriptors—Course Evaluation, *Inservice Teacher Education, *Intensive Language Courses, Language Skills, *Language Teachers, Professional Development, *Program Development, Secondary School Teachers, *Workshops
This paper presents suggestions for increasing the effectiveness of intensive language workshops designed to upgrade and reinforce the language skills of high school foreign language teachers. Once the decision has been made to organize a workshop, the following steps might be taken: identifying the range of needs and interests of the teacher-participants, including the objectives of their home programs; establishing specific workshop objectives and selecting an organizational format from among several; structuring opportunities for teacher interaction; evaluating the teachers' language skills from writing samples, pre-workshop questionnaires, and interviews; and preparing for a workshop evaluation through participant surveys and comparison of pre-and post-workshop writing samples. A sample evaluation form is included. (MSE)

Identifiers—*Total Physical Response, University of Texas Austin
An experimental first-year college German course offered at the University of Texas at Austin emphasized communication, with a complementary deemphasis on morphologically correct forms in spoken or written production. A modification of the Total Physical Response method was used to orient the students, and at four weeks the emphasis was shifted to the primary objective of reading comprehension. Standardized reading and listening comprehension test scores for the group indicated that the students performed above the national norms; student motivation, attrition, and course preregistration rates were found to have improved significantly. The program has been extended into two third semester courses, one emphasizing aural comprehension and the other focusing on oral discussion of German literature. Research on the optimal schedule for introducing vocabulary and grammar concepts and for requiring production of morphologically correct forms in the first two semesters continues. Included in the text are a number of techniques and activities intended to help students understand a reading selection.(MSE)

Descriptors—Behavioral Objectives, *Class Activities, Classroom Techniques, *Communicative Competence (Languages), *Form Classes (Languages), German, *Grammar, Higher Education, *Nonverbal Communication, Pattern Drills (Language), Secondary Education, Second Language Instruction, Student Participation
Identifiers—*Total Physical Response
This paper discusses adaptation of the Total Physical Response technique, as used in a college German course, to the learning of grammar in high school second language courses. It is proposed that direct methods involving physical action can be used to teach and test production of almost any traditional grammar item and retain the motivational advantages of active contextual practice. Specific grammatical objectives and appropriate classroom techniques and activities are described for these areas of grammar: use of appropriate pronoun and verb forms to describe actions as they are performed, giving commands that can be acted out, shifting verb tense or voice to give a more precise description of an action being performed, negating sentences, using the appropriate case of objects of verbs and prepositions, producing possessive adjectives and pronouns, using the correct plural forms of familiar nouns, and changing word order when elements are deleted from or added to a sentence. A list of additional drills is appended. (MSE)

Descriptors—*Cloze Procedure, College Students, *Context Clues, *English (Second Language), Foreign Students, Higher Education, *Language Tests, Learning Processes, Reading Comprehension, Second Language Learning, *Sentence Structure, *Test Construction
A study of the information gained by students in the process of taking a cloze test in English as a second language was conducted with 34 full-time undergraduate foreign students at a state university. The subjects came from a variety of native language backgrounds. A 35-item cloze test was developed in which every eighth word was deleted, beginning with the thirty-second word. Each deletion belonged to one of these structural categories: local (clues found within two words of the blank space), clause (clues found within the simple clause but beyond two words), subordinate sentence (clues found within the subordinate or main clause attached to the clause within which the blank appears), and same paragraph (clues found within the paragraph). The test was administered in a class period, and three weeks later, the intact version of the entire passage was given to the class to read, followed immediately by a second administration of the same cloze test. Exact-word scoring was used. Analysis of the pre-and post-test results showed a significant improvement in scores, but indicated that the location of clues had no significant effect on the responses. The results suggest that the structural categories of the deletions are not crucial in the linguistic processing of written text. (MSE)

Descriptors—*Alaska Natives, *Community Centers, *Community Education, *Educational Change, *Folk Culture, Language of Instruction, Native Language Instruction, Social Change, *Sociocultural Patterns
Identifiers—Inupiaq (Language), *Inupiat (Tribe)
In many Inupiat communities the traditional meeting house, the "qargi," was the first institution to vanish as churches and schools became the dominant forces of change. At present, the Inupiat elders have no responsibility for the formal education of the young Inupiat. The educational environment of each Inupiat community can be altered to make the Inupiat comfortable in teaching their young people the Inupiat way of life by the re-establishment of community centers devoted to the teaching of traditional skills and values to youth, in Inupiaq, by their parents and elders. The western school and Inupiat "qargi" need not be competitive institutions but should complement each other. Other community groups and institutions, including universities, can take part in the projects and programs developed. The revitalization of the "qargi" and traditional Inupiat instruction can contribute to the revitalization of the language, improvement of community participation, the development of Inupiat materials and teaching skills, and the strengthening of the community's cultural base. **Black Students' Responses to Oral Instructions Presented in Black English Versus Standard English.**
Pub Date—[86]
Note—34p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—*Black Dialects, *Black Students, *Black Teachers, *Classroom Communication, Comparative Analysis, Language Attitudes, *Listening Comprehension, Standard Spoken Usage, *Student Attitudes, Teacher Behavior, Teacher Student Relationship
A study investigated whether students comprehend more from a Black teacher using Black English and whether Black students view a Black teacher using Black dialect as being more credible than one without Black speech characteristics. The research consisted of a pilot study with White students to test the appropriateness of the instruments and methodology developed, and a full-scale study with 72 Black high school speech students who were divided into three groups. Two 12-minute audiotapes providing instructional material in both standard English and Black dialect, spoken by the same individual, were presented to two of the student groups as a normal classroom exercise, with the third group maintained as a control group. Following the tapes, the two experimental groups were asked to complete an information test and semantic differential scales concerning the expertise, dynamism, and friendliness of the speaker; the third group completed only the information test. Analysis of the results suggested that there was a difference in comprehension between the two treatments, but that it was statistically insignificant. It also suggested that there was a perceived difference in credibility, with the Black students rating the Black speech as more credible, but that this difference also was statistically insignificant. Descriptors—Class Activities, *Classroom Techniques, *Cultural Awareness, Diaries, *German, Learning Activities, Second Language Instruction, *Study Abroad, Summer Programs, *Vocabulary Development, *Writing Exercises, Writing Skills
This paper describes techniques used by a German instructor with American students during a summer abroad program. Learning activities, both in and outside of class, concentrate on writing. The students keep logs and diaries, which force them to be aware of their surroundings and to participate more actively in the life around them. With the diaries as a basis, class discussion progresses through the events of an ordinary day, beginning with the alarm going off in the morning, and expands into less routine events and activities. The logs or diaries are submitted and corrected daily, with mistakes counted only if they are repeated after initial correction. Another writing exercise requires that students paraphrase or report on information found in newspapers, magazines, and advertising, and make cultural comparisons. A third assignment involves critiques of films seen at local theaters. A fourth approach uses a game in which students draw three pieces of paper from each of five piles containing nouns, verbs, adjectives, adver-

bial phrases, and miscellaneous forms (pronouns, verbs, exclamations, proper names, etc.) in German. The students use what they drew to write a half-page story that is mysterious, dramatic, or funny. The exercises develop language and writing skills as well as cultural awareness, all of which are an essential part of complete language learning. (MSE)

In addition to using films in the German classroom to introduce students to German culture and history, it is important to show and study the film as film. This procedure emphasizes the importance of the film as a part of creative arts in Germany and demands student participation in observation and discussion. Many German silent films are accessible and reasonably priced, and they can be shown in one or two class periods. Silent films are appropriate to any language level, with discussion limited only by the students' abilities to express themselves and, to some extent, by the film's visual style. Noteworthy film techniques can be examined, including camera angle and movement, techniques for expressing meaning without sound, special effects, and movement within the film. Cultural and socioeconomic elements can be assessed, including the influence of artistic trends and attitudes toward the United States. (MSE)

The existing German curriculum should be updated to include career-oriented, career-related language courses, especially in German commercial language, since West Germany is one of the world's most important trading countries and the United States is a major trading partner. Language fluency alone is not sufficient for employment in international business. Language students must also have a command of technical business vocabulary and the tone and format of commercial correspondence, as well as an understanding of cultural traditions, social conventions, prejudices, and habits. Knowledge of the formality of German industrial culture and the conventions used in specific business-related situations is essential to conducting business competently and with the confidence of the German businessman. A detailed description of the elements of a German business letter is included as well as examples of various types of business correspondence, in German. (MSE)

Descriptors—Child Language, Contrastive Linguistics, *English, *French, Grammar, *Korean, *Language Acquisition, *Morphology (Languages), *Negative Forms (Language), Pragmatics, Young Children
Identifiers—Markedness
A cross-linguistic study of negation in English, French, and Korean examined the relationship of transparency and position of marker to acquisition of negation. Data were drawn from a longitudinal study of nine children: two native Korean-speakers, two American speakers of English, and five speakers of French. Five of the children were studied for over a year. Mean length of utterance (MLU) in recorded spontaneous speech and age were independent variables measured. The negative forms differ in each language in their transparency between form and meaning, and it was predicted that French-speakers would acquire their more transparent forms first. It was found that all the children began to combine negative markers with other lexical items at a MLU of 1.4-1.5, but that French-speakers acquired it earliest in terms of MLU and age. Variation was found in the acquisition of different negative forms within each language. The results also indicate that all the children preferred preposing the negative form at the early stages of acquisition, contradicting some earlier research. (MSE)

The focus of the study reported here was to investigate people's comprehension ability as a function of the number and type of negations embedded within sentences similar to those which might appear as premises in syllogisms. The subjects were one group of 11 Hispanic and four groups of Anglo students, with 15 in each Anglo group. Thirty-two logically complex sentences containing one, two, or three negations each and certain consistent elements (quantifiers, groups of similar objects, verb, etc.) were constructed, with four or five possible answer sentences corresponding to each sentence. Four sets of sentences were constructed, each containing the 32 basic sentences with portions of the sentences in different positions. One set was administered to the Hispanic group and to one of the Anglo groups; the other three sentence sets were administered to the other three Anglo groups. The subjects were to read the complex sentences and choose a less complex sentence that most closely corresponded to the meaning in the complex sentence. The results indicated that the subjects comprehended best the sentences with discrete rather than continuous descriptive information, and that sentences containing three negations were not well understood. The only difference between the Anglo and Hispanic groups was in the latency of response, a fact possibly explained by their acquisition of English as a first or second language. Possible explanations for the overall and specific findings are examined. (MSE)

Descriptors—*Cognitive Processes, Comprehension, Elementary Education, *English (Second Language), Language of Instruction, Language Proficiency, *Limited English Speaking, *Mathematical Logic, Mathematical Vocabulary, *Mathematics Instruction, *Metacognition, Second Language Learning
A discussion of the connections between mathe-

matics, language, and second language acquisition focuses on four major areas: (1) the nature of mathematical performance, (2) the language of mathematics, (3) problems that mathematics poses for limited-English-proficient (LEP) children learning English as a second language, and (4) mathematics as a facilitator of second language development. It is argued that the effectiveness of mathematics instruction for second language development is more complex than making the language input comprehensible, lowering the affective filter, and providing for interactive situations with peers and the teacher. Successful mathematics processing rests at least in part on the ability to use the very precise language of mathematics in mathematical reasoning. The context-reduced language of mathematics, extensive use of logical connectors, specialized vocabulary and syntactic structures, and appropriate discourse rules all present complex problems to (LEP) children engaged in mathematics discourse. These problems seem to be linked to some underlying deep structures in mathematical thinking, a process that is analogous to cognitive/academic language proficiency. If these relationships are understood and addressed in the mathematics classroom, language need not be a barrier to processing mathematics in a second language. (MSE)

Identifiers—*Kalinga, *Philippines (Luzon)

A collection of texts in Upper Tanudan Kalinga, a language spoken by about 3,000 people in three villages in the Philippines, includes texts recorded and transcribed from native speakers, edited for clarity and style, and checked for accuracy of cultural content. Four types of discourse-genre are represented: narrative-fiction and narrative-factual, procedural, expository, and hortatory. The texts are representative of the dialect spoken by the people of Lubo who call their dialect" Linurubu." Cultural notes and English translations are provided. The main cultural themes of the texts include leadership, marriage and responsibilities toward children, traditional values for living honorably, and the tension between old and new Kalinga values. The position this paper assumes views vocabulary not as single words but as phrases, sentences, and sometimes entire segments of discourse that act as single words. This view of vocabulary would be helpful in: (1) bringing the vocabulary aspect of instruction in English as a second language (ESL) closer to current research in language performance, (2) connecting communicative language teaching and notional functional grammar, and (3) learning the grammatical system of a language. Segments of language of varying length are called formulaic or prefabricated speech. Like individual words, they are stored in memory as units. First language acquisition research that views them as early units of language acquisition suggests that they may be used in second language learning to make storage and retrieval more efficient. Methods for teaching lexical phrases include analysis and creation of variations after a segment is learned, much as a first language is learned; and designing lessons that treat a single, predictable situation focusing on some communicative need and offering a few simple lexical phrases for dealing with that interaction, providing a routinized lexical framework for discourse. Further research into the timing of introduction of controlled variation is needed. (MSE)

While there have been many gains made in second language instruction as a result of the communicative movement, such as increased sensitivity to learner needs, the movement to some extent, may be considered an extension of a general relativism, promoted at the expense of demanding and serious content. Second language educators have become pessimistic, and could have higher expectations for their students. One solution would be to use more sophisticated content. Another approach worth considering is to address the learner's own identity, linking one's willingness to make errors to one's role as a learner, and viewing language learning as an act of identity. Second language educators need to ask what being a speaker of the second language means in the learner's own social context, what social group the learner would join as a user of that language, what kinds of expressions and understandings are appropriate to a user of that language in the learner's home context, and how the learner would wish to be perceived as a user of the second language. Descriptors—*Class Activities, *Classroom Techniques, *Grammar, Listening Comprehension, *Second Language Instruction, Sentence Structure, Story Telling, *Student Motivation, *Vocabulary Development

Four classroom exercises for second language instruction are described. In the first exercise, the teacher tells a story from a skeleton outline. Then the teacher pairs the students, provides them with a series of questions about the story, and invites them to cross out the ones they do not like and then to ask their preferred questions of another pair of participants. The second exercise has students choose one sentence or phrase they liked from a brief passage and discuss the reasons for the choice. The third exercise is concerned with vocabulary review. From a list presented, each student chooses two attractive and two unattractive words and then explains the choices to the class. The fourth exercise, a grammar auction, provides students with a notional sum of money and allows them to bid on sentences according to their grammaticality. (MSE)

Identifiers—*Autotutor

Interactive video allows the learner controlled access to data stored on videodisc or videotape and in the computer, by means of the keyboard. The technology has excellent graphic display capabilities and allows immediate access to any video frame. However, it is not yet possible to record directly onto the videodisc, there is no generally accepted standard system, and minimal materials are available for language instruction. The AUTOTUTOR system was designed specifically for language instruction, was developed from the video vailable technology, and allows simple instructional material development without need for video editing or computer programming. To use it, the teacher selects a video recording, divides it into learning segments, orders the segments, selects a method of presentation for each segment, devises the appropriate interactive routine in which to embed each segment, and decides how to move from segment to segment. The method is being pilot tested by a network of experimental users, and enhancements are being considered. (MSE)

Descriptors—*Class Activities, *Classroom Communication, *Classroom Techniques, *Communicative Competence (Languages), Second Language Instruction, Speech Communication
The communication that occurs in a language classroom is real communication, because the interactions deal with ordinary, everyday matters. The substance of classroom management and the related exchanges between students and teacher, such as roll call and group exercises, provide many opportunities for language learning. Teachers can require students to learn classroom phrases and use them frequently. Teachers should use phrases repeatedly and use more of the target language than the students are able to use, monitor student language use and learn from it, use the language produced by the students, and, from the first class, convince students that foreign language use is essential. The students' native language can be used not only as a last resort, but also, when necessary, for clarity in discussing goals, when checking comprehension, to aid student memory, for test and other instructions, for explanation when necessary, for discussion of culture, especially at lower levels, and for teaching grammar. Descriptors—Communication Skills, *Language Teachers, Second Language Instruction, *Student Centered Curriculum, *Teacher Attitudes, *Teacher Role, *Teaching Skills
Recent emphasis on a more learner-centered approach to second language learning and teaching implies an enhanced and more demanding role for the teacher. Only a teacher can develop a learner-centered classroom. Recent developments in educational philosophy and linguistics have challenged many former assumptions about teacher roles and classroom practices with respect to teacher attitudes, knowledge, and skills. The teacher is no longer the dispenser of knowledge and distributor of sanctions and judgments, but a facilitator of learning, a resource, an adviser and co-participant in the learning process, who must necessarily re-examine the nature of his or her contribution to the learning process. The teacher must understand the nature of communication, of learning in general, of language learning in particular, and of the learner's own contribution to his or her development as a learner and communicator in the classroom where learning is both individually acquired and socially shared. Finally, the teacher needs a variety of specific skills to apply this knowledge to the learning experiences of the classroom, including a high degree of language knowledge; a critical, flexible, and experimental approach to teaching; an understanding of the interplay of process and product in language learning; and the ability to apply this awareness in classroom procedures and techniques. Identifiers—United Kingdom
A study of the effects of recent changes in the United Kingdom's school-exit tests in French language skills, primarily in the new emphasis on communicative competence, compared the perceptions of students in four classes preparing for the traditional test and four classes preparing for the new test. These groups were administered questionnaires asking about the helpfulness of a variety of typical classroom activities and how much time they perceived themselves spending on each activity. The classroom activities included listening, speaking, reading, and writing activities, and student-teacher and student-student interactions. It was found that, in general, students in the traditional-test group did more reading and writing, and students in the new-test group focused more on listening and speaking activities in class. The results suggest that teachers may be using the test format as the instructional method, a mistake made in language teaching in the past. Appended is a list of learning objectives related to listening, conversation, pronunciation, reading, writing, and ways of working.

Identifiers—Ireland
With recent developments in assessment and syllabus formats in Ireland, the foreign language classroom has changed considerably, especially in the promotion of oral skills at the upper levels. Differences are found in the variety of classroom activities, with the emphasis now on group activities, and in the organization of learning and student-teacher relationships, with learners functioning more freely, initiating and managing their own activities, resulting in an apparently reduced role for the teacher. The new practices are based on research into the acquisition of second languages that suggests the effectiveness of spontaneous, creative, conversation-like exchanges organized as structured, authentic tasks. Much task-based material for oral skills development has been produced. Materials appropriate for upper-level instruction include problem-solving and thinking games, interpersonal activities, role-plays and simulations, and interpretation activities using visual and sound stimuli. Instructional factors such as learner grouping, selection and grading of task types, the need to minimize "communicative stress," management of feedback, and the role of the teacher require attention. Ultimately, appropriate forms for evaluation of creative, spontaneous language use at the advanced level will have to be developed. (MSE)

Inclusion of oral exams as a regular part of the school-based testing program has the advantages of providing motivation to learn oral skills, oral testing experience, additional opportunities for students to perform well, and improved relationships with students. However, logistical problems can be substantial. Adequate time for and efficient timing of interviews are both necessary. Constructing a test that both provides for a reasonably normal conversation and allows the examiner to assign grades is difficult, but it can be aided by several techniques: isolating aspects of oral competence and testing them separately, scoring according to specific, predetermined level expectations, retrospective grading or use of separate grader and interlocutor, or peer interviews. Techniques such as role-playing can also be used to extend the scope of the exam. At the lower levels, the students' own teacher should be

the examiner, and at the upper levels, teachers should test each others' classes for the students to have the experience of different voices and approaches. (MSE)

Identifiers—Danish
An approach to the selection of second language reading material that is authentic but comprehensible at the lower levels begins by using materials with interesting content that are accessible to the student. The approach capitalizes on the students' prior knowledge, information resources, or supplementary information provided with the reading. It allows the students to react to the text in their own individual ways according to their own experiences and the knowledge they bring to the text. Such a technique is consonant with the communicative approach. It addresses the learner's own cognitive level and avoids providing them with bland, prepackaged language that does not promote real language skill development. The technique is illustrated with an article from a Danish newspaper. (MSE)

Identifiers—Rhyme
The ability to retain many songs in memory makes them an important tool for language learning, but one that is often underused. A commercially-produced set of materials called "Singlingual" puts everyday German words and phrases to well-known tunes, a technique students can use to develop their own songs. In addition to readily-available published language games, teachers can also use popular television games in class, such as guessing the missing word in a sentence; pairing students and having one from each pair leave the room, to return and guess a word chosen by the other; having teams of students choose ten letters from piles of vowels and consonants, and make as many words as possible from them; guessing occupations in the style of twenty questions; and choosing which of three definitions applies to a chosen word. Scoring variations can add interest to games, and teachers can also devise their own versions of Trivial Pursuit. A list of useful materials is appended, including songs, and albums in Spanish and French. (MSE)

Identifiers—*Content Area Teaching, Ireland
In Ireland, children learn Irish and perhaps another second language in school, but use English almost exclusively outside those classes. In addition, the classes most concerned with communication (i.e., language classes) are those the most empty of material about which to communicate. This experience with language learning may diminish students' perception of other languages as relevant. While it is commonly held among language teachers that they should associate language with situations outside the classroom, it is difficult to do this authentically. One way of turning language into an asset is to use the target language for classroom management, which provides a rich source of communication needs, but this effort can be lost in the hours between language classes. The isolation of the language class can be counteracted by introducing language lessons into other areas of the curriculum, linking language and subject matter. Studies of partial and full immersion courses show that performance in the target language is positively affected and achievement in the content areas does not suffer. If subject matter is covered both in the language course and in its own course, the subject matter and language learning are both reinforced. (MSE)

Literature is authentic language, written with unusual care, skill, and language awareness. It is useful for teaching culture and civilization, but equally useful for teaching basic elements of language: grammar, vocabulary, rhythms, and registers. Literary skills are also widely used in everyday situations, with sophisticated literary techniques used in such a pervasive medium as advertising. Exercises in grouping words or grammatical categories in literary works, as in a poem, are easily undertaken in the language class and can uncover hidden layers of meaning. Other techniques include removing words or the title or jumbling the order of a poem's lines and asking students to supply the missing parts. Stylistic variation can be examined by using different means of comparing the same thing or person, as in a newspaper article versus a poem. Teachers must consider what kinds of texts to use, the best type of exercise for the medium, the kinds of introductory or comparative materials to use, specific advantages of the genres, and the placement of literature in the language syllabus. Variation in quality and register is desirable in choosing literary texts for the classroom. (MSE)

Increased emphasis on the cultural dimension in second language instruction has appeared in recent years, as evidenced in the content of standardized school-leaving tests used in Great Britain. One purpose of the cultural element of instruction is to make real the language being learned, but another is to stress its potential usefulness. Some cultural topics to be covered include industry and economy, mass media, history, geography, government and politics, regions, cities, educational systems, food and drink, and sports. Some of this information may already be known by the students, making it a better basis for learning. For advanced classes, more involved cultural subjects can be used, such as dialects, theater and the arts, and folk tales and customs. As much of this instruction as possible should be done in the target language, and it can be introduced spontaneously or formally in the classroom. Projects and group work lead to seeking out information, which is also an important learning process. Literature, as part of the cultural dimension, should be included, but should be chosen carefully so that students can relate to it. (MSE)

Identifiers—*Grice (H P)
Pragmatics is the theory of utterance interpretation, as contrasted with sentence interpretation, involving a variety of tasks: disambiguation, reference assignment, resolution of vaguenesses or indeterminacies, restoration of missing or elliped material, and recovery of the speaker's attitude and the effects of stylistic variation. The most basic issue is to determine which of two distinct models of communication (encoding/decoding vs. the Grice theory of maintenance of communicative behavior standards) best fits the facts of verbal communication. A pragmatic theory based on the single principle of relevance of utterances and providing a method for comparing utterances' relevance could provide an alternative to the more elaborate Grice theory while preserving and strengthening his original idea. This theory proposes that relevance is the single property that human beings seek in the propositional information they process, whatever its source, and that information regarded as irrelevant or not relevant enough will simply be ignored. The principle questions some accepted ideas about the source of pragmatic variation; instead, it finds variation in contextual assumptions and implications, the accessibility of the assumptions, and the amount of processing effort the hearer is prepared to spend. Identifiers—*Trinity College (Ireland)
A self-instructional program in German for undergraduate students of engineering at Trinity College, Dublin, was developed based on a questionnaire of student needs, language experience, and preferred instructional methods. The course design and instructional materials for the program emphasized oral/aural skills; moreover, counseling and academic advising were provided. Small-group interviews were conducted both at the beginning of and during the instructional program to assess student needs and attitudes about their instruction. Academic assessment was provided at two levels, beginning and intermediate, at the students' option, and consisted of oral and written components. Nine students completed the first pro-

gram cycle and performed adequately or better on the final test. The independent study aspect of the program was found to respond adequately to the individual needs, levels, and learning styles of the students. It was also found that the counseling structure should cover a wide range of therapeutic and pedagogic functions, even in a very small group, but that some students function and achieve well with little or no support. The acquisition of Irish as a second language in a four-year-old child of bilingual parents attending an Irish-language preschool group in Ireland is chronicled, with emphasis on the characteristic features of her language learning process and the factors determining which language she uses with others. The study was based on transcribed adult-child conversations with a high proportion of question-answer interactions. The distinctive features discussed in detail include the use of the Irish vocative, colors and numbers, use of prepositions and constructions in which the subject is expressed by means of a preposition, sentence complexity, transfer of discourse skills, participation in conversation, and the productive use of questions as a learning strategy. Identifiers—Michigan Technological University
Michigan Technological University has introduced a program which awards a certificate in Foreign Language and Area Study to students completing two years of the same foreign language and three area studies courses. It was developed in response to the necessity of dropping 19 foreign language courses. A survey of freshman English students revealed that most were unaware of the advanced placement program, and analysis of division requirements found that it was difficult for students to elect a three-term sequence of courses. A survey of corporate employers in Michigan provided support for the opinion that foreign language skills are beneficial in careers, and the placement office provided copies of job descriptions requiring foreign language fluency. Facts about the role of the International Division of the Michigan Department of Commerce were gathered. A university program development committee benefitted from the publicity given to the President's Commission on Foreign Languages and International Studies when it presented its report to the school's administration. The encouraging response from students and faculty led to implementation of some recommendations, including planning of schedules to allow students in all disciplines to take foreign languages. Despite some administrative barriers, the program awarded its first certificates in May 1984, and enrollments are expected to increase. (MSE)

Identifiers—*National Science Foundation
Needs of collegiate mathematics across the nation are considered, and suggestions are offered to the National Science Foundation (NSF) by a professor of Mathematics at St. Olaf College (Minnesota). Changes in mathematics content, scope, and applications have implications for the college curriculum. Problems and challenges are posed by: increased enrollments in elementary courses and decreasing numbers of mathematics majors; inadequate access by faculty to computing resources; and providing mathematical courses appropriate for liberal education. The curriculum is largely elementary and out of date at most two- and four-year colleges, excluding research universities and selective liberal arts colleges. While there is a shortage of math teachers, industrial demand for mathematics graduates is high. Faculty involvement in scholarship and professional development, not only traditional research, is important to revitalizing collegiate mathematics. Recommendations include: providing a competitive system of NSF Faculty Fellowships in areas such as curriculum development, student projects, and research support; providing each mathematics faculty a high-powered computer work station; utilizing the expertise and outreach of existing professional organizations to increase leverage of limited NSF resources; and making sure that NSF staff are selected to provide balanced, informed advice. Perspectives on good teaching at the college level are offered. Some evidence exists that students' retention of lecture material is poor. One promising approach is the Personalized System of Instruction, which emphasizes student involvement, high expectations, and assessment and feedback. Some faculty members now focus on recall and comprehension and do not require students to develop skills in analysis, synthesis, and evaluation. A problem exists when colleges whose mission is primarily teaching and student development turn to faculty publishing as the route to academic distinction. Good teaching is the first ingredient of quality education, and colleges need to find ways to encourage and reward good teaching. Research on student evaluations of teacher performance consistently indicates that: there is general agreement among students and faculty on the effectiveness of teachers; judgments by students about teachers persist and are replicated years after they graduate; and students' ratings positively correlate with the amount of student learning. It is proposed that research on teaching and learning be done by classroom teachers (classroom researchers), especially at teaching institutions. Advantages of this proposal are discussed, and external factors that have focused attention on the quality of instruction are also identified. (SW)

Perspectives on connections between corporations, the military, and colleges are provided, with attention to whether corporate and government control is exerted over education. According to James Ridgeway's "The Closed Corporation," colleges are central to business/industrial and government/military activity. His examples include: government and corporate funding for research, university investments of endowment funds, research institutes in support of corporate and government objectives, university and corporate business association for profit, and university officials and faculty on corporate boards and consulting for business and government. Also considered are three ideological orientations: the dominant, accommodationist, and radical. The dominant ideology supporting corporations includes a belief in materialism, consumerism, weak industry regulation, and restraint on taxes for business and the rich. The accommodationist ideology perceives deficiencies in this corporate system but accepts its basic structure and values as inevitable, while the radical ideology criticizes economic evils in the system. A brief overview of the entire system of control is provided to indicate the quality of corporate and government control over education. A 24-item bibliography is included. (SW)

Identifiers—*Student School Fit
A guide to help disabled students organize the search and decision-making process in selecting a college is presented. Students are encouraged not to allow their disability to become the major influence in their lives. Students are helped to probe their academic preparation as well as their academic and career interests/goals. Six questions are posed to help students evaluate how independent they are. Additional questions address: the size school that would feel comfortable, financial limitations, and entrance requirements. In considering specific support services provided by the college, attention is directed to questions that might be posed by students who use wheelchairs, as well as by students with hearing impairments, visual impairments, learning disabilities, or health problems. Students are also advised to ask questions about accommodations necessary for their participation in extracurricular activities. Investigating scholarship and financial support opportunities is also covered. Finally, the process by which students can evaluate the final list of possible colleges is addressed. Five questions to ask about each college are identified. (SW)

Results of the University New Student Census and the Mini Census completed by 1,984 freshmen entering the University of Maryland, College Park (UMCP), are presented. The sex distribution of incoming freshmen was 51% male and 49% female. The majority of the sample was White (81%), while 9% were Black, 8% Asian, and 1% Hispanic. Thirty-seven percent of the students believed that the most important educational objective was learning skills directly applicable to their career goals. Nineteen percent of students reported that their most important educational objective was to learn as much as they could about several fields of study. Thirteen percent reported that deciding on a career goal was most important. Twenty-six percent strongly agreed that they expect to have a hard time adjusting to their academic work, while 36% were neutral on this item. In discussing their main reason for deciding to attend UMCP, 34% reported that UMCP offered the kind of academic program they wanted; 24% reported that they wanted to be close to home, and 14% reported that they wanted to attend an inexpensive university. Also investigated were: activities that interested students, career interests, study habits, library use, interest in educational/vocational counseling, and social/political attitudes. (Author/SW)

Interim programs at nine colleges are described. An introductory essay by Lee M. Swan, "The Interim: Potential for Quality Learning," emphasizes the potential for unique learning through the interim approach. At Augustana College (South Dakota), interim experiences are required, including core courses, internships, travel experiences, and programs on a chosen theme. Buena Vista College (Iowa) also requires freshmen to attend a humanities interim course emphasizing writing, speaking, and critical thinking skills in the context of Western classics. Colby College's (Maine) January Program has involved students in both directed research and independent study. A cluster course concept followed at Illinois Wesleyan University only requires two or three faculty members willing to work together around a common concept. Winter Term at Linfield College (Oregon) includes regular and special courses, internships, and practicums. McMurry College (Texas) offers nontraditional courses during the summer on a voluntary basis. The interim at Pacific Lutheran University (Washington) is devoted to intense study of one topic and may involve a journal, case study, or oral presentation. At Rollins College (Florida), completion of three Winter Terms is required for graduation. Finally, Samford University's (Alabama) January Term, which focuses on the liberal arts approach to professional education, enrolls law students and business majors as well as arts and sciences majors and has included trips to study foreign countries. Identifiers—*Student School Fit

Student academic performance, racial attitudes, and college satisfaction were examined with a national sample of black students attending selected predominantly white and historically black, state-supported universities. The effect of student background, campus experiences, and personality orientation was investigated. Specific variables included: socioeconomic status, high school grade point average (GPA), involvement in and adjustment to campus life, academic competitiveness of the college, race relations on the campus, self-concept, and occupational aspirations. Data were obtained for 1,583 students from the 1981 (response rate: 27%) and 1983 (response rate: 35%) versions of the National Study of Black College Students (housed at the University of Michigan, Ann Arbor). Grades were significantly higher for males and students on black campuses, and students with higher grades reported greater satisfaction with and involvement in college life. High school GPA was the strongest predictor of college grades for all subgroups except black females on white campuses. Discrimination was reported by black students at white campuses. Evidence suggests that college grades will be highest where students are happier and more satisfied with college life. Ten recommendations are offered, including precollege enrichment programs, better college-school coordination, and coaching for standardized tests. Five pages of references and statistical tables are appended. (SW)

Identifiers—*Arkansas

Data on full-time equivalent (FTE) enrollment, student semester credit hour (SSCH) production trends, and nontraditional instruction are presented for Arkansas colleges and universities. FTE enrollment is reported for each two- and four-year state institution, including trends for 1973-1983. Data are reported on SSCH production program area and four levels of study, 1978-1983, and separately for the education field and for six occupational fields. For both state-supported and private two- and four-year institutions, data are provided on 1982-1983 SSCH for nontraditional activities (i.e., auditing classes, high school/college cooperative enrollment, instruction through various alternative media/modes, credit-awarding activities, and off-campus enrollment). In reporting SSCH production, the Classification of Instructional Programs has been used since 1982-1983. Findings include: FTE enrollment rose to 55,183 during 1982-1983; two-year institutions' FTE enrollment was up 6.2% over the previous year, compared to an increase of 1.4% for the four-year schools; undergraduate SSCH was up 22.9% over the 5-year period since 1978-1979, while graduate SSCH production was down 8.9% over the same period. Identifiers—*Arkansas

Data on degrees conferred in 1983-1984 by the 32 higher education institutions in Arkansas are presented, along with a narrative description of trends. The data include second-summer, fall, spring, and first-summer terms. Total degrees granted in 1983-1984 fell by 2% from the previous year. At state-supported institutions, degrees granted as a whole dropped 3.7%, while the private institutions showed a considerable increase of 8.4%. The number of baccalaureate degrees conferred by Arkansas institutions rose by 2%; the associate-degree count declined by slightly over 12%, and the number of masters and first-professional degrees continued to decline. The number of educational certificates and doctoral degrees remained relatively steady. Tables include an institutional listing of certificates and degrees conferred at the associate, bachelors, masters, and doctoral levels; degrees granted by level and discipline; degrees by level and sector; and degrees for the specific state and private institutions. The tables also provide a cross reference for the four groups of institutions (state four-year, state two-year, private four-year, and private two-year). Included are trend data on degrees for 1979-1980 through 1983-1984. (SW)

Identifiers—*Arkansas

Data on degrees conferred in 1982-1983 by the 31 higher education institutions in Arkansas are presented, along with a narrative description of trends. The data include second-summer, fall, spring, and first-summer terms. Degree production for 1982-1983 was 3.1% higher than 1981-1982. Most of the increase resulted from increases in associate degree production at state institutions. Forty-two percent of the certificate and associate degrees granted by Arkansas institutions were liberal/general studies degrees. Two fields of study dominate the baccalaureate area: the education and business fields each accounted for 24% of the baccalaureate degrees conferred by the 19 four-year Arkansas colleges and universities. Education was the dominant field at the masters degree level. Tables include an institutional listing of certificates and degrees conferred at the associate, bachelors, masters, and doctoral levels; degrees granted by level and discipline; degrees by level and sector; and degrees for the specific state and private institutions. The tables also provide a cross reference for the four groups of institutions (state four-year, state two-year, private four-year, and private two-year). Included are trend data on degrees for 1978-1979 through 1982-1983. (SW)

Actions taken on higher education by the 1985 Arkansas General Assembly and the First Extraordinary Session are summarized. Successful and unsuccessful legislation are identified, and the appropriation and funding process for each institution is shown in chart form. The general revenue appropriations for higher education for the 1985-1987 biennium are also summarized. The following tables are included: institutional requests and State Board of Higher Education recommendations, legislative appropriations, allocations in the Revenue Stabilization Act, 1985-86 funding estimates, and allocations of the promotion grants fund. Historical trends for higher education funding compared to state support of other agencies are also covered, along with actual general revenue distributed to public higher education for the last three biennia. Maximum authorized salary levels for selected key college positions are also listed. State recommendations for general improvement fund

projects (e.g., maintenance, libraries, and instructional equipment) are also considered, along with the resulting Revenue Stabilization Act. Legislation and resolutions adopted in 1985 are listed and briefly described, and specific actions taken by the state senate and house on each bill are documented. (SW)

Identifiers—*Arkansas

Information on the geographic and institutional origins of students at 32 Arkansas state and private colleges and universities in the fall 1980 is presented in tabular, geographic, and narrative form. Although the number of full-time, entering students from both Arkansas and out-of-state has declined, their proportions have remained relatively constant: 84% in-state and 14% out-of-state (excluding U.S. territories and foreign countries). A total of 57,677 in-state undergraduates registered at Arkansas institutions during fall 1984, down 820 from fall 1983. Undergraduates from other states decreased by 2.7%. Arkansas college students relocated among the various institutions less in 1984 than in the previous fall semester: 3,713 compared to 3,973. More students transferred into Arkansas institutions from institutions out-of-state during fall 1984 than fall 1983. The number of graduate students in Arkansas universities rose considerably over fall 1983. The 12% rise is a direct result of public school teachers returning to campuses to fulfill requirements of the Teacher Testing Law. First-professional enrollment dropped 1.9%. Arkansas counties with large populations and those containing public institutions have the highest participation rates. (SW)

Information on the geographic and institutional origins of students at Arkansas state and private colleges and universities in fall 1984 is presented in tabular, geographic, and narrative form. Entering students numbered 13,072 in fall 1983, a 3.32% decline from the fall 1982 figure of 13,521. The college-bound rate of Arkansas high school graduates increased from 38.2% in 1982 to 39.3% in fall 1983. A total of 6,131 undergraduates transferred from both in-state or out-of-state institutions to Arkansas colleges. Arkansas residents comprised 86.5% of fall 1983 undergraduates. Although the total number of foreign students did not change significantly from fall 1982, the state four-year institutions showed a slight numerical increase (1,004 in 1983 and 977 in 1982) in undergraduate foreign students. A significant number of students enrolled as graduate students at the institution from which they received their baccalaureate degrees. For each college and university, information is provided on the geographic origin of undergraduate students (county and state). In addition, for each college and university, ratios of fall full-time, entering undergraduates to high school graduates are presented by county. (SW)

Identifiers—*Arkansas

Fall 1983 on-campus enrollment data in Arkansas colleges and universities are presented, along with a narrative description of trends. Statistical tables cover the following areas: fall on-campus headcount by student level and type of institutions, 1974-1983; number and distribution of fall full- and part-time on-campus headcount students, 1980-1983; fall on-campus headcount of first-time enrollees; legal residence of students at state-supported and private institutions, and sex and median age of students. Enrollment at state two-year institutions increased to 12,767, or 17.39% of the total enrollment. State four-year enrollment was up in all but two institutions. The college-going rate increased during 1983, although the number of first-time entering students decreased because of declines in high school graduates. Full-time enrollment declined by 409 students, while part-time enrollment increased by 1,114. Twenty-three of the 32 institutions increased in part-time enrollment. The average load per student remained stable at 15 hours for full-time undergraduates and 5 hours for part-timers; and 11 and 4 hours for full-time and part-time graduate students, respectively. Over 90% of students in Arkansas state-supported institutions list Arkansas as their legal residence. (SW)

The origin and establishment of three innovative graduate institutions in the Boston, Massachusetts, area were assessed: The Arthur D. Little Management Education Institute, The Massachusetts General Hospital Institute of Health Professions, and the Wang Institute of Graduate Studies. These institutions started in non-educational institutions and were chartered as professional master's degree-granting institutions. Historical case studies supported by a participatory research design were used to determine how these institutions fit into the evolution of American professional graduate education, and specifically into the integration of theory and practice. Over 100 interviews covered institutional history, current status and future prospects, and the staff/student's relationship with the institution. Institutional contacts and documents were also consulted. Linkages common to these institutions included resources from the parent organization, the organizational connection to both parent organizations and respective industries; and linkage with their marketplace. The three institutions are compared concerning integration of theory and practice, as well as balancing demands toward industry (e.g., advancing technology) versus demands toward traditional university-based graduate education (e.g., accreditation). Identifiers—*ASHE Annual Meeting, *Strategic Planning

Strategic planning initiated by the recently created State System of Higher Education (SSHE) in Pennsylvania is examined. Components of the strategic approach found in the literature and dimensions generally considered critical for both strategic formulation and strategic understanding are considered. Attention is directed to the multicampus system as an organizational type and its past planning practices, and the specific historical and political context of the SSHE. Field observations from six days of planning from January through April 1984 are summarized, along with key events that followed. The plan, consisting of eight strategic direction statements, is also described. Of significance during the planning process were the interactions of the Board of Governors and the Strategic Planning Committee with the planning consultant and with other actors from the Central System Office. The committee included representatives from key stakeholding areas. The eight strategic direction statements provide a framework for the campuses and identity for the system. Since the completion of the first planning stage, a number of critical realignments have occurred within the system. (Author/SW)

Identifiers—*ASHE Annual Meeting, Objective Analysis, Quantitative Research, Subjective Evaluation

Approaches to studying enrollment decline are compared and limitations and advantages associated with each method in predicting response to decline are assessed. The literature is reviewed to identify research perspectives on decline. Variables consistent with each perspective are identified and measured on a sample of 56 small- to medium-sized

colleges and universities that experienced decline. Path analysis (LISREL V.) was used to compare perspectives and predictor variables. The literature indicated two major perspectives concerning organizational elements: (1) they are objective and measurable or (2) they are subjective, contextual, and knowable via interpretation. An initial assumption was that both the objective and interpretive approaches to studying decline are useful in describing organizational responses to decline. While the interpretive approach was superior to the objective measure for predicting responses to decline, both perspectives were important to understanding responses. It is suggested that the way organizational members perceive decline is important, along with the level of agreement on institutional mission, and managers' interpretations of external events to staff. A four-page list of references concludes the report. (SW)

Identifiers—*ASHE Annual Meeting, High School and Beyond (NCES), Middle Income Student Assistance Act, National Longitudinal Study High School Class 1972, Vietnam War

Changes in high school graduates' college choices between 1972 and 1980 were investigated, with attention to the importance of different enrollment influences and the distribution of these influences. Analysis of the National Longitudinal Study (NLS) of the High School Class of 1972 and the High School and Beyond (HSB) surveys revealed that 46.4% of the NLS subsample attended two- or four-year colleges in the fall of 1973, compared to 46.0% of the HSB subsample. The data suggest that high school seniors decided whether to enter college in 1980 much as they had in 1972, which means that the Middle Income Student Assistance Act and the end of U.S. involvement in Vietnam had no substantial effect on students' decisions. The effect on college attendance of the following high school graduate attributes were assessed: race (Black/Hispanic), sex, geographic region, local cost in 1980 dollars, parents' education, family income in 1980 dollars, test scores, grades, academic programs, college-going peers, and receipt of financial aid. The strongest zero-order correlates of college entry in both 1972 and 1980 were academic track placement, test score, college-going peers, and grades. Bivariate regression coefficients corresponding to the correlations were also determined. (SW)

Identifiers—*ASHE Annual Meeting, Mechanic (D)

Mechanic's (1962) conceptual model of power of lower participants was empirically tested, with a focus on the relationship between chairpersons and departmental secretaries of academic units. Power was defined as the ability of a person to have access to and control over information and individuals. A questionnaire was developed that covered the following factors: expert knowledge of lower participants, effort and interest in attaining complex work skills, dependency of superordinates on subordinates to do routine and nonroutine tasks, and control over access to persons, information, and instrumental equipment. Questionnaires completed by 50 chairpersons and 50 departmental secretaries at a major public research institution resulted in 94 usable responses. The results partially support Mechanic's model. The longer on the job, the more control the secretary had over access to persons, information, and instrumentalities. Expert knowledge and perceived power were also linked. It is recommended that a combination of quantitative and qualitative methods be used to better understand these power relationships. Questionnaire development, achievement of construct and content validity, and test reliability are briefly described. (SW)

Identifiers—*ASHE Annual Meeting, Ethnomethodology, Symbolic Interactionism

Mexican American college students' views about the context influencing their decision to persist or leave the university were studied. Two sociologies of everyday life, symbolic interactionism and ethnomethodology, guided the inquiry. Perceptions of college-going behavior before and during the freshman year were obtained from 18 students and former students. Interviews were conducted 8 to 11 months following the freshman year. Students thought over their lives and recounted experiences related to their own and others' college-going behavior. For each experience, students described ways that others were involved in the experience, as well as their own perceptions. One type of college-going behavior of the Mexican American students was distinguished as pre-matriculation or "getting ready" and included: initial expectation engendering, fraternal modeling, mentor modeling, indirect simulation, and direct simulation. A second type of college-going behavior, post-matriculation or "getting in" behaviors/attitudes, encompassed perceptions of the college: mass, distance, and complexity of the physical surroundings and social and academic environment. Conclusions are offered concerning the effects on persistence of background variables, anticipatory socialization, social integration, and cognitive maps. Four pages of references conclude the report. (SW)

Features of the matrix model of the research university and myths about the academic enterprise are described, along with serious dissonances in the U.S. university system. The linear model, from which the matrix model evolved, describes the university's structure, perceived mission, and organizational behavior. A matrix model portrays in concise, visual terms key features of the organization and mission of the comprehensive research university and its interdependent relationships with other universities and external agencies. An organizational map highlights the orthogonal roles of administrative and intellectual leaders, the negative consequences of preoccupation with institutional rankings, and the inadequacies of organizational structures for relating the basic research mission to the undergraduate instruction and public service missions. The "theory" of the university, often embedded in an outmoded mythology, also contributes to serious dissonances in the academic enterprise. The structure and theory must both be reconsidered in efforts to reconceive the role of the major research universities in the postindustrial society. (Author/SW)

Identifiers—*ASHE Annual Meeting, Cornell University NY, *Vassar College NY

The efforts of Vassar College and Cornell University in their early years (1865-1890) to manage problems presented by underprepared students are described. Based on archival materials, registers, institutional publications, and histories, attention is directed to the perceptions of administrators, faculty, students, and alumni concerning academic inadequacy. The way each institution tried to create and project its public image is considered, along with the internal discourse of each institution in relation to academic quality. In addition to reviewing perceptions of institutional image, the rhetoric and reality of academic excellence involved in institutional image building are addressed. For example, the images set forth in catalogs as well as the policies enacted by faculty and administrators are described. Also considered are institutional strategies developed to manage the institution's image by controlling academic deficiencies among students and by limiting instruction in subcollegiate areas. While Vassar reorganized its curriculum and provided needed preparatory studies, Cornell did not offer preparatory studies but dealt with academically deficient students on a case by case basis. Both colleges expanded educational opportunities to a broader base of students than had previously been served. (SW)

Characteristics, *Student Evaluation, Testing, *Undergraduate Students
Identifiers—*ASHE Annual Meeting, Kansas, *Nelson Denny Reading Tests, Preprofessional Skills Tests
Scholastic and personal characteristics of students undertaking exit competency examinations are investigated. Research questions concerned: what the tests measure, whether the tests provide unique information or are duplicating other easily obtained measures, whether it is possible to increase the probability of student success by controlling early higher educational experiences, and whether a workable definition of competency can be inferred. Analysis was undertaken for 1,195 Kansas public university undergraduates who took the Pre-Professional Skills Tests in Math and English and the Nelson-Denny Reading Achievement Test. Information from transcripts was obtained on American College Testing Program scores, general education enrollment patterns, student classification, grade point average, and major. Based on multiple regression analysis, it was found that competency as defined by tests is a pure function of scholastic ability only at the extremes of the distribution, with personal factors manifesting increased importance in the definition of competency for the majority of the students involved. Included are suggested actions that can be taken by faculty, student service providers, and administrators in dealing with public demands for quality assurance. (SW)

Identifiers—*Advanced Institutional Development Program, *ASHE Annual Meeting, Institutional Vitality, Tuskegee Institute AL
Changes in institutional viability were studied for Tuskegee Institute and six black land grant institutions that had received grants between 1974-1977 from the federal Advanced Institutional Development Program (AIDP). The study instrument consisted of 59 financial and nonfinancial indicators, most of which were developed by Kevin J. Gilmartin. To determine the impact of the AIDP grant on the indicators, administrators responding to the survey assessed the institution for the year that the institution's grant began and changes occurring by the year after the grant ended. The AIDP grant had a moderate impact on changes in institutional viability for each of the seven institutions. As perceived by the administrators, curriculum improvement activities had the most impact on measures of institutional viability, followed by administrative improvement. Four of the institutions reported an increase in: government appropriations per full-time equivalent student, tuition and fees per student, full-time equivalent enrollment, and number of faculty. Five of the institutions reported an increased in instructional expenditures per full-time equivalent student, while six institutions reported an increase in total current fund expenditure per full-time equivalent student. Identifiers—*ASHE Annual Meeting, National Longitudinal Study High School Class 1972, Status Attainment Theory, Tinto Theory
College student persistence and overall educational attainment were studied, based on data from the National Longitudinal Study of the High School Class of 1972. Attention was directed to the influence of student socioeconomic status, academic aptitude and preparation, educational goal commitment, college quality/selectivity, college orientation to academic/graduate education versus vocational sub-bachelor's degrees, college size and complexity, and average student involvement. The analysis is based on a causal model derived from the sociological status attainment and conflict paradigms and from Tinto's model of college persistence/withdrawal. Statistical analysis involved Joreskog and Sorbom's technique for maximum likelihood estimation of models with multiple indicators of latent constructs: LISREL (linear structural relationships). Analyses were conducted separately for males and females who entered college in academic programs in fall 1972. Results show significant effects of students' social and academic background, institutional characteristics, integration and performance in college, and goal commitment after college entrance. Findings indicate the importance of examining dimensions of institutions other than the commonly used selectivity or quality dimension. (Author/SW)

Identifiers—*ASHE Annual Meeting
The support of teaching in the liberal arts is examined using data from a random sample of chief liberal arts academic officers of American colleges and universities. Information is presented on 15 categories of faculty support for teaching and research, basic teaching conditions, tenure decisions, and merit salary increases. Differences in support among institutions that vary in size, location, sponsorship, and degree level are identified. The liberal arts are defined as the natural sciences, social sciences, and humanities. Of 738 questionnaires, 371 usable responses were received. Characteristics of the responding colleges include: 17% offer doctorates, 44% offer master's and bachelor's degrees, 39% are undergraduate colleges, 25% are church-related, 41% are private, and 34% are public. More than half of the respondents rated the availability of funds as good or excellent for just 6 of the 15 categories of support: library books, graduate courses, library journals, computer purchases, and sabbaticals for knowledge acquisition and research. These findings indicate that liberal arts teaching is in less than excellent health on most campuses. In addition, numerous inconsistencies were found among resources, standards, and rewards in institutions of higher learning. (Author/SW)

Identifiers—*Loan Default, *New York
The characteristics of student loan borrowers and differences between those who repay their loans and those who default are examined. Data are based on the New York State Higher Education Services Corporation Guaranteed Student Loan database and responses to a questionnaire mailed in spring 1984 to a sample of New York State student loan borrowers. The study population consists of 175,204 borrowers who graduated or left school during fiscal year 1982 and who were due to enter repayment in 1983. Six percent of the sample were in repayment and 11 percent in default. Findings include: there was a strong relationship between default and the number of years spent in school; there was a strong inverse relationship between default and the level of school attended; the graduation rate for repayers was only slightly higher than for defaulters; borrowers who were employed when their loans became due were more likely to begin repayment; students who worked while in school were more likely to repay than nonworking students; repayers were three times as likely to receive family assistance in repaying loans. Eight recommendations are offered, including: extending deferments during periods of unemployment; discouraging students from excessive borrowing; and graduated repayment plans. The survey letter and questionnaire are appended. (SW)

Identifiers—*ASHE Annual Meeting, *Women Administrators
Gender differences among mid-level administrators in higher education is considered, based on a review of research. Attention is directed to research in three areas: (1) socialization of women and men to work and career patterns, (2) characteristics of higher education administrators, and (3) characteristics of the institutional climate and its effect on gender. Methodological issues and suggestions for future research are also addressed. Specific research concerns include: achievement motivation issues; leadership as an expression of achievement; factors that affect the socialization of women to work in high levels of the professions; number of women in higher education administration, where they are located, and what kinds of positions; demographic factors; perceptions and evaluations of their work; skills of mid-level managers; problems and issues; cultural spheres affecting academic life and the use of historical analysis to understand the power that brought about changes; an institution's internal personnel procedures for equity, selection, hiring, stereotyping, and mentoring; and how an institution deals with problems, issues, and changes. Methodological issues include: subjects, measures, kinds of comparisons, settings, demographic factors, and interaction between the role of culture and institution. Six pages of references conclude the report. (SW)

Identifiers—*ASHE Annual Meeting, Collegiality
The effect of participation in interdisciplinary general education programs on personal and professional development of faculty was investigated at Denison University (Ohio), Earlham College (Indiana), and Kenyon College (Ohio). Faculty members teaching interdisciplinary general education courses in these private liberal arts colleges were compared with matched nonparticipants at the colleges on such dimensions as professional goals/objectives, career development/satisfaction, and sources of reward. Personal interviews were conducted with a schedule constructed on the basis of adult and life stage theory. While there were more similarities than differences between the two groups, participants reported increased vitality, higher intellectual stimulation, increased respect for other disciplines, and taking on new teaching techniques. Specifically teaching in the program resulted in: a greater sense of collegiality resulting from involvement with faculty in their own and other disciplines; teaching outside one's field resulted in a return to the role of co-learner and a model for students; discussion type teaching strategies were enhanced since the interdisciplinary courses emphasized writing and reading skills; and course development in interdisciplinary and other special interest areas was expanded. Implications for practice and theory are discussed. (SW)

Identifiers—*ASHE Annual Meeting, Biglan Model
A new typology for faculty is proposed, based on their expressed priorities toward activities in which research universities engage. Responses of 617 faculty to a survey of 66 statements about university activities were factor analyzed, and scores on eight factors obtained were used in a cluster analysis that produced three clusters of faculty. When coded into disciplinary groupings, the faculty clustered along lines defined by their political description and gender. Items included in the following eight factors and their loadings are identified: (1) concerns about minorities and women; (2) liberal arts, liberal education; (3) nontraditional education; (4) intercollegiate athletics; (5) concerns about quality and research; (6) health care and training; (7) professional education; and (8) concerns about student health. The primary strength of this approach involves the effort to relate faculty groupings to institutional priorities as well as the assumption of heterogeneity rather than homogeneity among faculty members belonging to a specific department. The results are compared to Biglan's (1973) typology; some correspondence is found with his "hard-soft" axis, or applied-pure and life-non-life dimensions, which were used to classify departments. Identifiers—*ASHE Annual Meeting
The relationship between the structure of decision-making in a college or university and the consensus on values within the university was studied, based on the field of organization theory where cultures and values are helpful in understanding the operations of an organization. Based on a larger study of the academic profession, a qualitative review of faculty interview responses and background documents was undertaken. Of 16 institutions in the larger study, eight are collapsed into three composite colleges. One of the composites consists of three institutions that offer master's degrees but few, if any, doctorates. Another composite consists of three leading research universities, and the third is a blend of two highly selective, undergraduate liberal arts colleges. The three clusters contain colleges that have similar decision-making processes, organizational structures, and consensus on faculty values. Attention was directed to issues such as: institutional mission, sense of community on campus, faculty responsibilities, unionization, centralization/decentralization of decision-making, and the power structure. The patterns can be used for faculty development and institutional assessment; a college can assess how its decision-making process is a function of faculty value consensus. (SW)

Identifiers—*ASHE Annual Meeting
Patterns of corporate voluntary gift and tax support to colleges and universities are examined for 1965-1984, based on data from the Council for Financial Aid to Education. Growth in corporate gifts are compared with changes occurring simultaneously in tax-generated corporate support. Also considered are differences in corporate funding patterns between public and private institutions, growth of corporate gift support to public institutions, and changes in the share of corporate funding that goes to higher education indirectly through state and local government funding. Policy implications related to the rise of corporate support to higher education are also addressed. Findings indicate that corporate gifts are growing at a quicker pace than either corporate tax of foundation gift support. At the same time, taxes still make up the largest share (about 89%) of total corporate support. Of the total $4.7 billion in voluntary gift support to colleges and universities in 1983-1984, $1.1 billion, or 22.7%, was corporate giving. In 1983-1984, corporate gifts surpassed foundation gifts for the first time. Data are provided on: voluntary support as a percentage of institutional expenditures, 1965-1984; corporate and foundation voluntary support per headcount student; and corporate support per full-time equivalent student. A reference guide to residency requirements for colleges and universities is presented. Six types of state governance patterns concerning residency are identified, along with the states that follow each pattern. Circumstances and conditions that may affect residency classification for tuition purposes (excluding alienage, marital status, or military qualifications) are specified, and the number of states that list each consideration is indicated. Information is also provided on: marital status as a basis for classification as a resident; classification of non-U.S. citizens as residents; and residency classification and tuition benefits for military personnel, their spouses, and dependent children. Also covered are circumstances affecting tuition benefits for: American Indians, public employees, scholarship recipients, individuals when parent/spouse/student comes to state for employment, students subject to loss of residency due to divorce, the visual and hearing impaired, graduates of state high schools, senior adults, and students with skill in specified areas. Information is also provided on tuition benefits based on financial need, establishment of residency for emancipated minors, and retention of resident tuition status for minors whose parents leave the state. Characteristics and job expectations of students taking courses in the field of higher education were investigated, along with student perceptions of their programs. Findings may be helpful in making curricula responsive to student expectations and in developing marketing/recruitment strategies. Eleven questions that relate to client identification for marketing programs in the field of higher education framed the development of the survey form. The survey examined the background of students in the areas of: education, demographics, occupation, perceptions of their programs, and career goals. Responses were received from 18 higher education doctoral programs. Information was obtained on: enrollment in higher education administration programs by sex and race (Caucasian or minority); undergraduate majors of students; grade point average for bachelor's and master's degrees, scores for Graduate Record Exam and Miller Analogy Test; occupational background; concentration (higher education administration, student personnel work, other); geographic accessibility to the program; fi-

nancing of studies, ways that students learned about the program; skills students want to develop; strengths/weaknesses of the program; and ultimate career goal (faculty, administrator, president, other). The findings are compared to two previous studies. (SW)

Identifiers—*ASHE Annual Meeting, Chief Academic Officers
Career lines leading to top-level administrative positions in two-year colleges were identified, based on data for 193 presidents, 271 chief academic officers, 221 chief student affairs officers, and 207 chief business officers. The analysis was based on internal labor market theory, and data were obtained from a 1984 national study of two-year college administrators' careers. Using a categorization scheme for possible position titles, curriculum vitae of respondents in each administrative position were analyzed to determine the types of positions that were held prior to the current positions. Except for presidents, the administrators came from various types of positions. Two-year college presidents largely came from top executive positions or chief academic officer positions. Positions that appeared frequently in the careers of chief student affairs officers were directors of counseling and financial aid, associate/assistant chief student affairs, and counselors. Chief business officers came most often from outside sources (business and industry and school administration). Comparisons to previous research are made. Also considered are implications of career lines for individuals and two-year colleges as well as for theory and research on careers in higher education. (SW)

Identifiers—*ASHE Annual Meeting
Occupational mobility for top-level, two-year college administrators was determined, with attention to movement between different types of postsecondary institutions as well as hiring from outside academia. The focuses on college presidents, chief academic officers, chief student affairs officers, and chief business officers. Findings are interpreted within the context of internal labor market theory, which offers a framework for explaining administrator mobility. Data were obtained from a 1984 national study of two-year college administrators' careers. Results indicate that the labor markets for presidents, chief academic officers, and chief student affairs officers were relatively closed to individuals from external positions and from four-year institutions. These boundaries were more open at earlier stages of careers. The position of chief business officer, however, was much more open to administrators from external sources. It appears that one way in which two-year colleges protect their employees, and perhaps induce organizational commitment, is by holding out top-level positions for those from within the two-year college labor market. Boundaries of an administrative labor market can have important implications for individuals, the two-year college, and for postsecondary education. (SW)

Identifiers—*ASHE Annual Meeting
The trend toward greater state regulation of public higher education is discussed, along with alternative structures or models for state financing of public institutions. The situation in Washington State is briefly described as an illustration. It is proposed that interests of the state, college, and student can be enhanced by allowing colleges more operational independence. At the same time, the state's financial liability can be controlled by refocusing the budgetary decisions to the amount of state tax funds to be provided and eliminating or minimizing the effect of local decisions on the level of investment of public resources. The four alternative models for state financing range from a high degree of state control and little institutional flexibility to one of maximum institutional flexibility and little direct control by the state. Characteristics of the models are illustrated by a checklist consisting of eight major components: budgeting; expenditure oversight; accountability expectations; tuition, fees, and pricing policy; financing options; salary administration; enrollment policy; and program review/approval. The checklist can be used to develop a profile of the financing relationship with a state. (SW)

Identifiers—*ASHE Annual Meeting
Past and current developments in academic program review and future prospects are considered, along with seven myths about the adoption and use of program review in higher education. Antecedents of program review include: the development of specialized study programs, the emergence of regional and specialized accreditation and efforts to assess program quality, and the development of improved evaluation techniques. A shift has occurred from reviews primarily undertaken as self-assessment of a program by its faculty to a largely external evaluation for the purpose of institution-wide decision-making concerning planning priorities and budgeting. The demand for accountability requires that the evaluations be undertaken through an objective process. Six outstanding characteristics of program review today are as follows: the use of reviews is widespread; it has become more comprehensive; it is more systematic and formal; its purpose has shifted from formative to summative; it is being more closely tied to other decision-making processes; and attitudes about program review are changing. Myths include: accredited programs do not need review; identifying evaluation criteria is the most difficult step; and program review is synonymous with program discontinuance. A list of 38 reference sources concludes the report. (SW)

Identifiers—*ASHE Annual Meeting, *Integrity in the College Curriculum
Views from the Middle Ages to the Modern Era are traced concerning the role of faculty in collegiate education, the curriculum, and desired learning outcomes. Previous educational thought concerning faculty, curricula, and mission provides a historical paradigm in which the ideological orientation of the 1985 Association of American Colleges' (AAC) report, "Integrity in the College Curriculum" can be interpreted. The AAC recommendation to restore the teaching orientation of the professoriate "as its first obligation" represents a movement away from the thought of Aquinas, Vergerius, and Ticknow which has characterized American higher education since the turn of the century. A revised faculty role emphasizing a greater teaching and formative orientation toward students' intellectual and character development represents a shift to the thought of Hugh of St. Victor, Aquaviva, Erasmus, Day, and Newman. The report further endorsed this group's thought when it revitalized the general education and prescribed manner of the liberal arts curriculum. The report also emphasizes wisdom rather than knowledge as desired outcomes. These orientations renunciate the current state of the American undergraduate experience formed during the twentieth century. However, the report does not fully address the purpose of the baccalaureate degree. (SW)

Views on the 1985 Association of American Colleges' (AAC) report, "Integrity in the College Curriculum," are presented based on lessons from the Greeks and specifically the period 450 to 350 B.C.E. Seven inferences are made on what an Athenian might offer in response to the AAC Report. For the Greeks, the goal of education was wisdom and the development of character. Greek thinkers might find fault with the AAC Report for not emphasizing the link between virtue (values) and responsibility to society. They might view the present curriculum as focused too much on individualism, personal gain, and careerism. Memorization of facts and formulas does not produce knowledge, according to the Greeks, who valued reasoning and the art of

critical thinking. They would probably reject the notion that critical thinking could be taught or learned when separated from literacy. Other recommendations congruous with Greek ideals include: formal education should not be isolated or disengaged from society; instruction, when grounded in exploration of real issues, gives rise to a shared experience that can be defined as the culture of society; adherence to a traditional and formalized curriculum should be avoided; and successful acquisition of wisdom comes through evocative styles of teaching. Cognitive biases that may affect learning by college presidents and the effects of these biases on the presidency and higher education were studied. Based on a recent study of presidential judgment under uncertainty, data were obtained on the perceptions of 252 campus chief executive officers concerning institutional leadership and quality, and the sources of institutional improvement and change. Presidents indicated on a 100-point scale how effective they thought the average college president was as an institutional leader. They also rated themselves and their predecessors. Presidents assessed seven aspects of their campuses at the time they took office, estimated changes in them to date, and predicted their state at the time they will leave office. Finally, presidents identified the most important incident or change at their campus during the past year or so. It was found that presidents build schemas of effectiveness that are based on previous success in their careers and on the normative expectation that presidents have critical effects on institutional life. When they encounter new and ambiguous situations they are likely to anticipate, and therefore to observe, successful outcomes, and to attribute these to their own efforts. Presidents are also subject to errors induced by cognitive distortion. (SW)

Identifiers—*ASHE Annual Meeting

An overview of research regarding mid-level administrators' careers is presented, and research topics and strategies for studying career opportunities are proposed. The review focuses on how mid-level administrators' careers are studied and the purposes of those studies. From research completed between 1969 and 1985, 30 studies about mid-level administrators' careers were selected for review. Content was coded to identify the research questions, design, procedures, and results. The review found that the careers of mid-level administrators were largely unexplored. While profiles of these administrators are available, little is known about the career opportunities for mid-level administrators and the quality of work life. In addition to new directions and innovative approaches, future research must build on theory and be reputable and practical. Future directions for research are suggested, with attention to the following areas: organizational structures and processes, career patterns and mobility, career development, intracareer analyses and comparisons, and new methodological approaches. For each of the 30 studies, a chart identifies administrative areas, the methodology, sites/target group, sample size, gender, and variables reviewed. (SW)

Identifiers—*ASHE Annual Meeting, *University of Kansas

An expanded program review process that includes qualitative, ethnographic, retrospective, and subjective data is described. At the University of Kansas, qualitative indicators were developed and methods were designed to implement them. Reviews were moved from a process of reacting to quantitative self-studies to a procedure that involved: intensive interviews, solicitation of alumni judgments on the merit and worth of their experiences (as opposed to collecting only limited-response surveys), and solicitation of reviews by external consultants who are disciplinary specialists. Results of the expanded reviews included development of qualitative data collection procedures, increased desire for narratives and case studies that contribute to greater appreciation of departmental and program constraints, understanding of where flexibility might exist and where resources are strained, and the development of a "member check" process. This process verifies the accuracy of reports, checks for reliability, assesses the extent of assent with the findings and interpretations, and assures that all parties to the program review are fully informed of the report that is filed. Problems involved the training of faculty interviewers, commitment to the review, and coordinating with statewide reviews. (Author/SW)

Identifiers—*ASHE Annual Meeting

Factors that influence the effectiveness of program evaluation in higher education and eight recommendations for program evaluation are considered. Currently, program evaluation is characterized by negotiation because of three powerful concepts: the nature of multiple constructions and multiple realities; the influence of power distributions throughout higher education institutions; and the role of politics. The theory of multiple realities proposes that participants in organizations create realities about the organization that are based on multiple and often conflicting value systems. Evaluators must take each construction into account and recognize that no single reality exists for the organization. Power is not limited to those who have the funds of authority to commission evaluations, since others can give or withhold information or sway opinion. Since organizational politics is integral to the group's functioning, evaluations cannot avoid politics. Implications and recommendations include: evaluators must understand that evaluation is not research but a teaching/learning process; evaluation is a continuous and divergent process; evaluation not only uncovers various reality constructions but creates realities; evaluation is an emergent process; and program evaluation is a collaborative process between equals. Identifiers—Arkansas, *ASHE Annual Meeting, Colorado, Maine, Michigan, Nebraska, New York

Recommendations of six state reports that addressed issues confronting state governments and public higher education in the last 2 decades, as well as some new issues, are considered using content analysis. The reports were prepared by formal study commissions in the following states: Arkansas, Colorado, Maine, Michigan, Nebraska, and New York. In addition to briefly reviewing related literature, the recommendations are categorized, and new trends in the relationship between the state and higher education are identified. The potential impact of the recommendations on flagship universities are also assessed. The 301 recommendations are grouped into 18 categories, of which those most represented in the reports are: program review, finances, governance, size and scope, and economic development. For each of the 18 categories, tables indicate the frequency of the recommendations found in the six reports, and the distribution of the categories by state. The following conclusions are offered: many of the issues affecting statewide governance have persisted over time; new issues are found; both increased centralization and decentralization are recommended; flagship universities are likely to benefit from recommendations aimed at differentiation; and governors are becoming more active in higher education issues. Four pages of references are included. (SW)

Scholarly productivity of faculty was studied based on the Brim and Wheeler framework of socialization, which takes into account personal and organizational influences on socialization outcomes. Specific influences included norms governing the system, the university's capacity to provide

relevant performance opportunities, and the school's reward/sanction structure. A survey was sent to of Ph.D. and Ed.D. recipients who graduated between 1963 and 1984 from a private urban university (a Carnegie classification Research II institution). The sample of 271 faculty held current appointments. The effects of the Bigian model of academic disciplines as an explanation of productivity differences were also examined. Results indicated that several dimensions of the socialization framework appeared to be significant in distinguishing differences in graduate program experiences and faculty productivity. Preliminary evidence indicates the generalizability of the Brim and Wheeler framework to a Research II institution. In general, faculty productivity in this group tended to be low and the variation in performance high. Producers were found in academic disciplines with highly developed paradigms and with life systems focus. (SW)

Identifiers—*ASHE Annual Meeting, McCook Junior College NE, *New Colleges, Saginaw Junior College MI, Springfield Junior College MA

The reciprocal relationship of college founding and social factors in the external environment was studied in connection with the first public junior college in three states. The three cases were: Saginaw Junior College (reportedly established in 1895 in Michigan); McCook Junior College (1926, Nebraska); and Springfield Junior College (1917, Massachusetts). Attention was directed to: how the colleges originated and their antecedents; factors leading to the establishment of the college; and the conditions, factors, or persons influencing each school's development. In comparing three local institutional histories, information was obtained from newspapers and college publications, histories of higher education in each state, histories of local and state history, and pertinent journal articles and dissertation. For each of the three colleges, the economy, the civic and business support for public education, and the political environment and its relations with the schools all influenced the nature of college founding. College founding in these cases was related to other aspects of educational reform. It was affected by, and sometimes dependent upon, the success of political, economic, and social reforms. (SW)

Identifiers—*ASHE Annual Meeting, Emporia State University KS, *Kansas, Kansas State University, University of Kansas

The program review process in Kansas Regent's institutions was studied, based on Guba's three policy types: policy-in-intention (statements about policy); policy-in-implementation (behaviors/activities found in the process of implementing policy); and policy-in-experience (constructions/perceptions of individuals as they experienced the policy enactment). The program review process of the University of Kansas School of Education was assessed and compared with processes at the Emporia State University and Kansas State University. Specific objectives were to: determine whether discrepencies existed between policy-in-intention and policy-in-experience; identify factors in the implementation process that produced discrepancies; and recommend interventions that would reduce the discrepancy between the processes of intention, implementation, and experience. In addition to examining documents and records of the colleges, interviews were conducted with staff members. It was found that Guba's policy types were helpful in viewing the program review process. Of four policy intentions for conducting the program review, only one, strengthening the role of the Board of Regents, was not accomplished as desired. Participants perceived the process differently depending on their role. Additional findings are covered. (SW)

Identifiers—*ASHE Annual Meeting, *National Labor Relations Board v Yeshiva Univ, Supreme Court

The validity of the U.S. Supreme Court's assertion that faculty members performed certain tasks that made them managers in the case of "National Labor Relations Board v. Yeshiva University" was examined. The following concerns were addressed: whether faculty authority varies between Liberal Arts I and Liberal Arts II colleges, as defined by the Carnegie classification; and whether the perception of faculty authority varies depending on the position the observer holds. The survey instrument, which is appended, was based on the 1969-1970 study conducted by a Committee of the American Association of University Professors. Of 955 questionnaires mailed to staff at 75 Liberal Arts I and 75 Liberal Arts II colleges, 478 usable responses were received from board chairpersons, presidents, chief academic officers, deans, and department chairpersons. The findings confirm the validity of the court decision. The legal standard for determining whether staff members are managers is that they make or effectively recommend policy in certain areas. Faculty members were found to made decisions. Also found were formal mechanisms to elicit faculty opinion and a requirement that administration and faculty concur on decisions. Perceptions of faculty authority varied among the two types of colleges and among the different staff surveyed. (SW)

Descriptors—*Biology, Comparative Analysis, Degrees (Academic), *Department Heads, *English Departments, Higher Education, Influences, *Institutional Characteristics, Intellectual Disciplines, *Power Structure, Role Perception

Identifiers—*ASHE Annual Meeting, *Bigian Model

Perceived influences of biology and English department heads were investigated using a discriminant analysis test of Bigian's model. Attention was directed to the influence of discipline versus the structural variables of department size, type of institution, and highest degree awarded. Questionnaires completed by 586 heads of biology and English departments provided estimates of the level of their influence in 19 functional areas commonly associated with chairing academic departments. It was found that discipline is of secondary importance in explaining the variance in responses of department chairpersons to questions dealing with perceived influence. In both English and biology departments, the mean influence value for chairpersons in small departments was less than that of those of medium size, which was in turn less than that of those in large departments. There was a significant increase in both disciplines in the mean perceived influence value with each successively higher degree awarded. Using stepwise discriminant function analyses, discipline in combination with highest degree and department size accounted for more of the variance than did discipline. The findings are presented in 3-dimensional graphics by plotting the group centroids against the discriminant functions. (SW)

Identifiers—*ASHE Annual Meeting, Student School Fit, Tinto Theory

A causal model based on Tinto's work was employed to explain the long-term persistence/withdrawal of students who began their postsecondary education in two-year institutions. Persistence was defined as completing the bachelor's degree within a 9-year period, or actively working toward the degree as of 1980. The model was estimated on a national sample of 825 students who initially enrolled in 85 two-year institutions in fall 1971. Although there were differences in the factors associated with persistence for men and women, the results tend to confirm the importance of person-environment fit as a salient influence on degree persistence/completion. Measures of academic and social integration had the most consistent pattern of positive direct effects, while much of the influence of student pre-college traits was indirect. That is, the student's experience of college may have an important, unique influence on persistence beyond that of differences in family background, secondary school experiences, individual attributes, and initial commitments on college entry. Subsequent institutional commitment had a significantly stronger positive influence on persistence for men than for women. Conversely, level of secondary school social involvement was significantly more important positive influence on persistence for women than for men. (Author/SW)

Identifiers—*ASHE Annual Meeting, *Integrity in

the College Curriculum

Perspectives on the 1985 Association of American Colleges' report, "Integrity in the College Curriculum," are presented, with attention to connections between the report and ideas from the nineteenth and twentieth centuries. Using quotes from philosophers and scholars, attention is directed to: why the report was written and what it is about, how the report was received, and weaknesses of the report. The report claims there is a crisis in American education, a decay in the college course of study, and an indifference on the part of faculty who focus more on academic careers than on teaching. The report identifies nine experiences basic to a coherent undergraduate education. This paper argues that the report says nothing new, and the notions about the curriculum are distillations of ideas promoted by faculties of today and yesterday. Views about the report are supported by the positions of thinkers such as Dewey, Newton, and Henry Adams. The following views are presented: the report is not in the main current of intellectual thought; listing curricular essentials is an act of futility; the report is not grounded in a sensible notion of history; and the report provides scant evidence of any recognition of fundamental changes in the world and people's perceptions of it. Identifiers—*ASHE Annual Meeting, *Strategic Planning, University of Minnesota

The relationship between strategic planning and environmental determinism was investigated at the University of Minnesota. The central proposition was that for a particular type of institution (a liberal arts college of a large public university), the strategic planning process will not be strategic either in the sense of being environmentally oriented, or in the sense of moving significant resources from lower to higher priority programs. This proposition was tested through an analysis of the program priority setting process and an empirical study of the impact of strategic planning on resource allocations to the 42 departments of the college. Strategic planning had more impact than predicted. There was consensus concerning criteria to be used to set program priorities in this college of diverse disciplines. Decision-makers were virtually unanimous in agreeing on the priority of quality and on the rankings of programs. In turn, the movement of resources was affected by these priorities, with significant movement from low to high priority programs. Included are an explanation of the five-steps of the strategic planning process, the university planning process, 1975-1984; and criteria utilized for program planning. (SW)

Identifiers—*ASHE Annual Meeting

The relative impact of the aging process, pervasive changes in higher education, and career socialization experiences on college faculty members' distributions of work effort was studied. Secondary analyses were completed on the following surveys: the Carnegie Commission on Higher Education Survey (1969) and the Survey of the American Professoriate (1975 and 1977). The sample consisted of white males with appointments in humanities, social science, and natural science departments at Carnegie I institutions. Influences on faculty role performance were determined by testing 11 propositions concerning the changes that could be attributed to age, cohort socialization, environment, and life course. Areas of study included: mean hours devoted to instruction at each time of data collection; measures of service to the department and university; age-related changes in interest that might account for faculty role performance; the effect of socialization experiences (e.g., graduate education, promotion) on the behavior of faculty of the same career age who are evaluated at different times; the effect of the recency of appointment on preference for research and acquisition of grant support; and the effect of tenure and rank on research interest and funding acquisition. Descriptors—Educational Practices, *Higher Education, *Postsecondary Education as a Field of Study, Research Design, *Research Methodology, *Research Needs, *Theories

Identifiers—*ASHE Annual Meeting

Purposes of research in higher education, the issue of research paradigms, and the identification of research questions are discussed in this keynote panel paper. Different purposes of research include conceptual and theoretical development, relating theory and practice, and improving practice. Higher education as a field has not yet given much attention explicitly to the role of research in conceptual or theoretical development. Research can help in translating concepts and theory and showing their fit with practice. Most of the published articles in higher education currently place research in some theoretical or conceptual context. If research is directed to improve practice, the focus is real issues and the effort is likely to be organized around functional categories, such as teaching and learning and financial affairs. Different research purposes suggest various research strategies and methods. In considering topics for research, two criteria are important: significance and interest. Seven suggestions for higher education research are offered, including: identifying significant conceptual, issue, and functionally-based research topics; promoting integrative research efforts that combine varied strategies and methods; and initiating more professional discussions and publication activities to examine the applicability of new approaches. Identifiers—*ASHE Annual Meeting

Problems and perspectives about the college professoriate are discussed. Attention is directed to: organization and location of graduate programs; enrollment declines and fluctuation; scholarly activities of professors; consulting and field work; and teaching. One of the recent developments of higher education as a field of study has been that programs have increasingly been merged into other programs in schools of education. Beginning about 1980, the field of higher education began to decline as a result of budget cuts and the failure of many higher education programs to develop a firm political base on campus. Research in higher education has found itself with decreased financial support from foundations and from the federal government during the past decade. Young faculty who began in the 1970s and 1980s have tended to be interested in developing theoretical models. Tight budgets have also precluded many colleges from bringing in outside consultants. The range of opportunities in field work for higher education programs is limited, and there is an absence of a common knowledge base for students undertaking a doctorate in the field. Because of the smallness of many programs in higher education, professors tend to be generalists since they have to cover a vast number of topics in courses. It is concluded that doctoral programs in higher education face an uncertain future. (SW)

Descriptors—*Administrator Attitudes, Case Studies, College Programs, Higher Education, Legislators, Participant Satisfaction, Political Influences, *Program Evaluation, *Research Problems, *Schools of Education, *State Universities, *Teacher Attitudes, Trustees

Identifiers—*ASHE Annual Meeting, Emporia State University KS, Kansas State University, University of Kansas

The multiple perspectives of participants in a program review process at three schools of education were determined, along with the effect of these perspectives on enactment of program review policies. Participating schools were Emporia State University, which has a large teacher education program, and the University of Kansas and Kansas State University, both of which are comprehensive research institutions with highly visible and politically sensitive schools of education. The objective was to understand the evolution of the program review process as it occurred over time. A case study approach involved document review over an 11-month period; nonparticipant observation; and interviews with 48 university staff, Kansas Board of Regents members, and legislative staff who had participated in program review. Problems included: people holding positions in the universities changed over the period of the education review; school of education faculty, staff, and administrators tended to have a negative view about the review process, while university administrators, board members, and legislative staff tended to have positive views; participants were anxious about the review and reluctant to share information about the review process, and the political nature of the program review. Implications for research on program review are briefly considered. (SW)

nel, Postsecondary Education, Professional Personnel, Salaries, Sales Workers, Service Workers, Student Financial Aid, *Underemployment

The labor market for persons who continue their education beyond high school is projected for 1985. After a brief discussion of the probable changes in the occupational distribution of new entrants by occupation, attention is directed to likely trends in wages of younger workers. Also considered are projections concerning underemployment of college graduates and competition between the sexes. The possible impact on college enrollments of the deteriorating job opportunities for postsecondary graduates is also addressed, and information on financial aid/subsidies for students by income level are included. It is concluded that career prospects will likely be more limited than in previous years for those who attend or complete college. It is suggested that persons who fail to complete college will gain little economic advantage from their brief postsecondary education. However, college graduates, and especially those who obtain a graduate degree in a professional field, will continue to gain a significant, but diminishing, economic advantage, as well as better access to good jobs. It is doubtful that the number of persons who enroll in higher education will decline as a result of these unattractive job prospects. However, students may tend to enroll part-time or attend low-cost schools. (SW)

Identifiers—National Longitudinal Study High School Class 1972, National Longitudinal Study Labor Market Ex, *National Longitudinal Surveys, Panel Study of Income Dynamics, Project TALENT

Ways that data from four major longitudinal surveys can be used in postsecondary education policy analysis are discussed: the National Longitudinal Survey of Labor Market Experience (NLS-LM), Project TALENT, the Panel Study of Income Dynamics (PSID), and the National Longitudinal Study of the High School Class of 1972 (NLS-HS). The potential use of NLS-LM, TALENT, and PSID as alternatives for or complements to NLS-HS is also addressed. After describing the data collected by each survey, attention is directed to the possible relevance of the survey to research tracing the progress of youths after high school. The surveys are compared concerning information content, sample sizes, sampling, and the problem of data obsolescence. It is suggested that researchers have ignored much of the policy-relevant information available in these four databases by relying chiefly on static analysis and a fairly narrow range of topics: who goes to college or what kind of college, occupational/earnings outcomes, and factors affecting educational attainment. Ways of expanding the scope of research and analysis are suggested. Technical features and peculiarities of content that are likely to affect the use of the surveys for policy research are also identified. (SW)

Identifiers—*Europe, France, Netherlands, Sweden, United Kingdom, West Germany

Patterns of government subsidies to higher education in five European countries are considered in order to provide a comparative perspective for U.S. policy-makers. Attention is focused on patterns of subsidizing both institutions and students for the five countries: France, West Germany, the Netherlands, Sweden, and the United Kingdom. The subsidies are assessed in light of stated government objectives, and especially the objectives of efficiency and equity. Profiles of the countries includes information on: financing public and private institutions, free education vs. tuition and fee charges, organizational body responsible for budget development; sources of university income; types of student aid and their distribution; maximum award per student, December 1974; tax relief or family allowances for students' parents; indirect student aid (housing, food subsidies, health); interest rate on loans; and loan repayment. Implications of alternative patterns of subsidy are analyzed in depth, with attention to the optimum levels of subsidy, the case for aiding students by means of grants, whether the subsidy system creates equality of educational opportunity, and how costs of education should be shared between high and low income taxpayers. An ideal student aid package is proposed. (SW)

Descriptors—Age Groups, *College Attendance, *College Graduates, *Education Work Relationship, *Employment Patterns, Employment Statistics, Higher Education, *Labor Market, Occupations, Promotion (Occupational), Salaries, Trend Analysis

The employment of college-educated workers at the start of their careers and promotion patterns for older workers were studied. Attention was directed to the following concerns: the types of jobs available to young college-educated workers in the 1970s compared to the situation for their peers in the 1950s and 1960s; the effect of increased numbers of young college-educated workers on promotion opportunities for older persons with the same level of education; the labor market experience of college graduates compared to persons with some college but less than four years; and work opportunities for college-educated workers resulting from newly-created jobs or openings due to deaths and retirements. Fourteen major occupational groups were divided into four categories based on average total money earnings in 1975: (1) good, (2) intermediate, (3) crafts for men, clerical for women, and (4) low-level. It is concluded that although college graduates in the 1970s have more difficulty obtaining good entry-level jobs than their counterparts during 1950-1970, they have better outcomes than those who completed less than four years of college. The latter, in turn, have better outcomes than those workers with no college at all. Included are detailed tables on labor force mobility by education and occupation. (SW)

Descriptors—*Assignments, *Course Content, *Course Descriptions, Course Objectives, Course Organization, *Educational Objectives, *Evaluation Methods, Grading, Guidelines, Higher Education, *Student Evaluation

Elements that might be included in a course syllabus are discussed, and reasons for a well-written syllabus are briefly noted. The following syllabus elements are covered: course description, course objectives, course structure, textbook and required materials, recommended optional materials, course schedule, deadlines, evaluation methods, policy on re-tests, attendance, statement on plagiarism and cheating, and resource and reference lists. Included are examples of course descriptions, which provide in two or three sentences an overview or general purpose of the course. A list of possible course objectives, which need to clearly communicate expected performance, is also provided, along with an example of how to describe a course structure, which may involve many formats (e.g., lectures, laboratory, contract plan, field trips). Advice on developing the course schedule and on setting and specifying deadlines addresses difficulty students often have in pacing themselves. The following evaluation methods are considered: assignments, examinations, and the grading system. Use of weighting or percentage systems for grades is briefly addressed, and policies on tests and ways of evaluating students are noted. (SW)

Identifiers—*Fund for Improvement of Postsecondary Education

The implementation of a legislative mandate to promote innovation in postsecondary education through the Fund for the Improvement of Postsecondary Education (FIPSE) is analyzed. Attention is directed to how this highly discretionary program successfully translated policy goals into grants practices. The values of two implementation strategies (applying standardized procedures or encouraging adaptation) are compared. A historical analysis of policy development by the FIPSE considers adaptive implementation based on information from program archives, original documents, reports, and interviews with staff. In considering monitoring, the concern is whether innovation was encouraged by insisting upon compliance or by offering assistance. Information on 66 of FIPSE's grants is reported based on data from surveys, workshops, project files, and interviews. During implementation, bureaucratic pressures emphasized efficiency, accountability, and standardization. Supportive conditions at FIPSE's inception enabled staff to pursue an adaptive approach. Then, by emphasizing assistance rather than compliance monitoring, innovation was encouraged. Administrators are advised to tailor their procedures to the main purposes of programs rather than routinely adopting technical and standardized procedures. (Author/SW)

Descriptors—*Class Organization, *Classroom Techniques, *College Students, *Group Experience, Higher Education, *Introductory Courses,

Learning Experience, *Psychology, Student Experience
Identifiers—*Learning Groups, University of Minnesota
The use of learning groups in the introductory psychology classroom at the University of Minnesota, General College, is discussed. Learning groups are used to get students to work together on tasks that teach them concepts or skills. It allows an active discovery process to take place as students use their own and other's resources while working through problems or review exercises. The key to success is tight structure and organization. An explicit and comprehensive course outline, criterion grading, a student workbook, laboratory exercises, frequent quizzes, and extensive feedback are central concepts of the course model. These are necessary features when a class of 270 is divided into groups of four. Teaching assistants and tutors are also used and a training program for them has been designed. Evaluations of the class demonstrate its effectiveness in maintaining student performance, encouraging appropriate study behaviors, and eliciting student's approval of their learning experience. Learning groups provide the social exchange that improves students' educational experience, and avoids modes by which students only listen to lectures or relate to other students competitively. The organization of class sessions on each day of the week is described. (Author/SW)

The background, content, and funding of faculty retraining activities at 17 colleges and universities are discussed. An overview covers characteristics of retraining programs and whether they are successful. For the 17 college/university programs, information is provided on: title, background, purpose, elements, funding, outcomes, and contact person with address and phone number. For four of the institutions, collective bargaining contracts or statements of institutional policies are included. These cover faculty development plans, career development funding guidelines, and guidelines for retraining. The sample of institutions includes statewide systems, public and private four-year institutions, and public two-year institutions. The specific institutions are: California State University, Montana State University System, State University of New York, University of Wisconsin, California State University at Long Beach, Cheyney University, City University of New York, Kean College, Northern Illinois University, University of Tennessee at Martin, Western Michigan University, Beloit College, College of St. Scholastica, Mars Hill College, Mary College, Los Angeles Community College, and Monroe Community College. Descriptors—*College Attendance, Community Colleges, *Enrollment Trends, Full Time Students, *Graduate Students, *Higher Education, National Surveys, Part Time Students, Private Colleges, Professional Education, State Colleges, *Undergraduate Students
Results of a national survey of college enrollment trends for fall 1985 are summarized. Based on enrollment figures from more than 70% of U.S. colleges and universities, it was found that overall college and university enrollments continued to hold relatively steady, despite shrinking numbers of high school graduates and 18- to 24-year-olds. College officials attributed the enrollment stability to improvements in academic programs, increased enrollment of graduate students, and stepped-up recruitment of both traditional and nontraditional students. Some officials who reported enrollment declines cited higher tuition as a factor. Additional findings include: full-time enrollment was down 2% overall, but was stable among private institutions; community colleges showed an estimated 4% decrease in full-time enrollment; for public institutions, part-time enrollment increased by 1.7%; overall enrollment of first-time full-time freshmen increased by about 1%, while at four-year public institutions, it increased by 2%; enrollment for first professional degrees dropped by 2%, but graduate enrollment increased by an estimated 3.5%; in all, 27% of institutions reported significant decreases in full-time enrollment; and another 14.8% of institutions reported significantly increased full-time enrollment. Descriptors—Clubs, *College Faculty, *Faculty Organizations, Gerontology, Higher Education, *Older Adults, *Organizations (Groups), Participation, *Teacher Retirement
Identifiers—*Emeritus Professors, *Retired Persons, Southern Illinois University
The kind of life led by retired faculty and the benefits of belonging to an Emeritus College are discussed. It is suggested that most retired faculty continue to reside in the communities where they spent many years working. They may use the college library and attend functions at the college. They are candidates for the unique organization that may be called an Emeritus College, or center or club, one of which has been formed at Southern Illinois University. The Emeritus College provides the opportunity to maintain associations, do creative writing, give occasional lectures, and socialize with old colleagues. Such an organization must assure administrators and younger faculty that retirees will not interfere, duplicate, or substitute for any teacher, researcher, graduate assistant, or any salaried employed of the university. There should be a clear understanding that retired faculty can serve only in a complementary capacity to enrich the service of the university. It is concluded that some form of official organization of retired faculty fits in with the trend of the times: to provide creative opportunities for educated retirees to help maintain their health, stability, and morale; to involve their expertise and maturity for the benefit of the college; and to encourage interest in the older years. Data concerning the place of residence of students attending Maryland colleges during fall 1985 are presented. The statistical tables indicate campus enrollment patterns of residents of Maryland counties and Baltimore City, out-of-state students, and foreign students. For each county, data are provided on the number of students attending each Maryland campus, including a breakdown for new full-time freshmen, undergraduate students, graduate students, and professional students. The number of students from each county attending the following types of institutions are also shown: public two- and four-year colleges, private two- and four-year colleges, public total, and private total. Enrollment percentages are also provided in separate tables for Maryland residents, residents of other states, and foreign students, with breakdowns by level of study. Appended are data on the enrollment pattern by place of residence for students of both sexes and all racial/ethnic groups combined, as well as a separate table of this information for black students. Data on 1985 faculty bargaining agents and collective bargaining agreements in public and private U.S. and Canadian colleges are presented, along with a brief narrative description of 1985 trends. For each institution, information is provided on the bargaining agent, unit size, the year the current agent was elected, the year the initial contract was signed, the number of campuses, and the contract expiration date. Summary data are also presented on U.S. elections for bargaining agents (name of agent, size, whether the agents were elected, decertified, challenged, or whether no-agent votes were cast). Some 1974-1984 trend data for public and private institutions are provided on: the growth of bargaining agents and collective bargaining agreements, and agreements at two- and four-year institutions. Additional data cover: a 1985 breakdown for public and private colleges by specific agents, geographic distribution of bargaining agents and contracts, the number of faculty represented by the agents, the date of public sector collective bargaining legislation, decertifications for 28 institutions, institutions affected by the "Yeshiva" decisions, and "no agent" votes during 1971-1985. An index of institutions is appended. (SW)

Descriptors—*College Role, *College Students, *Females, Guidelines, Higher Education, Legal Responsibility, *Peer Relationship, *Sexual Harassment, Student Rights, *Teacher Student Relationship
A guide on sexual harassment for female college students is presented. Sexual harassment is defined as coerced, unethical, and unwanted intimacy. The following topics are covered: who is likely to be harassed, the effects of sexual harassment, the difference between voluntary sexual relationships and sexual harassment, verbal and physical sexual harassment, what victims of sexual harassment should avoid doing, how the victim can get the institution involved if individual action does not work, what female students can do about sexual harassment, formal and informal institutional ways to deal with sexual harassment, things to keep in mind, ways to discourage sexual harassment, actions to take if someone else if being harassed, ways to ensure that the institution is handling sexual harassment fairly, what can be done about sexual harassment as a member of a group, what the law says about sexual harassment, other legal options, problems inherent in dating one's professor, and myths/facts about sexual harassment. Examples of sexual harassment are briefly described. Four categories of students who may be especially vulnerable to sexual harassment are identified: women in nontraditional fields, women in graduate school, minority women, and women who are vulnerable because of youth, inexperience, or unassertiveness. Descriptors—Audiovisual Aids, *Classroom Environment, Class Size, *College Instruction, Discussion (Teaching Technique), Higher Education, *Instructional Improvement, *Large Group Instruction, Lecture Method, Notetaking, Questioning Techniques, Student Behavior, *Teacher Student Relationship, Teaching Guides, *Teaching Methods
A practical reference guide for educators who teach large classes is presented, based on a workshop on improving teaching and learning in large classes. The workshop involved weekly meetings for a year at Colorado State University. The following problems of teaching and learning in large classes were identified: social and physical control, class discussion and questions, the personalization of instruction including use of the small group technique, building and maintaining rapport with students and other affective factors, the content and delivery of lectures, providing lecture outlines and ways to encourage notetaking, the delivery and content of the lecture, and the use of media. Workshop participants' teaching assumptions about each of these issues are also listed. Social control is considered to be the management of student behaviors, which is a factor of importance in the large class. Student behavioral concerns include: getting and maintaining students' attention, students' reading school newspapers in class, chattering, seating patterns, and cheating. To promote classroom discussion, it is suggested that an atmosphere encouraging student comments be created, physical obstacles be overcome, and all students be involved. Since a sense of rapport improves learning, nine ways to create rapport are suggested (use humor, student conferences, etc.) (SW)

Descriptors—*Compliance (Legal), Costs, *Federal Programs, Federal Regulation, *Health Insurance, Higher Education, Information Needs, *Medical Services, Patients, *Physicians, Program Administration, Program Evaluation, *Teaching Hospitals
Identifiers—General Accounting Office, Health Care Financing Administration, *Medicare, Social Security Act
Amounts billed for teaching physician services and paid by Medicare carriers were reviewed by the General Accounting Office (GAO) to determine whether such payments had been made only where the physicians had satisfied the requirements of the Social Security Act. Attention was focused on the requirement that teaching physicians must provide a personal and identifiable service to Medicare patients. To assess whether requirements were being met, GAO reviewed patients' medical records for randomly selected samples of Medicare patients from 10 hospitals and 9 states and additional information provided by hospitals. The review covered 8,917 services provided to 1,165 patients. GAO reviewed fee-for-service billings by teaching physicians for inpatient and outpatient services. Documentation for about half of the services, representing about 25% of the amount Medicare allowed, did not show whether the physicians had provided a personal and identifiable service. The inadequately documented services usually involved high-volume, low-cost services such as daily visits. The adequacy of Medicare documentation criteria and monitoring for compliance with Medicare requirements were addressed. Regulations being developed by the Health Care Financing Administration to implement new requirements are noted. Comments from the Social Security Administration and the Department of Health and Human Services are appended. (SW)

**Administration of University Athletic Programs: Internal Control and Excellence. An Executive Summary.**
Pub Date—85
Note—8p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Administrator Attitudes, *Administrator Responsibility, Case Studies, *College Athletics, *College Presidents, Educational Quality, Higher Education, Leadership, *Power Structure, Private Colleges, Problem Solving, *Program Administration, School Surveys, State Colleges
The views of 65 university presidents about athletic programs, the administration of their athletic programs, and the impact of problems of athletic program on university leadership were studied in spring 1985. Ten of the presidents responding to the survey were from private institutions, while 55 were from public universities. On the average, they had eight men's and seven women's sports programs; all of the institutions belonged to the National Collegiate Athletic Association (NCAA) Division I-A. Case studies were also undertaken with four universities under NCAA sanction and four institutions with acknowledged success in blending excellence in both athletics and academics. Lack of internal control (including confused and fractured lines of responsibility) was found to be a critical factor contributing to problems in school athletic programs. Additional findings include: (1) some presidents do not have board backing for "taking charge;" (2) presidents, on the average, are planning to do something besides being president within five years or less; (3) presidents see money pressure to win, and over-zealous supporters, including alumni, as the key factors in athletic problems; and yet (4) presidents see alumni and corporate support growing in importance in the future if academic quality is to improve. (SW)

Descriptors—*College Instruction, *Computer Assisted Instruction, *Courseware, Higher Education, *Instructional Material Evaluation, *Media Selection, *Music Education, Rating Scales
Identifiers—*Liberty Baptist College VA, Software Evaluation
The current use of high technology in music instruction was surveyed, and music-related computer programs appropriate for Liberty Baptist College were recommended. Information on 59 programs was gathered and submitted to a panel of three music instructors, who selected 10 programs for further evaluation. A Courseware Evaluation Sheet was used to rate the 10 programs. The programs can be divided into four main areas (music theory, band, choir, music appreciation). The 10 subcategories are: music in theory and practice, mode drills, aural skills trainer, polywriter, marching band show design, micro-brass series, Pyware charting aid system, the uniform master, octavo filing system, and music lover's guide series. A listing of the programs according to the score ratings was submitted to the chairpersons of the Department of Music and Art and the Division of Fine Arts so that they might implement one or more of the programs. A list of seven commercial and three noncommercial music computer software programs, including addresses, is provided, along with the author of each program and the cost. A sample Courseware Evaluation Sheet is included for each of the 10 programs, along with scores on separate items and total rating for each program. (SW)

Descriptors—*College Instruction, Comparative Analysis, Higher Education, History, *Knowledge Level, *Majors (Students), Musical Composition, Music Appreciation, *Music Education, *Nonmajors, Objective Tests
Identifiers—*Gestalt Psychology, *Liberty Baptist College VA

Students' understanding of musical style periods was assessed at Liberty Baptist College. The investigation was prompted by evidence suggesting that non-music majors who complete a music appreciation course understand a broad overview of music history better than music majors who complete music history courses. Compared to the music history classes, the music appreciation classes tend to more closely follow the Gestalt theory of learning, which involves learning whole concepts rather than individual facts. To determine whether music majors or non-music majors better understood a broad overview of various style periods, a test consisting of 25 multiple-choice items was developed and validated. The test was administered to 37 non-majors after they completed their music appreciation course and to all music majors after they completed the music history courses. It was found that non-music majors understood the broad overview of the style periods better than music majors. The college had been encouraged to require music majors to take a Gestalt-based (overview) course before taking the standard music history courses. The overview musical style periods test is appended. (SW)

**A Comparison Study of Five Music Appreciation Textbooks. Curriculum and Program Planning.**

Pub Date—17 Jul 84

Note—28p.; Ed.D. Practicum. Nova University

Pub Type— Reports - Evaluative (142) — Tests/Questionnaires (160)

**EDRS Price - MF01/PC02 Plus Postage.**

Descriptors—*College Programs, Higher Education, *Instructional Materials, *Media Selection, *Music Appreciation, *Music Education, Rating Scales, *Textbook Evaluation

Identifiers—*Liberty Baptist College VA

Five music appreciation textbooks were compared for selection purposes at Liberty Baptist College. The five textbooks were evaluated by the current instructor of music appreciation classes using the "Textbook Evaluation Form" and the "Textbook Evaluation Worksheet," developed by Crumbly and Copeland. The grade-level of the textbooks was determined using "Fry's Readability Program." Selection of the most appropriate textbook was based on the highest average score from the textbook evaluation form. Eight criteria were used to determine the total score: seven from the worksheet and the readability score. "The Enjoyment of Music," by Joseph Machlis, received the highest total score, which resulted in the highest average score as well. It is recommended that this type of textbook evaluation be used when revisions of current textbooks are published and/or when review of the appropriateness of a textbook is needed. Samples of the textbook evaluation form and textbook evaluation worksheet are provided, along with completed forms with ratings of the textbooks. (SW)

Identifiers—*Great Britain

A comparative budget analysis approach employed by British universities is discussed. The British funding system analyzes in detail unit costs and marginal costs and undertakes comparative assessments of expenditure patterns and priorities for a group of 95 institutions with similar objectives, in which each has autonomy in resource allocation. Categories of expenditures are listed, and equipment expenditures are used as an example. For 16 institutions, 1981-1982 equipment expenditures for business management departments are identified for full-time equivalent students (undergraduates, teaching postgraduates, and research postgraduates). Included are the formulas and calculations used for departmental equipment expenditures, as well as a discussion of the statistical measures employed. Consideration is given to: differential costs associated with different levels of study and different disciplines, partial regression analysis, empirical weighting for different categories of students, use of an iterative computer program to test the suitability of partial regression for every expenditure heading, and evaluating the expenditure patterns of all universities with the computer. An example of comparative expenditures for 1982-1983 salaries and wages in British university libraries is included. (SW)

Descriptors—*College Administration, *Cost Effectiveness, Educational Finance, *Higher Education, *Measurement Techniques, Money Management, Operating Expenses, Program Costs, Regression (Statistics), *Statistical Analysis, Unit Costs

Concepts of costs and cost analysis in higher education are examined, along with how to prepare for a cost study. Specific cost analysis techniques are identified, along with types of data generated and potential problems. In preparing for cost studies, it is important to consider: purpose, types of cost analysis, types of cost, common calculations of cost, and cost measurements. The first step is to determine the decisions/policy implications that will be addressed. Any study will consider how much something costs and why it costs that much. Possible kinds of costs that can be calculated are: cost objectives (e.g., input); cost basis (e.g., historical); cost variability (e.g., fixed); cost-activity relationship (e.g., total); cost-determination method (e.g., specific service); and cost-time relationship (e.g., time period). In higher education, the most common costing approaches are the calculation of: historical, full, average cost of outputs; and historical, total, indirect costs of inputs. Formula budgets based on costs studies are widely used by states and systems. Four ways of measuring costs of a program or activity are addressed, along with three stages of a cost-benefit analysis. An extended example of how to think through a proposed study of the costs of enhanced student recruitment is included. (SW)

Identifiers—*Sweden

Variations in the number of doctoral degrees awarded by Swedish universities since 1890 are being studied. Within a certain field of study, variations are found both at a national level between different periods, and at an institutional level between different universities. The focus is on the faculties of liberal arts, divinity, social science, and science during the period 1890-1940. A limited number of disciplines since 1940, mainly within the humanities and the social sciences, are also considered. The 1890-1940 period was characterized by limited numbers and sizes of available grants for postgraduate studies, as well as limited opportunities for university teaching positions. The analysis focused on the number of doctoral degrees for each of the four areas of study as well as for specific disciplines, and the number of degrees compared to the rate of increase in the number of professorial chairs. In future stages of the project attention will be directed to dissertation developments and the specific professional labor market conditions for doctoral degree graduates, as well as differences between universities in dissertation developments. Also considered in the project are comparisons with other Nordic countries in doctoral degrees awarded. (SW)

Descriptors—*Academic Persistence, Affirmative Action, Aptitude Tests, *College Graduates, *College Transfer Students, Grade Point Average, Higher Education, *High Risk Students, Institutional Research, *Minority Groups, Scores, State Universities, *Undergraduate Students

Identifiers—University of California Davis

Persistence and graduation rates of four types of undergraduate students at the University of California, Davis, (UC Davis) are examined: domestic students with fewer than 12.5 college transfer units, including both regularly admitted students and those admitted by special action; and domestic students admitted with at least 84 but less than 135 college units (junior transfers). Included in the analysis are minority students admitted under an affirmative action effort. Findings include: UC Davis graduated 62.6% of new entrants admitted between 1971 and 1978 with fewer than 12.5 transfer units by winter 1985; a decreasing percentage of students are graduating in 4 years, going from a high of 48.0% for 1972 entrants to 26.6% for 1980 entrants; among new students entering with fewer than 12.5 college units, the proportion of those admitted by special action has increased from 3.8% of the 1971 cohort to 9.7% of the 1984 cohort; of entrants admitted by special action between 1971 and 1978 with fewer than 12.5 college units, only 28.3% had graduated by winter 1985; and 73.8% of students admitted as junior transfers between 1971 and 1980 had graduated by winter 1985. Information is also provided on Scholastic Aptitude Tests scores and grade point averages of new entrants. (SW)

Descriptors—Administrator Attitudes, *Church Related Colleges, *College Environment, Comparative Analysis, Enrichment Activities, Extracurricular Activities, Higher Education, *Institutional Characteristics, *Liberal Arts, *Private Colleges, School Community Relationship, *Small Colleges, Student Characteristics, Teacher Attitudes

Identifiers—*Diversity (Student)

A sample of six small, liberal arts, Christian colleges were compared to schools within the structural classification of liberal arts colleges. The comparison was based on 11 environmental dimensions measured by the Institutional Functioning Inventory (IFI), which used the collective perception technique (i.e., the combined responses of all faculty and administrators). Normative data for private liberal arts colleges were derived from 5,877 faculty and administrators from 96 schools. It was found that the sample of small, liberal arts, Christian colleges were perceived to provide far fewer intellectual and aesthetic extracurricular activities on campus than the larger liberal arts colleges. While the liberal arts colleges do not appear to put high priority on research and scholarship, the sample col-

leges see this area as even less important. The sample colleges are also perceived to have less diversity on campus in terms of the types of people that work at and attend the colleges, and behavioral and social expectations are more clearly defined and enforced. They are slightly more traditional in their educational practices and have slightly less community involvement than the liberal arts colleges. Finally, higher feelings of community and belief in the objectives of the institution are found on the campuses of Christian colleges. (SW)

Descriptors—American Indians, Bilingual Teachers, Black Students, *College Preparation, College Science, *College Students, Females, Higher Education, *High Risk Students, Hispanic Americans, Low Income Groups, *Minority Groups, Premedical Students, *Private Financial Support, Program Evaluation, Remedial Programs, School Holding Power, School Orientation, Student Needs, *Success, Summer Programs

Identifiers—Association of American Colleges, *Minority Achievement Program

College and university efforts to address minority students' needs are described. The Minority Achievement Program (MAP) provided grants to selected colleges to test a range of programs and services to help certain student groups succeed in achieving their educational goals. Descriptions of 10 selected projects are provided, along with information on the school's enrollment and the amount of the award, which ranged from $2,145 to $9,000. Information is also provided on the purpose and findings of an evaluation of MAP. The evaluator, Herman Blake, considered common elements that led to success/failure of the MAP-funded activities, and based on individual projects offered conclusions on how colleges can best address minority students' needs. Four conditions that significantly affected project outcomes were identified: institutional commitment, program leadership, program conceptualization, and faculty involvement. In addition, these criteria were applied in evaluating the 10 selected projects. Six of the 10 projects were strong in all four areas. The other four projects, which had weaknesses in one or more of the four critical areas, were determined to have less successful outcomes. Recommendations for campuses and funding agencies are included. (SW)

Identifiers—*City University of New York

The academic careers of City University of New York (CUNY) freshmen who enrolled during the initial years of the open-admissions policy were studied. For 1970, 1971, and 1972 entrants, educational attainments were measured through 1984. Attention was directed to: rates of graduation for undergraduate degrees after 12 or more years; how students accumulated credentials at various time intervals; the success of community college entrants in earning bachelor's degrees; and the proportions earning masters and professional degrees. Open-admissions students were compared with regular students who did not need the program to qualify for a place at CUNY. Since CUNY's policy was designed to expand educational opportunity for disadvantaged minority groups, data were assessed for the major ethnic constituencies of CUNY's entering classes (White, Black, and Hispanic students). Data were examined separately for CUNY's senior and community colleges. The effects of changes in financial aid on educational attainments were also considered. It was found that about 20% of regular students needed more than 5 years to earn the bachelor's degree, while among the open-admissions students, 40% needed more than 5 years to finish. (SW)

Descriptors—*Clinical Diagnosis, Cognitive Processes, *Difficulty Level, Discourse Analysis, Encoding (Psychology), Higher Education, *Medical Case Histories, *Medical Students, *Physicians, *Reading Comprehension

The effects of the randomization of information in clinical cases on the comprehension of 16 physicians and 16 medical students were studied, using structured and unstructured forms of two clinical cases. Attention was directed to the effects of case difficulty and text structure on representations of cases in written protocols, ability to access the relevant and critical information in the cases, and ability to generate diagnoses. The research paradigm was drawn from cognitive science and the analysis techniques were based on the techniques of discourse analysis. when viewed in terms of assessing "relevant" information, major findings indicate that both experts and novices in medicine are affected by the structural form of clinical cases and that this effect interacts with the difficulty level of the case. These effects were not present when viewed in terms of access to "critical" information. The comprehension of information in an easier clinical case was found to replicate the findings of studies in other areas of expertise. Difficult cases were found to be processed in a different manner. Experts were differentiated from novices by their ability to selectively encode relevant and critical case information and by the quality of their diagnoses. (Author/SW)

Identifiers—*Association for Institutional Research, *Excellence in Education

The evolving profession of institutional research as it exists in 1985, historical antecedents, and ideas about possible futures are presented in two addresses, a panel discussion, and an awards program from the Association for Institutional Research's annual forum. In "Promoting Excellence: Pursuing the Challenge of Quality," Burton R. Clark outlines points about the American higher education system that strongly affect institutional behavior, and considers excellence in different types of colleges, as well as different emphases and values within higher education, and the question of whether excellence can be pursued in all of them simultaneously. Excellence for the system as a whole is also addressed, in view of decentralization and diversification, and the localization of the search for excellence. James A. Ogilvy's paper, "The Changing Environment: Challenges for Higher Education," considers the effects of new technologies on higher education, and specifically the metaphysics of information and the relationship between information technologies and values. The presidential panel presentation is entitled "Institutional Research in Transition: Proliferation or Professional Integration" and involves: Mary E. Corcoran, Richard B. Heydinger, Frank A. Schmidtlein, Bernard S. Sheehan, Marvin W. Peterson, and Cameron L. Fincher. (SW)

Descriptors—*Adult Learning, *Allied Health Occupations Education, Grading, Guidelines, Higher Education, Interpersonal Relationship, Performance Contracts, *Physicians Assistants, Staff Role, Student Evaluation, Student Needs, *Supervision, *Supervisory Methods

A handbook for supervisors of students training as physician assistants is presented, based in part on

workshops and interviews conducted at Northeastern University (Massachusetts). Topics include: the role and attributes of the supervisor, needs of adult learners and adult learning styles, beginning the supervisory process, use of skills in ongoing supervision, special problem areas for supervisors, and evaluation and grading. Qualities students want in a supervisor include: being supportive and friendly, listening actively, and possessing professional knowledge and good judgment. The supervisory process begins with getting acquainted, providing orientation materials, a guided tour, working out the learning contract, and scheduling meeting times. Skills in ongoing supervision include: demonstration and observation, teaching through feedback, using negative feedback (assertion and confrontation), and group supervision. Special problem areas for supervisors may involve student stress, the unassertive student, and dealing with difficult students. Concerns in evaluation/grading include objectivity vs. subjectivity, preparing for the final evaluation, performance assessment, and measuring change and growth. Two sample learning contracts are provided, along with a form for providing feedback to supervisors, and a student evaluation form. (SW)

Descriptors—Black Colleges, *Black Teachers, Faculty Development, *Faculty Recruitment, Fellowships, *Graduate Study, Higher Education, Professional Training, *Teacher Shortage, Teaching Assistants, *Whites

Identifiers—*Predominantly White Colleges, *Western Michigan University

The shortage of black faculty at predominantly white institutions is discussed, along with the efforts of Western Michigan University to increase the number of black faculty. Reasons cited for the shortage of black faculty (about 4% of U.S. faculty in 1980 were black) include institutional racism, failure of affirmative action policies, low numbers of black Ph.Ds, declining emphasis on recruiting and retaining minority graduate students, and a discouraging job outlook for new doctorate holders. A decreasing black faculty presence means fewer role models for black graudate students, who may find white colleges inhospitable. Western Michigan University has created The Black College Program to promote the professional development of faculty from historically black institutions. Junior faculty from black schools can enroll in graduate programs to attain advanced degrees or specialized training. Fellowships and assistantships are available, and reciprocal financial support from the home institution is encouraged. The university hopes to increase the number of blacks holding advanced degrees and to recruit graduates to become its faculty, as well as to broaden the exposure of its white faculty and students to the black culture. The home institution may also increase the number of black faculty with advanced degrees. (SW)

Statistical data on higher education activities in North Carolina during 1985-1986 includes simple counts of enrollment and degrees conferred, as well as complex analyses of the flow of student transfers among institutions. The following sections are presented: current enrollment, enrollment trends, undergraduate transfers, degrees conferred, faculty, library resources, cost to students, admissions, student financial aid, student housing, and general. Among the 83 statistical tables are the following: headcount enrollment in state institutions by institution, residence status, full- and part-time status, and sex; headcount enrollment in community colleges and technical institutes and colleges by institution; average age of total headcount in the University of North Carolina; home county of in-state undergraduate students by institution; undergraduate transfers to North Carolina institutions by type of institution; number and percent of degrees conferred by North Carolina institutions by field of study, type of institution, and level of degrees; academic rank and sex of full-time faculty in North Carolina institutions; undergraduate tuition and required fees combined; average Scholastic Aptitude Test scores of entering freshmen; and financial aid for professional students. **Guide to External Degree Programs in the United States. Second Edition. American Council on Education/Macmillan Series in Higher Education.**

American Council on Education, Washington, D.C.

Report No.—ISBN-0-02-932350-9

Pub Date—83

Note—124p.

Available from—Macmillan Publishing Company, 866 Third Avenue, New York, NY 10022 ($16.95).

Pub Type— Books (010) — Reference Materials - Directories/Catalogs (132)

**Document Not Available from EDRS.**

Descriptors—Accreditation (Institutions), Achievement Tests, *Admission Criteria, *College Programs, *Degree Requirements, Enrollment Trends, *External Degree Programs, Grading, Higher Education, In State Students, *Institutional Characteristics, Majors (Students), Nontraditional Education, Out of State Students, Prerequisites, Prior Learning, Program Descriptions, School Surveys, Tuition

Identifiers—*United States

Information is provided on external degree programs offered by U.S. colleges and universities. These academic programs are offered by an accredited institution that stipulates that less than 25% of the degree requirements be campus-based and that provides instruction for off-campus learning. Institutions offering external degree programs are listed alphabetically by state. For each institution, a mailing address that was current fall 1982 is provided, along with 15 items describing the program: the degree title and areas of study available; institutional accreditation; the kind or amount of previous education required for admission to the program; academic practices regarding prior learning and standardized achievement tests; the number of semester or quarter hours required to receive a degree; the minimum on-campus time required for study in order to complete the program; the kinds of instruction for off-campus learning available; information materials available; the grading system; the enrollment as of 1982; the number of external degrees conferred by the program through 1981; the year the program began; and the institution's policy regarding the acceptance of out-of-state students in the program and the tuition differential for these students. Institution and field of study indexes are included. (SW)

Descriptors—Case Studies, Catholic Schools, Centralization, Church Related Colleges, *College Role, Comparative Education, Decentralization, Economic Factors, Educational Finance, Education Work Relationship, *Foreign Countries, *Governance, *Government School Relationship, *Higher Education, Institutional Autonomy, *Institutional Mission, Majors (Students), Political Influences, Private Colleges, Public Policy, Religious Factors, State Colleges

Identifiers—Brazil, Chile, *Latin America, Mexico

Major patterns of relationship between the public and private sectors in Latin American higher education are discussed. Three key evolutionary waves are identified that have led to three private-public patterns dominant in Latin America today. For both the public and private sectors, attention is directed to origins and growth, who pays and rules, and whose interests are served. For Chile, Mexico, and Brazil, in-depth case studies analyze patterns of evolution, finance, governance, and function. A regional overview, including 20 other Latin American republics, considers the extent to which the three major public/private patterns exist in finance, governance, and function. Included are comparative perspectives based on principal foreign models. In Chile private universities approximate their public counterparts; in Mexico secular elite universities dominate the private sector; and in Brazil the private sector absorbs an unusually large educational demand. Additional considerations include: the Catholic subsector, autonomy and state control, institutional centralization/decentralization, religious missions, political ideologies, economic orientations (field of study and job market), and the positive and negative aspects of privatization. **Doctoral Education in Nursing: An Assessment of Quality, 1979-1984.**

Spons Agency—Health Resources Administration (DHHS/PHS), Hyattsville, Md. Div. of Nursing.

Pub Date—Apr 86

Note—37p.; Paper presented at the Annual Meeting of the American Educational Research Association (San Francisco, CA, April 16-20, 1986).

Pub Type— Reports - Research (143) — Speeches/-Meeting Papers (150) — Tests/Questionnaires (160)

**EDRS Price - MF01/PC02 Plus Postage.**

Descriptors—Alumni, *College Faculty, *Doctoral Degrees, *Educational Quality, *Graduate Students, Higher Education, *Nursing Education, Participant Satisfaction, Program Evaluation, *Scholarship, Writing for Publication

Growth and change in the quality of doctoral education from 1979 to 1984 were analyzed, using Holzemer's program evaluation schema and a repeated measures design. Fifteen nursing doctoral programs participated in both a 1979 and 1984 study using Educational Testing Service and Graduate Program Self-Assessment (GPSA) questionnaires. A total of 14 faculty, 12 students, and 12 alumni reported their perceptions of the quality of their doctoral programs on 16 dimensions. The questionnaire consisted of about 60 statements concerning characteristics of the program, with agree-to-disagree or poor-to-excellent ratings as response options, along with demographic items, such as academic rank, tenure, and years teaching. The findings suggest that, while doctoral programs have experienced a significant growth, they have maintained a quality environment. Faculty demonstrated an increased commitment to scholarly activities as evidenced by an increase in publications, presentations, and perceptions of time spent on scholarly activities. Students in 1984 were better prepared than students in 1979 and pursued their graduate education more on a part-time basis. The evidence documents a growing scholarly maturity among nursing doctoral programs. Descriptions of the 16 GPSA summary scales are appended. (SW)

Descriptors—*Change Strategies, College Planning, College Programs, College Role, Educational Finance, Enrollment Trends, Institutional Mission, *Mission Statements, *Postsecondary Education, *Private Colleges, Proprietary Schools, *State Colleges, State Universities, *Statewide Planning

Identifiers—*Maryland, University of Maryland
Maryland's state postsecondary education system is described, along with actions to address state needs, and institutional roles and missions. The types of institutions are distinguished and information is provided on enrollments for individual community colleges, state universities and colleges, and private institutions. Planning assumptions are also considered, with attention to the traditional college-aged population, the population older than the traditional college student, student program interests, the state's economy, access to educational resources, quality, and competition for funding. The following actions to address state needs are covered: enhancing the University of Maryland system, strengthening undergraduate education, improving partnerships with both the public schools and with business and industry, providing greater focus for campus activities, centers for excellence, graduate studies in Baltimore, implementation of the state's equal educational opportunity plan, increasing funding, and expanding accountability mechanisms. Mission statements are provided for community colleges and state colleges and universities concerning degrees offered, programs, enrollments, research, and public service, and specific information is provided on some of these areas for 14 institutions or branches. **Retention of Culturally Diverse Students: A Successful Teaching Strategy.**
Pub Date—86
Note—18p.
Pub Type— Reports - Descriptive (141)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Academic Achievement, Academic Persistence, *College Freshmen, Course Descriptions, Higher Education, Individual Development, Learning Motivation, *Minority Groups, Psychoeducational Methods, Psychology, *School Holding Power, *Seminars, Skill Development, *Student Adjustment, Student College Relationship, Student Development, Study Habits
Identifiers—*Diversity (Student)
A strategy to improve retention and graduation rates of culturally-diverse students in postsecondary settings is described, along with a framework for counselors and educators working with these students. A guided studies seminar in psychological education utilizes a highly-structured educational program and emphasizes the Deliberate Psychological Education method. Counselors and educators may use this program to facilitate psychological growth and maturity in non-cognitive area as well as to promote positive academic achievement within the cognitive realm. The seminar focuses on three basic content areas: (1) developing study habits, motivation, and skills; (2) presenting major concepts and theories in psychology, education, and human development, with emphasis on personal and social adjustment, self-assessment, and college survival; and (3) focusing on U.S. higher education systems in order to bring the college/university system into perspective and help freshmen with goal-setting, expectations, and leadership development. Information is provided on course structure, educational methodology, delivery systems, and a one-year followup evaluation. Topics of the course are also described, including demystifying the university, time management, communication skills, and listening and note-taking. (SW)

**A Renewed Partnership. Report of the White House Science Council Panel on the Health of U.S. Colleges and Universities.**
Office of Science and Technology Policy, Washington, DC.
Pub Date—Feb 86
Note—57p.
Pub Type— Reports - Descriptive (141)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—Change Strategies, Engineering, Federal Aid, Federal Government, Fellowships, Financial Policy, *Government School Relationship, Graduate Study, *Higher Education, Industry, Money Management, Program Administration, Program Costs, *Research, Scholarships, *School Business Relationship, *Sciences, *Technology, Undergraduate Study
The interactions between the federal government, colleges, and industry in U.S. research and higher education in the areas of science and engineering were examined by a special panel of the White House Science Council. Recommendations to retain U.S. leadership in areas of science and technology are offered by the panel, which is composed of members of the academic/nonacademic research community. Concerns included: graduate education and research, federal support of university research, restoring the university infrastructure, multidisciplinary science and technology centers, costs of university research, indirect costs, the problem of documenting costs, micromanagement of university research, mandatory cost sharing, indirect cost reimbursement, stability of research support, the peer review process, the structure of grants and contracts, undergraduate scholarships, graduate fellowships, the universities and industry, the universities and the federal laboratories, and the role of state governments. Appended materials include: a list of witnesses appearing before the panel in 1984 and 1985; questions sent to different groups (university presidents, foundations, industrial chief executive officers, principal investigators); correspondents providing input to the panel; and data on indirect costs. (SW)

**Evaluation of Remedial Programs at UC Davis.**
Pub Date—Mar 86
Note—11p.
Pub Type— Reports - Descriptive (141)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Academic Advising, Basic Skills, *College Instruction, Economically Disadvantaged, Educationally Disadvantaged, Educational Objectives, Educational Quality, Evaluation Criteria, Higher Education, High Risk Students, *Individualized Instruction, *Outcomes of Education, *Program Evaluation, *Remedial Programs, Research Design, *Standards, State Universities
Identifiers—*University of California Davis
Efforts at the University of California, Davis, (UC Davis) to develop standard evaluation models for remedial programs are described, and three UC Davis evaluation studies are considered. A standard evaluation model entails a formal orientation, a singular values perspective, and a primary audience of program funders and oversight agencies. The research questions and the overall goals are defined prior to evaluation by these parties, not by campus evaluators/staff. Evaluations are based on predetermined program goals, and these goals may be translated into easily measurable outcome variables, (e.g., academic performance and retention), in order to develop comparable data across campuses. The evaluation design is established beforehand, and the methodology is carefully controlled and duplicated on each campus to ensure comparability of results. Successful evaluations involve four criteria: (1) the evaluation clearly identifies and specifies program goals, (2) the evaluation identifies and addresses the concerns of its primary audience, (3) the evaluation develops appropriate measures of program outcomes as they relate to program goals; and (4) the information provides a sufficient basis for judging program worth. The three UC Davis evaluation studies concentrated on Individualized Study Programs. (SW)

Identifiers—*Asia, *Pacific Region
The outcome of a study workshop with participants from 11 Asian and Pacific countries, this report is broadly divided into four chapters. The first gives an overview of the philosophical concept and challenges of distance education at the higher education level in the context of this region. The second chapter contains synopses of reports presented by the participants on experiences and developments in distance education in each of their countries: (1) Australia; (2) Bangladesh; (3) China; (4) India; (5) Indonesia; (6) Pakistan; (7) Papua New Guines; (8) the Philippines; (9) Sri Lanka; (10) Thailand; and (11) the Socialist Republic of Viet Nam. Chapter three features two institutions of distance education, Darling Downs Institute of Advanced Education (DDIAE) and Sukhothai Thammathirat Open University (STOU), and describes their operations in contrasting situations. The final chapter deals with planning, operating, and evaluating a distance education system. This part of the workshop, held at DDIAE, involved the participants in discussion and practical work. **Educational Technology. E.C.I.A. Chapter 2. Final Evaluation Report.**
District of Columbia Public Schools, Washington, DC. Div. of Quality Assurance.
Pub Date—Sep 85
Note—54p.; For an earlier evaluation report, see ED 259 713.
Pub Type— Reports - Evaluative (142) — Tests/Questionnaires (160)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—*Computer Literacy, Computer Software, Educational Technology, *Educational Television, Elementary Secondary Education, *Evaluation Methods, Evaluation Utilization, Grade 7, *Instructional Improvement, Interviews, Kindergarten, Mathematics Education, Questionnaires, School Surveys, Science Education, Worksheets
Identifiers—District of Columbia, Education Consolidation Improvement Act Chapter 2
The Planning, Monitoring and Implementing (PMI) Evaluation Model for Decision-Making was used by the District of Columbia Public Schools to monitor the efforts of their Office of Educational Technology in providing direction and coordination for computer related activities, and in planning and implementing educational television (ITV) projects in mathematics and science. The target population included seventh grade mathematics and science students and teachers in eight pilot schools for the seventh grade Mathematics and Science Project, and kindergarten students and teachers in 15 schools for the Writing-to-Read project. Included are: (1) project summary and findings; (2) background and project objectives; (3) a description of the project; (4) the external evaluation design; (5) the program results; and (6) appendices. Appended materials include the evaluation model schema; summaries of teachers' implementation of the Writing-to-Read Program based on a configuration checklist and levels-of-use interviews; and results of teacher questionnaires on the Writing-to-Read program, including writing and typing components, classroom management questions, and teacher aide questions. Findings show that while there is little empirical evidence to evaluate its implementation, the ITV project seems to be functioning well; in addition, the majority of Writing-to-Read teachers are implementing the program in an ideal fashion and students have responded favorably to it. Descriptors—*College Credits, Educational Planning, Foreign Countries, *Higher Education, *Intercollegiate Cooperation, Position Papers, *Transfer Policy, *Transfer Programs
Identifiers—*Australia
Cross-crediting, or credit transfer, exists in Australia as a confused plethora of agreements in and

amongst tertiary institutions. By and large the student is responsible for initiating or requesting credit for studies undertaken elsewhere, either in the past or concurrently. This study describes the development of an agreement on cross-crediting by five institutions of higher education which provides a model for collaboration in distance education, and suggests steps for its implementation. The agreement allows students to enroll concurrently in more than one institution and be given credit in advance for all academic work completed satisfactorily. The study effort began with historical and comparative analyses of information about current policies on inter-university enrollment. Next, an assessment of the general efficiency of these policies and the degree of existing or obtainable agreement among the institutions and their individual policies was performed. Following considerable correspondence and the circulation of several memoranda, including a draft memorandum of an agreement on cross-crediting, the representatives of the five participating universities reached agreement on principles and practices for cross-enrollment and cross-crediting. This report includes an executive summary of the study as well as a more detailed description of the methodology and findings, a discussion of the major issues involved, and strategies for further progress. References and copies of memoranda of agreement are appended. (Author/THC)

**Is Computer-Based Instruction Ready to Move into the Home?**

Pub Date—Jun 84

Note—23p.; Paper presented at the Conference on Computers in the Home–New Opportunities and Challenges for Education sponsored by the National Institute of Education. (Washington, DC, June 7-8, 1984).

Pub Type— Information Analyses (070) — Reports - Evaluative (142) — Speeches/Meeting Papers (150)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—*Academic Achievement, Access to Education, Attitude Measures, *Computer Assisted Instruction, *Educational Television, Elementary Secondary Education, Futures (of Society), Higher Education, *Home Study, *Instructional Effectiveness, *Literature Reviews, Meta Analysis, Research Methodology, Student Attitudes

Identifiers—Computer Equity, Learner Control, PLATO, TICCIT Computer System

This paper discusses the effects of the instructional use of computers and projects possibilities for their home use. Following a brief introduction, exemplar studies of two computer assisted instruction programs–TICCIT and PLATO–are described. The TICCIT study contrasted the performance of over 5,000 community college students in classes taught primarily by computer with the performance of similar students from lecture/discussion sections of the same courses. The PLATO evaluation included both a large scale demonstration with approximately 4,000 students in community colleges and a smaller demonstration with 1,000 students in elementary classrooms. Research methodologies and findings are given for each study. A 4-year longitudinal study of the uses of CAI for compensatory education in the elementary grades that was conducted in Los Angeles is also described. Several literature reviews and meta analyses are then presented which examine the educational uses of computers and learner control in computer-based education. Comparisons are drawn between the instructional effectiveness of computers and educational television, and supportive findings are presented from evaluations conducted during the early years of "Sesame Street" and "The Electric Company" to determine their educational value. Studies which examine computer equity issues are also reviewed. A brief discussion of new challenges and problems for the educational establishment that will result from computer-based instruction in the home concludes the paper. (JB)

Descriptors—College Administration, College Environment, College Presidents, College Students, Computer Literacy, Computer Software, *Futures (of Society), *Higher Education, Liberal Arts, *Microcomputers, *Technological Advancement

Identifiers—*Franklin and Marshall College PA

Serious budgetary and administrative questions concerning educational computing and technology confront liberal arts college administrators. What will be the impact of microcomputers and other technologies on a liberal arts education? Since monies are less and less apt to come from outside grants, especially for non-innovative institutions, and many computer companies have ceased offering major discounts or free equipment, where will funds originate? Will distributed computing, with downloading to microcomputers, make the typical computer center obsolete? How will colleges handle increasingly computer-literate students? Several colleges now have found that upwards of 80% of their freshmen will buy a personal computer from the school. In order to ensure compatibility and greater utilization, an official campus machine for students, faculty, administrators, and support staff should be selected. As more and more students and campuses become computerized, the potential software market will expand exponentially. This enormous market will drive the development of more and better truly educational software, ingenious software with interactive capabilities. The computer revolution will change all aspects of college life–instruction, classroom configurations, library use, campus communication, and institutional administration. Decisions must be made to ensure that dollars are spent for the right technology at the appropriate time. Education needs the gains in quality and quantity of work that computing and technology can bring. (JB)

Identifiers—*Company Towns, Computer Games, TRS 80 Model III

Microcomputers were introduced into the Scotia Union School District in rural northern California in 1979 when the district superintendent-principal proposed using part of a "forest reserve grant" from the United States Forest Service in California to purchase two microcomputers, one for use in the special education classroom and the other for use in the school office. The paper details the evolution of the acceptance of microcomputers by faculty, students, and the community until the fall of 1984, when there were 15 computers in use in the school. In a 5-year period, the school had gone from being totally untouched by computer technology to having a reputation as one of the leading rural users of microcomputers in the state of California. This assessment of the conditions which led to the expansion of computer technology in Scotia provides insight into that process as it might occur in other rural settings. The case study includes discussions of the community setting; the growth of computer usage in Scotia; its impact on teaching and learning; and future prospects. (THC)

Descriptors—Broadcast Reception Equipment, Broadcast Television, Communications Satellites, *Futures (of Society), *Information Networks, *Information Science, *Lifelong Learning, *Microcomputers, Position Papers, Radio, *Technological Advancement, Telephone Communications Systems, Television, Videotex

This exploration of possible information and communications developments in the future focuses on the picture of the family or individual depending on access to information as a key to their status in society. The scenario involves the home as the center for conducting business, banking, shopping, and receiving lifelong education, and this paper explores the questions of whether this is an accurate picture, how it is to be accomplished, and what sort of timetable it will entail. Distribution, storage, and control technologies are discussed, including broadcast transmissions; Multipoint Distribution Services (MDS) and Instructional Television Fixed Services (ITFS); direct broadcast satellites; cable television; fiber optics; radio and television subcarriers; teletext and videotex; home computers; videodiscs; video cassettes; high definition television; and "smart cards," i.e., small computer chips imbedded between the plastic layers of bank and credit cards. A brief look at implications of the information and communications revolution for society concludes the paper. (THC)

Identifiers—District of Columbia
The first of two reports in this document details the use of a trial teletext service in residential Washington, D.C. during the second half of 1981. It is emphasized that caution must be exercised in interpreting the results since the trial was designed as a pilot with a sample of only 40 households. In addition, there were significant technical problems, as is often the case with trials of new services. The primary objectives of the pilot field trial were to refine the research hypotheses and develop the research design for a larger field trial. The introductory chapter summarizes features important to the context of the results reported: characteristics of the residential sample; terminal equipment; content of the service; survey and measuring instruments; and consequent limits to the generality of the results. Three additional chapters are devoted to use of the service as measured by meters; residential users' attitudes toward the service as determined by interviews; and a summary of the implications. The second report is concerned with the same population of residential viewers' use of the teletext service broadcast in collaboration with WETA-TV during the first half of 1982 after substantial revisions had been made in the original system. This report focuses on the content of the service, the measuring instruments used, and limits to the generality of the findings. Two topics are covered that were not addressed in the previous report: use of index pages and respondents' willingness to pay for teletext. A concluding statement reviews the implications of the findings for the design of a teletext service, the technical design, and research methodology, and offers some tentative conclusions based on the initial analysis of the data. References, a copy of a questionnaire, and a statistical summary are appended. (THC)

Descriptors—Broadcast Industry, *Broadcast Reception Equipment, Information Networks, *Marketing, Networks, Position Papers, *Production Techniques, Programing (Broadcast), *Public Television, *Teleconferencing, Television Research
Identifiers—Public Broadcasting, *Video Teleconferencing
This guide is designed to acquaint public television station managers and staff with the video-teleconferencing business. For managers, the goal is to provide an overview of the market and an understanding of the facilities and personnel required to enter it. For staff personnel who may be assigned to video-teleconferencing responsibilities, the goal is to provide a basic understanding of the various elements required in each phase of the business, i.e., marketing, production, networking, and reception. The first chapter presents a brief historical review of one-way video/two-way audio video-teleconferencing. It lists some of the key motivations that have prompted groups to employ the medium, and concludes with some observations on competitive trends that may affect the public broadcaster's future role in video-teleconferencing. The second chapter covers market identification, promotion, and public awareness practices, direct sales methods, and video-teleconference service proposals. The focus is on small-market public television stations. To facilitate reading, synopses of the remaining chapters–Production, Networking, and Reception–are provided. Each chapter covers methods, procedures, and business considerations, and includes samples, examples, and diagrams. A partial directory of video-teleconference networking agents and packagers is appended. (THC)

Descriptors—Case Studies, *Educational Television, *Higher Education, Institutional Characteristics, *Marketing, Programing (Broadcast), Student Characteristics, *Telecourses, Television Research
Identifiers—*Market Research, *Public Broadcasting
A study was undertaken in 1981 to evaluate the telecourse campaign supported through the Corporation for Public Broadcasting (CPB) and the Public Broadcasting Service (PBS). This report contains a summary of promotional strategies used in six selected markets and an evaluation of the effectiveness of these strategies. The objectives of the study were to: identify successful promotional techniques; describe the end-user of telecourses by demographics, occupational role, or college profile; provide market planning advice and suggestions for future promotional efforts; and measure telecourse reach and penetration. Data were collected via: (1) interviews with participating public television stations; (2) interviews with participating schools; (3) interviews with non-participating schools; (4) surveys of students enrolled in telecourses; and (5) surveys of the general audience. Findings are summarized in the following areas: station and college experience; station recruiting; college attitudes and motivation; advertising and promotion; general audience awareness of telecourses and promotion; general audience telecourse viewing; general audience motivation; telecourse student profile; telecourse enrollment; students' awareness of telecourse advertising; student motivation for enrolling; student viewing habits; satisfaction; and future intentions. The executive summary includes an overview of the study, its purpose and objectives, a summary of the findings, and conclusions. The document also contains recommendations, findings, and a description of the survey methodology. (THC)

**The Impact of the Cable Television Industry on Public Television.**
Pacific Mountain Network's Television Ratings Analysis Consortium.
Spons Agency—Corporation for Public Broadcasting, Washington, D.C.
Pub Date—[Sep 83]
Note—89p.
Pub Type— Opinion Papers (120) — Reports - Descriptive (141)
**EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.**
Descriptors—*Audience Analysis, *Cable Television, Institutional Characteristics, *Mass Media Effects, Position Papers, *Public Television, Television Research, *Television Viewing
Identifiers—Impact, *Public Broadcasting
This assessment of the possible impact of the cable television industry upon public television relies primarily on audience demographic characteristics as a convenient summary indicator and, in many instances, the only kind of evidence available for review. Primary sources of information used were the national Nielsen ratings; mail surveys of American homes conducted by the Electronic Media Tracking Service (EMTS); and a national mail survey of 2,375 homes conducted by the Benton and Bowles advertising agency. Standard industry sources such as CABLEFILE/83, the trade press, and various other audience studies were used to supplement the major sources. Following an introduction, the report includes the following sections: (1) Cable Television (Dimensions of the Cable Industry and Description of Cable Subscribers); (2) Cable Television's Impact on Television Viewing (including Share of Viewing, Number of Channels Viewed, and What Is Viewed on Public Television); (3) Viewing and Evaluation of Cable Programming Services (Types of Cable Programming Services and Pay Cable Services); (4) How Will Cable Program Services Survive? (Premium and Non-Premium Channels, and the Failure of CBS Cable and The Entertainment Channel); (5) Public Television's Survival in a Cabled Nation (including Cable Television's Negative Impact on Public Television); and (6) A Brief Summary and Some Suggestions (Exploiting the Strengths of Public Television, Rejectors of the New Technologies, and Keeping the Mandate Broad). Appendices include public television demographics and a table of satellite-fed basic cable services that accept advertising. (THC)

**APPLE In-Service Programming for Teachers.**
Pub Date—[85]
Note—81p.
Pub Type— Guides - Non-Classroom (055) — Computer Programs (101)
**EDRS Price - MF01/PC04 Plus Postage.**
Descriptors—Computer Assisted Instruction, *Computer Software, *Individualized Instruction, Inservice Teacher Education, *Programing, *Teacher Developed Materials
Identifiers—*Apple II, *BASIC Programing Language
This book is designed to provide teachers with techniques for entering and modifying BASIC programs on Apple computers. The underlying theme is that a teacher need not become a programmer to benefit from being able to use and modify BASIC programs. The key to the successful use of software in the classroom is the ability to individualize software programs and software content and the goal of this book is to demonstrate how BASIC programs can be entered and modified so as to individualize instruction. The programs provided are designed for use with the Apple II series. Specific instructions and short sample programs, each presented in building block fashion, are presented. Programing techniques are introduced via three kernel programs: (1) Math Tutorial; (2) Word Flash; and (3) Games and Graphics. (THC)

**Computer Education. Alaska Elementary Curriculum Guide. First Edition [and] Computer Education. Alaska Secondary Curriculum Guide. First Edition.**
Alaska State Dept. of Education, Juneau.
Pub Date—Aug 85
Note—60p.
Pub Type— Guides - Non-Classroom (055)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—*Behavioral Objectives, *Computer Literacy, Curriculum Design, *Curriculum Development, Curriculum Guides, *Elementary Education, School Districts, *Secondary Education
Identifiers—*Alaska
These two curriculum guides are part of a series intended to serve as a model to aid school districts as they develop and review their own curriculum documents. The guides represent a synthesis of input from many sources, both Alaskan and national. Each guide lists topics/concepts, learning outcomes, and sample learning objectives in three columns. Topics/concepts describe the major parts of the subject under consideration and they define broadly the content to be included in the study of each subject area. Learning outcomes describe in general terms the behaviors students are expected to demonstrate as a result of their learning experiences. Sample learning objectives are indicators of student progress toward the stated goals, i.e., the learning outcomes. Both the elementary and secondary computer education curriculum guides are organized around the topics of computer operation, computer application, problem solving, and computers in society. The elementary education curriculum guide is divided into three sections: grades 1-3; 4-6; and 7-8. The secondary education curriculum guide is intended for grades 9-12. (THC)

Identifiers—*India, *Open University (Great Britain)
Asserting that the traditional system of higher education is not capable of meeting the ever-increasing demands of a developing country such as India, this paper suggests possible alternative methods of

higher education. In addition to in-depth descriptions of the United Kingdom's Open University at Walton Hall, Milton Keynes, and the Regional Study Centres of the Open University at Leeds and London, this paper examines the status of distance education in other countries including Pakistan, Canada, China, and India. Recommending that developing countries emulate the work being done by the Open University in the United Kingdom, the article concludes by emphasizing that this non-formal system is flexible and innovative, can provide a powerful socioeconomic alternative to conventional higher education systems, and has immense potential for correcting some of the existing weaknesses of the current university and collegiate patterns. The paper also suggests reforms in the system of correspondence education in the University of Rajasthan, Jaipur, in the wider context of strengthening and expanding the open university system at the national as well as the state level in India. Identifiers—Alaska
Asserting that advances in hardware technology have outstripped educators' anticipations and that software is the key to the successful use of computer hardware, this paper addresses developments in both hardware and software and discusses possible directions for computer use in education. The first section covers the physical attributes of computer hardware and describes changes in memory, operating systems, storage capacity, and input output devices between 1970 and 1985. The decrease in cost of computing power is also described. The paper then examines software developments and asserts that although improvement in instructional software is slow, it is real and can be expected to continue. Characteristics of software are divided into three categories–subject matter content, instructional process or pedagogy, and technical characteristics–and advances in each of the areas are examined. A nine-item bibliography is included. (THC)

**Interactive Videodisc Technology and Its Implications for Education.**
Pub Date—22 Apr 83
Note—16p.; Paper presented at the Annual Meeting of the American Industrial Arts Association (45th, Milwaukee, WI, April 22, 1983).
Pub Type— Opinion Papers (120) — Speeches/Meeting Papers (150)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—Educational Innovation, Futures (of Society), Information Retrieval, Information Storage, Instructional Design, *Interactive Video, Microcomputers, *Multimedia Instruction, Position Papers, *Videodisks
Arguing that videodisc technology has major implications for the storage and retrieval of information and that it may meet learners' needs in ways never before possible, this paper highlights key points regarding the history and development of videodisc technology, explores its implications for education, and addresses current and future uses of the technology. A review of the development of the videodisc covers: what a videodisc system is; history of the videodisc; technological developments; types of systems (capacitance and optical); features such as recording and storage capabilities; costs; and advantages and disadvantages of videodiscs. A discussion of uses of videodisc technology concentrates primarily on educational applications, and a few comments on the future of videodisc technologies conclude the paper. A list of references is included. (THC)

Identifiers—*Open University (Great Britain), United Kingdom
This paper describes how audiovisual media have influenced the way students have learned–or failed to learn–at the Open University at Walton Hall. The paper is based in part on results from a large body of research that has repeatedly demonstrated the interrelatedness of a wide range of factors in determining how or what students learn from audiovisual media. For instance, the administration's policy toward the assessment of broadcast material will affect not only the way many students approach the programs, but may determine whether or not a student will watch at all; the benefit a student obtains from a program will be affected by how much he has read in the correspondence texts; and that in turn will be influenced by the timing of the TMAs (tutor marked assignments). Primarily a literature review, this paper discusses the following topics: general theory and research relevant to the Open University; the roles of audiovisual media in Open University learning; case studies and documentaries; television as reinforcement; delivery of instruction; students' prior experience with learning from television and radio; student control over audiovisual media; relevance of program material; individual differences; and the need for broadcast notes. An extensive bibliography is included. (THC)

Descriptors—*Distance Education, *Educational Change, *Educational Technology, Foreign Countries, Futures (of Society), *Higher Education, *Nontraditional Education, Open Universities, Politics of Education, Position Papers, Program Descriptions, *Technological Advancement
Identifiers—*Open University (Great Britain), United Kingdom
This position paper explores the potential of new technology to radically alter both distance education and conventional higher education. It hypothesizes that technological developments could even lead to the demise of the conventional campus-based higher education institution by the year 2000. Instead, people of all ages would be able to study at any period of their life through a mixture of home learning, study at work, and occasional visits to "old" campuses, whose primary function by then would be research and curriculum development. It is predicted that the determining factors for the materialization of this scenario will be political and institutional, not technological or even financial. The following sections are discussed in the context of this hypothesis: Print, Television and Culture; New Communications Technologies (Cable Television and Video-Cassettes, Computer Conferencing, and Computer-Based Audio-Graphic Systems); New Institutional Models; and Political and Institutional Barriers. Descriptors—*Communications Satellites, *Continuing Education, Educational Facilities, *Elementary Secondary Education, Higher Education, *Inservice Teacher Education, Program Descriptions, *Staff Development, Telecommunications, *Teleconferencing
Identifiers—*Oklahoma State University, Video Teleconferencing
In 1983, Oklahoma State University (OSU) dedicated a multi-million-dollar Telecommunications Center, equipped with state-of-the-art facilities for the production of live video and audio conferences as well as taped instructional materials. The center was also equipped with a downlink for the reception of programs transmitted by satellite. Unlike many similar facilities, OSU's facilities also included an uplink, a powerful dish capable of transmitting signals directly to a satellite orbiting the earth, for receiving by other facilities. Many teleconferences

have been produced by OSU since 1983, and this paper concentrates primarily on the College of Education's use of satellite teleconferencing for the delivery of continuing education (or staff development) programming for school teachers and administrators. Three staff development teleconferences broadcast by the college during the 1984-85 academic year are described in detail and planning, development, design, and marketing efforts for these programs are discussed. Questions often raised about the quality and value of the interaction possible via teleconferencing, and the advantages and disadvantages of teleconferencing are also discussed. Appended materials include a list of staff development teleconferences planned for the 1985-86 academic year and pricing information for the series. (THC)

**Dysfunctional Anxiety of Clinical Nursing Students: A Guided Design Project.**
Pub Date—20 Oct 84
Note—29p.; Paper presented at the Annual Conference of the International Society for Individualized Instruction (Atlanta, GA, October 20, 1984).
Pub Type— Guides - Classroom - Learner (051) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Anxiety, Course Descriptions, *Course Organization, *Decision Making Skills, Higher Education, Instructional Materials, *Nursing Education, *Teaching Methods, Units of Study
Identifiers—*Guided Design
The 12-hour unit outlined in this document is designed to introduce nursing students in their third semester of an upper division baccalaureate five-semester nursing program to the guided design decision-making process. The unit provides an introduction to interdisciplinary group decision-making language, builds upon the theoretical base of the nursing process, and offers experience with groups, which is essential to functioning in today's health care system. The two selected projects represent nursing situations familiar to the students and are designed to focus on the processes instead of the content. The projects are integrated with group dynamics materials in order to reduce the number of small groups to the ideal for instructor management of the guided design instruction/feedback technique. Small group observation and guided design small group participation are alternated to allow observational and experiential exposure to the guided design decision-making process for each student. It can also be used effectively in large classes. Developed over a 2-year period, this unit has been used with four classes of 40 students each with positive student response. (Author/THC)

Identifiers—*Fernuniversitat (West Germany)
A questionnaire developed in six languages--English, French, German, Polish, Russian, and Spanish--was mailed to more than 1,500 organizations known by the FernUniversitat in West Germany to be connected in some way to distance education, correspondence education, or home study. The study was undertaken as a response to the lack of systematic documentation on distance teaching institutions, and the creation of a databank that would allow easy access to the information was an important goal. The questionnaire was comprehensive and asked for statistical information of a sensitive nature, as well as information on organization, teaching, learning, counselling, examining, student service, and media applications. Useful replies received from 203 institutions included 37 from the United States, 23 from the United Kingdom, 22 from Australia, 16 from Canada, and 15 from the Federal Republic of Germany. The responses were subjected to both quantitative and qualitative analysis and the findings reported in this document provide information on: (1) the organization of distance teaching schools and universities; (2) the media used; (3) general principles of teaching and learning with special reference to the degree of independence expected of distant students or developed by distance education; and (4) student support and examinations. Identifiers—*Alaska
This document provides an overview of Alaska's Legislative Teleconference Network (LTN), which was created to broaden two-way contact between constituents and state legislators through the use of telephone, teleconferencing, and data communications. An executive summary precedes the main report, which focuses on the two entities of the Legislative Affairs Agency (LAA) that administer telecommunication facilities--the Division of Public Services (DPS), which provides information on legislative activity via Legislative Information Offices (LIO's), Legislative Teleconference Centers (LTC's), and Volunteer Teleconference Sites (VTS's); and the Legislative Data Processing center, which is responsible for statewide legislative data communications. Topics addressed include: (1) history and goals of the LTN and DPS; (2) types of facilities and functions maintained by the DPS; (3) equipment leased and owned by the DPS; (4) non-legislative use of the LTN; (5) services of the Data Processing Center within the LAA; (6) equipment leased and owned by the LAA computer network; (7) future plans to improve telecommunication services; and (8) three recommendations resulting from this study. A 16-item bibliography and list of persons interviewed for the report are included. (JB)

One in a series of papers by the Rural Research Agency devoted to the study of telecommunications services and systems sponsored by the State of Alaska, this paper concentrates on the technology of television delivery and distribution to the citizens of the state. It most closely scrutinizes entertainment television, but much of its analysis is equally applicable to instructional telecasts. The study is structured into sections addressing areas of interest including: (1) Satellite Television Today; (2) Technology in the Future; (3) Systems in the Practical Sense; (4) Programming Issues; and (5) The Costs of Alternative Systems. The document contains both an executive summary and individual chapter summaries. The latter are somewhat more specific than the executive summary and contain recommendations developed through research. A bibliography and list of persons interviewed are included. Appendices include lists of commercially and community-owned cable systems in Alaska; a list of communities without commercial television arranged by 1982 population; a partial list of satellite television programs available to viewers in Alaska by type of programming; satellite television program fees; and requests for/complaints about lack of public television service as received by Alaska's four public television stations during 1984. Descriptors—*Educational Change, *Educational Needs, Electromechanical Technology, Electronic Control, *Employment Opportunities, *Futures (of Society), Job Training, *Labor Needs, Lifelong Learning, Man Machine Systems, *Robotics, Skill Development, Technological Advancement
New technologies will produce a radical restructuring of work, including a devaluation of current work skills and the creation of new ones at an ever-increasing rate. The robotics industry provides a prototype for the impact of technology on society, and a context for examining the relevancy of schooling in preparing individuals to function within that society. By examining the context in which education for robotics is occurring, the expanding role of education and the growing variety of institutions providing education and training becomes evident. Five sectors of society provide education-related services pertinent to robotics and the other high technologies: (1) government; (2) education; (3) business/industry; (4) labor; and (5) mass media. Each sector has the primary responsibility for only certain aspects of the educating process, although those functions do overlap. The occupations that are emerging in response to high tech industry needs call for new, essential skills which focus on process rather than subject matter content: critical thinking, problem-solving, creativity, application, synthesis, decision-making, communication, and evaluation and analysis. Those individuals who have the requisite knowledge and skills, with the acknowledgement that they will need lifelong retooling, can look forward to a productive place in our society. As a new technology, as an information technology, as an integration of several technologies, and as a ma-

jor growth industry, robotics can help lead the way for making connections between education, technology, and employment. (JB)

Descriptors—Adjustment (to Environment), Economic Change, *Educational Needs, Employment Projections, *Futures (of Society), *Labor Market, Literature Reviews, Man Machine Systems, *Robotics, Skill Development, *Social Change, Technical Education, *Technological Advancement

This discussion of the influence of robotics on the individual and society addresses three major topics: (1) the current employment picture and future expectations; (2) developments in the robotics industry and their impact on the changing character of work; and (3) the implications of these changes for both society and the individual worker. The impact of the information revolution on the workplace is reviewed, an employment picture for 12 occupations is projected for the year 2000, and additional changes that robotics and other technologies will bring to society are discussed. An overview is given of the impact of robotics on the types of jobs that will be available, the kind of training that workers will need, and the plight of the displaced worker, including predictions of the levels of automation in industry for the years 1985 to 1990. Summaries are provided of five major reports on the social impact of robotics from Carnegie-Mellon University (1981), the Joint Economic Committee (1982), the Office of Technology Assessment (1982), the Society of Manufacturing Engineers and the University of Michigan (1982), and the W. E. Upjohn Institute for Employment Research (1982) respectively. Concluding statements include six recommendations designed to help restore the competitiveness of U.S. industry in the work marketplace that were developed by the National Research Council and the Business-Higher Education Forum, and a brief discussion of ways in which the robotics industry can respond to social change. A 12-item bibliography is provided. (JB)

Identifiers—*Open University (Great Britain)

Although programmed instruction per se has not been used at the Open University (OU), the principles of programmed instruction have heavily influenced the development of systematic instruction and this paper describes the OU instructional development process in the context of seven principles of programmed instruction developed by Lysaught and Williams (1963): (1) student characteristics must be borne in mind; (2) objectives should be defined in operational terms; (3) subject matter should be arranged in a logical sequence of small steps; (4) there must be frequent active responses from students; (5) after each response, students must be able to check the accuracy of their responses; (6) students must be able to work at their own rates; and (7) the performance of students and the effectiveness of the programmed instruction should be evaluated. This discussion shows that, while these principles have influenced course development, they have not gained universal acceptance. Rather, the OU course teams have followed the principles where common sense dictated, and have abandoned them where the positive-rational philosophy underlying the principles appeared to cut across the interests of students. (JB)

Descriptors—Cost Effectiveness, *Distance Education, Foreign Countries, Higher Education, *Institutional Cooperation, Instructional Materials, *International Cooperation, *Material Development, *Multimedia Instruction, Nontraditional Education, Open Universities, Teaching Methods
Identifiers—*Open University (Great Britain)

Co-production occurs when two or more institutions contribute funds and labor to many of the processes of making course components for distance teaching. This paper summarizes reasons for international co-production of multimedia distance teaching courses and provides a lengthy checklist of questions that should be considered before entering upon such co-production. These include: (1) processes by which institutions should seek partners for co-production; (2) criteria for selecting partners; (3) procedures for selection of content and media by co-producers; (4) criteria for selecting content and media; (5) factors that could raise the cost of the co-produced course above that of a course produced by a single institution; (6) bases for evaluating the co-production; and (7) the rights of each contributing institution in making decisions about the course and/or its marketing. The second half of the paper consists of a composite case study based on the Open University experience of international co-production. The paper concludes with three questions regarding the justification for and cost-effectiveness of attempting international co-production of courses. (JB)

**Print, Television and Radio in Education: Principles and Examples.**
Pub Date—Nov 79
Note—26p.; Paper presented at the International Conference on Television, Radio and Print (Turin, Italy, November 29-30, 1979).
Pub Type— Reports - Descriptive (141) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Adults, *Distance Education, *Educational Radio, *Educational Television, Foreign Countries, Higher Education, Instructional Design, Instructional Materials, *Multimedia Instruction, Nontraditional Education, Open Universities, Teaching Methods
Identifiers—Italy, *Open University (Great Britain), *Printed Materials

The first part of this paper summarizes the experiences of the Open University in using print, television, and radio to provide postsecondary education to adults. Descriptions of these three components are followed by details on the functions served by each; i.e., how print, television, and radio differ in their ability to educate, and how the Open University utilizes the instructional strengths of each. Need for integration between the media is discussed, but it is pointed out that this requires careful planning, particularly in the type of courses taught in the Open University. In the second section, alternative ways of combining print, television, and radio for educational purposes are outlined and examples from open universities in various countries are provided. The paper concludes with five questions directed at Italian attempts to combine print, radio, and television for educational purposes. (JB)

Descriptors—*Computer Assisted Instruction, *Cost Effectiveness, *Developing Nations, *Instructional Effectiveness, *Microcomputers, Questionnaires, Secondary Education, Tables (Data), Technological Advancement
Identifiers—*Mexico

Designed to examine the application and cost-effectiveness of computer-assisted instruction (CAI) for secondary education in developing countries, this document is divided into eight chapters. A general introduction defines the research problem, describes the research methodology, and provides definitions of key terms used throughout the paper. Chapter 2 discusses the nature of CAI, including its instructional capabilities and its cost-effectiveness. Chapter 3 provides a review of the literature on the effectiveness and costs of a CAI system in the developed countries. A general description of some educational problems in the Third World, with specific reference to educational poverty, is provided in chapter 4, and chapter 5 discusses the applications of computers in the developing countries. This is followed in chapter 6 by cost estimates for a CAI system as used in a Mexican secondary school. A discussion of the appropriateness of CAI in the developing countries comprises chapter 7, while the last chapter summarizes the research project and lists nine conclusions and five recommendations. Selected references, a sample questionnaire and cover letter, a list of computer manufacturers, and the categorization of selected developing countries by level of computer activity are provided. (JB)

**Computer-Assisted Scheduling of Army Unit Training: An Application of Simulated Annealing.**
Pub Date—Aug 85
Note—28p.; Paper presented at the Annual Convention of the American Psychological Association (Los Angeles, CA, August 23-27, 1985).
Pub Type— Reports - Evaluative (142) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Armed Forces, *Computer Simulation, Costs, Heuristics, *Military Training, Problem Solving, *Scheduling, Systems Approach, Time Management
Identifiers—*Army

This report of an ongoing research project intended to provide computer assistance to Army units for the scheduling of training focuses on the feasibility of simulated annealing, a heuristic approach for solving scheduling problems. Following an executive summary and brief introduction, the document is divided into three sections. First, the Army training scheduling problem is described, with references to specific needs for different types of schedules for different echelons, types of scheduling constraints, time availability, downward inheritance of events and activities prescribed by higher echelons, command priorities, intra- and interschedule compatibility, and input-output requirements for scheduling. Simulated annealing is next introduced as a solution for scheduling problems and its process is described. An application of this algorithm is illustrated via an Army test program written in FORTRAN 77 on a VAX 11/780 computer, which focused on scheduling at the battalion level. A description of the test program (with flow diagram), methods of its evaluation, and a sample run of training schedules for five companies are provided. The third section presents conclusions and recommendations emerging from this application of the test program. Four figures, one table, and a list of references are provided. (JB)

**ITV and Radio Resources in the Defined Minimum Program, 1985-86 Curriculum Guide. A Guide for Use of Instructional Television and Radio Programs Presented over the South Carolina Educational Television and Radio Networks, in Meeting Curriculum Needs in Elementary, Junior High and Senior High Levels of Instruction.**
South Carolina State Dept. of Education, Columbia. Office of Instructional Technology.
Pub Date—85
Note—53p.
Pub Type— Guides - Classroom - Teacher (052)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—*Basic Skills, Curriculum Develop-

ment, *Educational Radio, *Educational Television, Elementary Secondary Education, Resource Materials, State Curriculum Guides, State Programs, Statewide Planning, Teaching Methods
Identifiers—*Basic Skills Assessment Program, *South Carolina
This guide is intended for use by superintendents, district directors of instruction, curriculum writers, principals, and teachers in identifying and selecting instructional television (ITV) and radio resources that will aid their schools in meeting specific instructional requirements of the Defined Minimum Program and continuing objectives of the Basic Skills Assessment Program (BSAP) for South Carolina schools. Resources for ITV and radio are grouped under the following subject areas: (1) language arts; (2) foreign language; (3) mathematics; (4) natural science; (5) social studies; (6) music; (7) health and safety; (8) guidance; (9) education for the handicapped; and (10) substance abuse. Additional ITV subject areas include: environmental studies, computer education, drama and dance, art, fine arts, physical education, driver education, career and vocational education, and home economics. Titles are organized by grade level (elementary, middle-junior high, or secondary), and information for each title includes the curriculum need addressed by the program, series title and grade level, and descriptive comments. Resources having Basic Skills Assessment Program applications are also identified in the comments section. Two tables are provided for referencing ITV and radio resources to BSAP continuing objectives in communications skills and mathematics. (JB)

**The Electronic Dilemma of TV Advertising: Documentation, The Reactions of Business, Cultural Consequences and Consumer Implications. Working Paper No. 2.**
Aarhus School of Business Administration & Economics (Denmark).
Pub Date—Jan 86
Note—79p.
Available from—Department of Marketing, Aarhus School of Business Administration & Economics, Ryhavevej 8, DK-8210 Aarhus V, Denmark (free).
Pub Type— Opinion Papers (120) — Reports - Research (143)
**EDRS Price - MF01/PC04 Plus Postage.**
Descriptors—Audiences, Communications Satellites, *Consumer Economics, *Cultural Context, Foreign Countries, Mass Media, Policy, *Programing (Broadcast), Public Television, Purchasing, *Technological Advancement, Technological Literacy, *Television Commercials, Television Viewing, *Video Equipment
Identifiers—Europe (West)
This discussion of the influence of advertising on the development of new media covers ways in which advertising uses the media and the implications of new information technologies for consumers and marketing activities. The first of four sections describes how television advertising has been altered by the development of new technologies–cable, satellites, and data processing–and outlines the consequences of these technological developments for broadcasters and advertisers. Part 2 explains and demonstrates with empirical data the electronic dilemma of advertising, i.e., how viewers avoid commercials through mental absence, physical absence, channel switching, use of the fast-forward button on videotaped programs, and use of remote control to "zap" commercials. Part 3 describes and summarizes measures taken by the media and advertising industry in the United States and Europe to counteract this dilemma and to exploit new possibilities associated with information technologies. Finally, Part 4, which is written from a European perspective, identifies the cultural consequences and implications for consumers of these countermeasures, and proposes public policy measures to counteract unwanted cultural or consumer consequences. A five-page list of references is provided. (JB)

**Evaluation of the CMI Instructor Role Training Program in the Navy and Air Force. Final Report.**
McDonnell Douglas Astronautics Co. - East, St. Louis, Mo.
Spons Agency—Advanced Research Projects Agency (DOD), Washington, D.C.
Report No.—NPRDC-SR-83-43
Pub Date—Jun 83
Note—48p.
Pub Type— Reports - Evaluative (142) — Tests/Questionnaires (160)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—*Armed Forces, *Computer Managed Instruction, *Evaluation Methods, *Inservice Teacher Education, Questionnaires, Research Methodology, Student Attitudes, Tables (Data), Teacher Attitudes, Teacher Behavior, *Teacher Role, Teaching Methods, Technical Education
Identifiers—Air Force, Navy
A computer managed instruction (CMI) instructor role definition and training package was designed to help CMI teachers acquire the skills necessary to perform seven theoretically-based instructor roles: planner, implementer/monitor, evaluator/provider, diagnostician, remediator, counselor/advisor, and tutor/modeler. Data for the evaluation of the training package were collected from experimental (N=10) and control groups (N=10) consisting of CMI instructors at Naval and Air Force technical training centers. Navy and Air Force instructors in the experimental groups first participated in a 20-hour training program which comprised the 12-module CMI instructor role training package and six group discussions. Air Force instructors in the experimental group also received a 10-hour student motivational skill training package. Following the training sessions, instructors in the experimental groups returned to their CMI learning centers and data were collected on a number of measures during a 3- to 5-month evaluation period. Both quantitative and qualitative findings indicated that the training package met the goal of providing relevant and needed training in Navy and Air Force settings. Instructor training in theoretically-based CMI roles also contributed to more positive student attitudes toward CMI and their CMI instructors, and to generally lower student elimination rates. It is recommended that Navy CMI schools continue to use the training materials as part of their inservice instructor training. A list of references is provided as well as four appendices, which include a description of the CMI instructor role training package, copies of the CMI instructor survey and student attitude questionnaires, and additional group discussion topics for the training package. **Guidelines for Educational Software in California Schools. Revised.**
California State Dept. of Education, Sacramento.
Pub Date—17 Sep 85
Note—15p.
Pub Type— Guides - Non-Classroom (055)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Computer Assisted Instruction, *Computer Software, Elementary Secondary Education, *Evaluation Criteria, Guidelines, Instructional Material Evaluation, *Microcomputers, State Departments of Education, *State Standards
Identifiers—*California, *Software Evaluation
Designed to provide guidance to teachers and other educators with responsibility for selecting educational software, these guidelines for computer software selection are organized into three sections: essential attributes, desirable attributes, and indicators of excellence. The criteria in each section are further subdivided into three subsections–educational content, technical features, and support materials. Educational content relates to the educational materials to be presented and the teaching/learning strategies used. Technical features refers to ease of the program's operation. Support materials are the supplementary materials that teachers and students must have to operate the program. Also included in this document is a section on marketing practices of manufacturers and distributors that should be encouraged by California consumers of educational software. (JB)

Note—52p.; Revised version of a paper presented at the Annual Meeting of the American Educational Research Association (New Orleans, LA, April 25, 1984).
Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—*Computer Science, *Employed Women, Employment Practices, *Equal Opportunities (Jobs), *Salary Wage Differentials, *Sex Differences, Sex Discrimination, Tables (Data), Technological Advancement
Identifiers—Occupational Segregation
This discussion of the impact of new computer occupations on women's employment patterns is divided into four major sections. The first section describes the six computer-related occupations to be analyzed: (1) engineers; (2) computer scientists and systems analysts; (3) programmers; (4) electronic technicians; (5) computer operators; and (6) data entry workers. Utilizing published data as well as the 1/1000 Public Use Samples (PUS) from the 1970 and 1980 U.S. Census, section 2 examines the status of women in the six major computer-related occupations and in high tech industries in general. Section 3 uses the 1980 published data and the 1980 PUS sample to investigate the relative earnings of men and women in three computer-related occupations in high tech and non-high tech industries. Six major findings from the study and their implications are discussed in section 4. It is concluded that women need to be made aware of the channeling that leads them into less prestigious, lower paying occupations or industries, and be helped to develop strategies to counteract this movement; however, at the same time efforts must be made to find ways of making occupations and workplaces more welcoming to both genders and more compatible with satisfying personal and family lives. A list of references and nine data tables are included. (JB)

Descriptors—Analysis of Variance, Comparative Analysis, *Computer Assisted Instruction, *Computer Literacy, Gifted, Hypothesis Testing, Inservice Teacher Education, *Instructional Effectiveness, Intermediate Grades, Junior High Schools, *Microcomputers, Questionnaires, Research Methodology, Student Attitudes, Students, Tables (Data), Teaching Methods
Identifiers—*Alberta
Comparative research was conducted using gifted and average upper elementary and junior high school students to determine the effectiveness of utilizing microcomputers for the development of computer literacy and the implementation of curriculum courseware. Eighty students were selected as the treatment group and received instruction in the understanding and application of microcomputers; 42 students served as the control group and received no direct instruction in the use of microcomputers. A non-equivalent control group pretest/posttest design was used, and analysis of variance was undertaken to interpret the differences in standardized test results between the two groups. Qualitative analysis involved use of questionnaires, focused interviews, and data gathered by external project evaluators. Results indicate: (1) the treatment group (gifted and regular project students) showed more instances of creative thinking on all sub-tests of the Test of Divergent Thinking (TDT) and scored higher on the reading comprehension sub-test of the Canadian Test of Basic Skills (CTBS) than the control group; (2) the computer literacy questionnaire showed major trends toward enhanced literacy for both groups; (3) gifted students in the treatment group learned a greater number of mathematics concepts and expressed a greater degree of satisfaction with programming and graphics activities than did

regular students; and (4) teacher inservice programs were judged to be relatively successful. A list of references is provided and copies of questionnaires used; additional information about the study and descriptive statistics are appended. (JB)

**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Automation, *Computer Software, Database Management Systems, *Educational Researchers, Efficiency, Higher Education, *Job Simplification, *Microcomputers, Technological Advancement, Word Processing
Identifiers—Office Automation, Spreadsheets
There are three valuable types of computer software needed by the professional researcher—word processing, spreadsheet, and database management. In general, these packages are required for the effective operation of offices; however, researchers may have special needs which can only be met with more specialized software. Recently, word processing software has demonstrated new capabilities that will appeal to researchers: (1) online documentation; (2) help screen availability; (3) easy formatting capabilities; (4) simple ways to move and store text; (5) window screens permitting multiple functions; (6) total recall of accidentally deleted text; and (7) mail merging and sorting for multiple mailings. Spreadsheets are a valuable tool for enrollment projections, budget planning and maintenance, basic statistics, and, in conjunction with other programs, for graphically displaying results. When integrated with word processing, these packages can help produce updated reports with minimal retyping. Database management software has some important characteristics that allow the user to custom design forms and report formats; in addition, information can be stored and retrieved easily. An effective program should reduce the overall redundancy of data entry and allow for additional variables to be added in the future. Professional researchers should recognize the utility of microcomputers and initiate their use as a personal tool. (JB)

**Project DISC: Developing Indian Software Curriculum.**
Rapid City Area School District 51-4, SD.
Pub Date—[85]
Note—10p.
Pub Type— Reports - Descriptive (141)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—American Indian Education, *Computer Assisted Instruction, Computer Literacy, *Computer Software, *Curriculum Development, Elementary Education, Instructional Innovation, *Language Arts, Microcomputers, *Reservation American Indians, Teaching Methods
Identifiers—Instructional Effectiveness, *South Dakota
Project DISC (Developing Indian Software Curriculum) was initiated in the Rapid City (South Dakota) school district to improve Native American children's reading and language arts ability and to provide them with microcomputer skills. During the summer of 1982, introductory computer activities were planned, a computer specialist was hired, and workshops were held for teachers in the two most heavily impacted schools, where the first two computer laboratories would be placed. Each targeted child received 30 minutes of computer assisted instruction (CAI) in language arts each school day. Classes were structured at a 60/40 ratio to avoid children being identified as either belonging to a remedial group, or having the CAI labeled a minority activity. All labs were constructed to measure the same things; e.g., time on task, types of software used, and in-house and out-of-house absences. Test scores after the first 6 months of operation were "statistically significant" in one school and "educationally significant" in the other. Currently, four schools contain computer labs and student and teacher reaction to the project has been very positive. Future plans include adding grades K-6 computer literacy component to each of the four schools, implementing many LOGO activities in the curriculum, and purchasing software that deals with higher-level cognitive skills. A list is provided of computer software, microcomputer peripherals, and written materials available in every lab, and a brochure describing Project DISC is appended. (JB)

Identifiers—South Carolina
To follow up an initial statewide computer survey (1983-84), the State Department of Education conducted an investigation of microcomputers and their use in elementary, middle, and secondary schools in South Carolina. The survey was conducted in two phases: an inventory of computer equipment was taken as a component of the Statewide Basic Educational Data System (BEDS) Survey, and a questionnaire, dealing with questions on instructional and administrative uses of computers, funding, and software inventory, was distributed to the 1,120 schools and 92 school districts that participated in the first survey. A total of 1,082 school and 88 district forms were received for a response rate of 97% and 96% respectively. The survey showed that: (1) the total number of computers in schools increased from 4,054 to 6,400 (58%), with 25 brands and 63 models of computers represented; (2) a total of 911 schools now have computers; (3) the student-to-computer ratio improved to 1:94 from 1:149 for the previous year; (4) 54% of the schools have one or two computers, and 14% report having 10 or more computers; (5) Apple remains the most popular computer for instructional purposes, with 3,290 distributed throughout the schools; (6) total funds spent for computer hardware and software almost equaled that spent over the 4 previous years; and (7) the Department of Education Basic Skills Assessment Program (BSAP) Correlation Mathematics Software listing was considered by a majority of schools (62%) in making software purchases. Additional data are provided on the instructional and administrative uses for which computers are employed in the schools of 88 of the state's 92 districts by grade and brand and model of equipment. Identifiers—Alberta, LOGO Programing Language
This study investigated the potential usefulness of a cognitive education intervention approach to improving learning abilities of underachieving Native adolescents. The specific variables considered were: (1) the manner in which this approach may affect cognitive development; (2) academic learning; (3) attitudes towards and interest in academic subjects; and (4) teacher attitudes towards such students. Subjects included 56 Native Cree Indian adolescents who were assigned to experimental (N=38) and control (N=18) groups based on their need for remedial or regular instruction respectively. Pretests were administered to identify underdeveloped cognitive functions and computer literacy was assessed via a computer awareness questionnaire. The experimental group received the intervention program, which comprised an introductory LOGO computer language component; an extended computer component; and reading, writing, and mathematics components. Posttests were then administered to both groups and an analysis of variance was conducted to determine the significance of any differences between the experimental and control groups. Results indicated that involvement in the intervention program did positively affect the experimental subjects' cognitive functioning abilities and improve their achievement in reading and writing; however, teaching for transfer of cognitive functions neither affected the students' attitudes toward academic subjects nor improved their achievement in mathematics. An extensive bibliography is provided, and copies of the computer awareness questionnaire, parent permission slips, and tables of contents for the program components are appended. (JB)

Descriptors—Adoption (Ideas), Case Studies, *Distance Education, Educational Television, Instructional Innovation, *Library Education, Library Schools, *Professional Continuing Education, Teaching Methods, *Teleconferencing, *Telecourses
Identifiers—South Carolina (Columbia)
This study focused on the use of television by the College of Library and Information Science at the University of South Carolina in meeting the preservice and continuing education needs of information professionals in the state. Following a general introduction, which discusses the use of technology in both librarianship and higher education, background information about the College of Library and Information Science's outreach program is provided. A brief history of the use of video in the college is then presented, including the production of the first telecourse, "Jump Over the Moon: Sharing Literature with Young Children," which is currently used by over 230 colleges around the world, and the subsequent adoption of teleconferencing for additional library science courses. Administrative and delivery issues involved with the utilization of television for instructional delivery are also discussed, including: (1) quality control concerns; (2) selection of courses to offer via teleconferencing; (3) faculty resistance and concerns; (4) lack of the social and emotional support provided by the conventional teacher-and-class situation; and (5) follow-up services for the learner. A discussion of concerns and issues involved in teaching adults via telecourses and an invitation for librarians and information scientists to use technology to facilitate information transfer for positive human benefits conclude the report. A six-page list of references is provided. (JB)

**A Look at High School Students and Computers: An Observational Study.**
Pub Date—85
Note—58p.; Paper presented at the Rocky Mountain American Educational Research Association (Las Cruces, NM, October 1985).
Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—Cultural Differences, Interpersonal Relationship, Interviews, *Microcomputers, *Naturalistic Observation, Programing, Qualitative Research, Research Methodology, Secondary Education, *Sex Differences, Student Attitudes, *Student Behavior, Student Subcultures, Teacher Student Relationship, Teaching Methods
A participant observation study was conducted to address socialization, cultural, and values questions related to high school students' interactions with microcomputers. Specific issues addressed included: (1) student social patterns in microcomputer interactions; (2) cultural and sex differences in microcomputer interactions; and (3) student affective responses to microcomputers. Observational study occurred in beginning programming classes and free computer lab periods (before and after school and during lunch) for a period of one semester; student interviews were also used to collect data. Results substantiate previously reported gender differences in enrollment in advanced classes and use of the microcomputer lab outside class time, with the males predominating in those areas. Although female enrollment equaled that of the males

in the introductory level of programming classes, they did exhibit less interest in computer classes, computer use, and computer careers than the males. In addition, the males in gender-mixed groups tended to dominate the keyboard for both typing and input of data. There was a great deal of interaction, primarily academic in nature, related to microcomputers: student-to-student, student-to-teacher, and student-to-microcomputer. Generally, the interaction was open in the classes, but in the noon lab, student-to-student interaction was more evident between/among the "regulars." It is noted that the computer itself is an interactive medium, and that the class structure and student preference for working in pairs/groups further stimulated interactive behavior. A list of references is provided. (JB)

Identifiers—*Australia

This report contains recommendations and guidelines for the development of a national computer education program for all Australian schools. The introduction provides background information on the appointment of the National Advisory Committee on Computers in Schools, including the guidelines and objectives set for it by the government. Chapter 2, the major part of the kit, is the 1983 report by the committee. It comments on the current use of computers in Australian schools and presents a detailed summary of school computing in the various states and territories. Information is also provided on computer developments in the United Kingdom and France, since both have introduced national computer programs. In chapter 3, the committee outlines a rationale for a national program and indicates the objectives that it believes the program should have and the principles that should support its development. Chapters 4 and 5 discuss the components that the committee believes should be incorporated in the program: (1) curriculum development; (2) professional development; (3) support services; (4) software and courseware; (5) hardware; and (6) evaluation. In chapter 6, the committee outlines the administrative arrangements that should apply to the program, and chapter 7 provides a summary of the recommendations made in the report. Appendices include extracts from the Commonwealth Government's Guidelines to the Commonwealth Schools Commission for 1984, a list of committee members and organizations who contributed to the report, recommended professional skills for various groups of teachers, suggestions for the hardware acquisition process, introduction of computers into the school environment, a glossary of terms, statements of dissent, and the response of the Commonwealth Schools Commission to the report. **The Student Video Productions Handbook. A Guide to Planning and Teaching Student Video Productions.**

Pub Date—85

Note—73p.

Pub Type— Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—Course Descriptions, Curriculum Guides, *Production Techniques, *Scripts, Secondary Education, *Student Developed Materials, Teaching Methods, *Television Curriculum, Television Studios, *Video Equipment, Videotape Cassettes

Identifiers—*Video Tape Production

This handbook provides novice video production teachers with a basic course outline containing information, activities, and lessons for use with high school students in an introductory television course. The contents are divided into five major sections: (1) before class begins, (2) preproduction, (3) production, (4) postproduction, and (5) the next step. Topics addressed in section one include the budget, supplies and repair estimates; no frills equipment; monthly video publications; consumer vs. industrial equipment; equipment considerations; optional features; additional equipment; equipment prices; working with video suppliers; back up units; organizing your class; building administrative and community support; concurrent activities; building a videotape library; and suitable student projects. Section two presents an overview of video productions, including preplanning, time, the visual image, the scenario, the draft, and scriptwriting. Examples of scripts with corresponding visuals are provided. The third section includes an equipment checklist and tips on equipment care, shooting techniques, effective lighting, adequate sound, learning to call action and cut, acting for film and video, conducting an interview, planning for variety, and producing commercials, newscasts, and music videos. Twenty-five possible production ideas for videos are also provided. Section four discusses the editing system, videotape, control tracks, rollback, editing techniques, and sound editing. The final section suggests possible uses for completed video projects. (JB)

Identifiers—LOGO Programing Language

This study examined the creative uses of computers in elementary schools and their impact on student's confidence and self-esteem, student-student interaction, student-teacher interaction, male and female students, classroom management, the role of the teacher, special education, teacher training, teachers not involved in the study, and curricular areas such as computer literacy, learning Logo as a programming language, problem-solving and problem-creation, mathematics, oral communication, reading and writing, the arts, and values and the individual and society. Findings are based on intensive examinations of real classrooms over a 2-year period. A total of 433 students in 18 classrooms that involved 13 different teachers were studied; of these, 5 teachers and 40 students were involved in the study for 2 years. Classrooms had 1 to 5 computers over the entire school year, or students had access to a computer laboratory. Logo and word processing were studied extensively; the use of a graphics tablet and Musicland were explored for short periods. Findings indicate that the creative use of computers fosters the development of independent and original thinking and that an environment that encourages exploration leads to extensive social interaction among students; in addition, students become more willing to express, refine, or revise their ideas. A significantly greater proportion of students experienced an increase in their confidence and self-esteem if their teacher was able to give them autonomy over their learning. The impact on students' attention span and cognitive development in the special education classes was also significant. Appendices and selected references are provided. (Author/JB)

Research was conducted to determine: (1) what school districts and schools do to encourage teachers to gain proficiency and use microcomputers in their teaching; (2) how teachers' microcomputer-based teaching practices respond to the actions of districts and schools; and (3) which district and school activities have the greatest incentive value for each of these outcomes. Data were analyzed from an earlier study which described how teachers believed to be "successful" microcomputer users used computers for instruction of mathematics or science at the elementary or secondary level. The final sample consisted of 65 teachers in 49 schools and 25 districts; two-thirds of the teachers taught sixth grade or lower and 52% were female. Results indicate that adequate technical support is the most important determinant of increased integration of microcomputers into regular instruction; in addition, more varied microcomputer use was found when the teacher had a voice in selecting courseware for acquisition by the district. Preliminary findings also suggest that policies and incentives other than technical support play an influential role in stimulating teacher participation, e.g., "intrinsic" incentives, (a computer set aside for teacher experimentation), and "extrinsic" incentives (the possibility of a promotion and a pay raise). Finally, few significant relationships were found between teacher and student variables with support and incentives, on the one hand, and with teaching practices, on the other. A list of references is provided. (JB)

Descriptors—*Adoption (Ideas), Computer Assisted Instruction, Elementary Secondary Education, *Incentives, Inservice Teacher Education, Instructional Innovation, *Microcomputers, *Motivation Techniques, *Positive Reinforcement, Research Methodology, School Districts, School Surveys, *Staff Development, Use Studies

Research was conducted to assess the role of staff development in improving the quality of computer-based instruction in grade K-12 schools. The sample consisted of contact persons in 171 districts and interviews were completed with 155 (91%). Results indicate 80% of these districts currently provide inservice computer training to teachers; the median amount available is 25 hours. Most also provide technical assistance to teachers with hardware problems (95%), locating and evaluating courseware (80%), and integrating the microcomputer into the curriculum (65%). The median number of microcomputers found in these districts is 35, or a ratio of two microcomputers per five teachers and three

microcomputers per 100 students. Incentives for participation in computer inservice training are not common: the most common are commendations or publicity (47%), release time for classes (41%), salary credit (36%), and guaranteed access to microcomputers (35%). The most important incentive was among those least commonly found in this sample--a guarantee of computer access. It was found that traditional incentives dispensed by administrators to teachers have little effect in fostering teacher involvement with computers and distinctions between "extrinsic" incentives such as salary credit and "intrinsic" incentives such as professional recognition did not prove to be conceptually or empirically important. A bibliography is appended. (JB)

Math Works is the fifth grade component of the "Mathematics for the '80s" project, a series of 28 video programs and related material developed by a consortium of state and provincial education and television agencies. A formative evaluation of Math Works programs (9 and 25) was conducted to assess the instructional effectiveness and general appeal of these and other programs in the Math Works series. For Math Works Program 9 ("The Difference between Perimeter and Area"), the sample consisted of more than 400 children, principally fifth graders, in ten schools. For Program 25 ("Dividing Regions into Subregions for Finding Area"), the sample consisted of 107 boys and 83 girls, principally fifth graders from eight schools. Both samples included rural, suburban, and innercity schools. Qualitative data were used primarily to assess the appeal of the programs and to determine needed instructional enhancement; pre- and posttests were used to measure the instructional effectiveness of the programs. T-tests were performed to determine whether student performance significantly increased from the pretest to the posttest. Results indicate: (1) after each program, students' feelings toward mathematics were virtually unchanged; (2) students liked both programs slightly more than they liked mathematics; (3) students fared well on items related only to story line (91.8% correct), although their performance declined on items which asked them to recall the application of a concept within a story (41% correct); (4) results of analysis of variance for sex were inconclusive; and (5) students could identify with the characters in the story, but felt that some dramatic segments were confusing or unrealistic. Appendices contain a list of cooperating agencies, program summaries, and the pre- and posttests. (JB)

Descriptors—Adolescents, *Consumer Economics, *Decision Making Skills, *Economics Education, *Educational Television, *Instructional Effectiveness, *Instructional Material Evaluation, Research Reports, Secondary Education, Skill Development, Student Attitudes, Teaching Methods, Videotape Recordings

"Give and Take" is a series of twelve 15-minute television/film programs and related print materials on economics and consumer economics designed to improve the knowledge and decision-making skills of 13- to 15-year-old students. This paper reviews six separate research studies that help to determine the effects of "Give and Take" on students' knowledge of and attitudes toward economics, and whether teacher training with the program affects students' outcomes. Information provided for each of the studies includes: (1) the major investigative focus; (2) research methodologies; (3) the target population; and (4) study findings. A final section integrates the findings of the studies and draws conclusions based on their results. It is concluded that "Give and Take" is an excellent tool for increasing student economic cognition when used by a teacher with an active teaching style. Furthermore, there is limited evidence that it has a positive influence on student attitudes toward economics and on teachers' attitudes toward teaching economics. Appendices contain a list of instruments used in the six studies and a comprehensive chart of studies reviewed. References are also provided. (JB)

This paper reviews research conducted at the Institute for Social Research at the University of Michigan for the Agency for Instructional Technology as part of "Solutions Unlimited," eight instructional units that integrate computer software, videocassettes, and related print materials. The units are designed to improve the problem-solving skills of students in grades 6, 7, and 8, and to make them familiar with the problem- solving applications of computers. This report on microcomputer use in the middle school summarizes the findings of a national survey (Henry Becker, 1983) and supplements it with case studies of five schools that typify the varieties of use. The focus is on the present--how micros are being used today--and the future--what the teachers and principals think about current applications and what they think will happen in the coming years. An outline of a videotape showing how microcomputers are used in middle schools and guides for principal and teacher interviews are appended. (Author/JB)

Identifiers—*Agency for Instructional Television

Commissioned for use during the design phase of the "Skills Essential to Learning" (SEL) video project, this concept paper makes a number of suggestions for facilitating effective scientific learning. These include: (1) establishing a positive climate for science learning in which the student can ask and pursue questions, change routes, sources and hypotheses, and has the power to say "I don't know"; (2) allowing students to work cooperatively, to build on the efforts of others, to give credit where it is due, and to organize into groups when necessary; (3) fostering of hypothesizing, predicting, observing, locating information, and isolating the problem, to increase general thinking skills while learning the scientific process; and (4) focusing school science on the everyday experiences of students. It is argued that the most essential insight that students should glean from the science programs is that all life, on both a macro and micro level, is interdependent with other life forms, and dependent on the non-living environment, and that these relationships are worldwide. The real challenge is to create a climate in which children's imagination is sensitized to conceive of what the senses do not convey. Essential ingredients for such an environment are mutual respect and patience. (JB)

Identifiers—*Japan

This report outlines the history of non-commercial and local production of audiovisual instructional materials in Japan since World War II, discusses current trends in instructional materials usage, and presents four case studies of materials production at the prefectural level. Topics addressed include: (1) materials production prior to the Second World War; (2) local materials production during the 1950s, 1960s, and 1970s; (3) the diversification of non-commerical audiovisual instructional materials; (4) establishment of the Japan Association of Audiovisual Education in Schools; (5) current trends as seen through the National Non-Commercial Audiovisual Instructional Materials Contest sponsored by the Japan Audiovisual Education Assiciation (JAVEA); (6) production of regional instructional materials by prefectural boards of education; (7) the diffusion of videotape recorders and the production of non-commercial videotape instructional materials; and (8) training programs based upon the "Curriculum Standards for Training in Audiovisual Education." Case studies of production facilities and services for the prefectures of Niigata, Yamagata, Sapporo City (Hokkaido), and Toyohashi City (Aichi) conclude the report. (JB)

**The Pros & Cons of Teaching/Learning by Television.**

Pub Date—Mar 84

Note—11p.; Paper presented at the Meeting of the Eastern Community College Social Sciences Association (Williamsburg, VA, March 1984).

Pub Type— Opinion Papers (120) — Speeches/Meeting Papers (150)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—Administrative Policy, College Faculty, *Distance Education, *Educational Television, Higher Education, Incentives, Information Dissemination, *Teaching Methods, Technological Advancement, *Telecourses, Television Teachers

Learning by television is not a new phenomenon and, as an educational medium, it has gone through some severe growing pains. Unfortunately, while advances in technologies (cable, home recorders, satellites, teleconferencing) have contributed to an increase in the number of telecourses since the mid-1970s, faculty are often unprepared to teach these courses, and the institutions involved may be inadequate or unwilling to support their efforts. The use of telecourses to present instruction has many advantages and disadvantages. The strengths of telecourses include: (1) provision of broader student accessibility to educational opportunities; (2) potential for attracting additional students and income for participating institutions; (3) possible award by ca-

ble companies of a public or educational access channel, which permits greater exposure to the telecourses available; (4) copies of taped materials can be made available to students for review; and (5) more information can be disseminated to students in less time via telecourses than in regular classes. The weaknesses include: (1) lack of continuing contact and interaction between the instructor and the student; (2) the facilitation of student drop-out; (3) some courses are technically aesthetic but lacking in substance; (4) little or no opportunity for questions and feedback; (5) textbooks are often not written for the telecourse; (6) students who register late may not receive course information on time; and (7) problems with scheduling examinations. It is recommended that institutions treat telecourses as viable alternatives to the traditional classroom situation, and that they initiate or modify certain important practices to ensure the success of such courses. Identifiers—Etiquette

Electronic mail and message systems are playing an increasing role in the work performed today, and both the effects and the side-effects of this new communication medium can be substantial. This report discusses a number of issues related to the use of electronic mail and suggests guidelines for its effective use. The report focuses on some important general attributes of electronic mail systems and the effect of those attributes on the quality and appropriateness of communication. Drawing on personal observation of inappropriate or counterproductive use of these systems, it discusses the "etiquette" of sending and receiving electronic mail, and presents some initial guidelines designed to accelerate the process by which social customs and behavior appropriate to electronic mail become established, thereby accelerating the effective use of such systems. The intended audience is persons either possessing some familiarity with electronic mail systems or considering their adoption for individual or institutional use. The guidelines may ease the transition to, and understanding of, this new and quite fundamentally different communication medium. A list of network interest groups and a glossary are included. (THC)

**Using the Microcomputer to Enhance Language Experiences and the Development of Cooperative Play among Preschool Children.**

De Anza Coll., Cupertino, Calif.

Pub Date—Jan 86

Note—33p.

Pub Type— Guides - Classroom - Teacher (052) — Reports - Research (143)

**EDRS Price - MF01/PC02 Plus Postage.**

Descriptors—Child Development, Childrens Games, Classroom Observation Techniques, Cooperation, *Language Acquisition, Language Usage, *Microcomputers, *Play, *Preschool Children, Preschool Education, Research Methodology

Current interest and controversy about the use of microcomputers with young children led to a study of 13 3- to 5-year-old girls and boys enrolled at the De Anza College Child Development Center in Cupertino, California. Designed to determine the effectiveness of the computer in enhancing language experiences and development of cooperative play among preschool children, the study used guidelines intended to maximize the children's participation in social and cooperative play behavior while at the computer. Subjects were videotaped for 6 consecutive weeks as they played at either an Apple IIe microcomputer or two of four non-computer activities: playdough, blocks, art with coloring pens, or a fishing game. Counts were made of language events and cooperative play among the children in both computer and non-computer activities. The results of the study indicate that language activity, measured as words spoken per minute, was almost twice as high at the computer as at any of the other activities. Frequency of cooperative play at the computer and fishing game were comparably high–96% and 98% respectively. Cooperative play at blocks was 27%, at playdough, 14%, and at coloring pens, 8%. Although cooperative play at the computer was slightly lower than at the fishing game, the computer was the only activity that resulted in high levels of both language development and cooperative play simultaneously. Appendices contain a summary of the guidelines and procedures used for the study, a form for evaluating software, and tables and figures. (JB)

Descriptors—*Copyrights, Guidelines, Legal Responsibility, *Policy Formation, Programing (Broadcast), *Public Libraries, Public Schools, School Districts, *School Libraries, *Videotape Recordings

Identifiers—*Fair Use, *Off the Air Recordings

This paper is designed to provide information to librarians in school and public libraries on their legal responsibilities toward video and copyright. The first section discusses the need for preparation of a district-wide copyright policy by teachers, media specialists, and administrators, and provides six suggested ingredients for inclusion in such a policy. Fair use guidelines are explained, as well as situations in which exemption from "home use only" limitations are legal. The second section discusses possible public library concerns regarding the copyright law, with emphasis on the discrepancy between categories of "home use only" and "public performance" videotapes. Three indicators are provided that can be used to determine the category in which a tape belongs, and ways of maintaining good relationships with local area theaters and video rental stores are suggested. Finally, five ways in which librarians and their institutions can keep up with new developments in copyright and video are presented. A 10-item list of references is included. (JB)

Identifiers—*Journalists, *UNESCO

This study presents an overview and analysis of the continuing debate in the United Nations system on freedom of the press and the distribution of information. The three main chapters deal with sequences within that history. The first chapter discusses the debate on Freedom of Information which was pursued, particularly at the United Nations, in the years after World War II; it is based partly on source material collected at that time and documents a little known period of this information debate. The second chapter summarizes the theme of Unesco's work in the field, particularly in the 1970s; its context is the emerging discussion of a new world information and communication order. Finally, the report traces the development of the International Programme for the Development of Communication (IPDC), from its origin to the present day. It is concluded that the most demanding challenge for media policies in democratic countries is providing for a media structure that will ensure the freedom of journalists in relation to both government censorship and the dictatorship of profit. Descriptors—Audio Equipment, *Audiovisual Aids, Humidity, Library Collections, Library Equipment, *Library Materials, *Nonprint Media, *Preservation, *Storage, Video Equipment

Identifiers—*Shelving Practices

Designed to provide the librarian with suggestions and guidelines for storing and preserving audiovisual materials, this pamphlet is divided into four major chapters: (1) Normal Use Storage Conditions; (2) Natural Lifetime, Working Lifetime and Long-Term Storage; (3) Handling; and (4) Shelving of Normal Use Materials. Topics addressed include: temperature and humidity; dangers of sunlight and heat, magnetic fields, and dust; cleaning and maintenance of audiovisual equipment; natural lifetimes of photographic films, recording tapes, and plastics; need for care in handling audiodiscs, photographic film materials, and magnetic recording tapes; and methods of shelving visuals (overhead transparencies, slides, filmstrips, filmloops, and cine films), audio and video discs, audio and video recording tapes (open reel and cassette), and multimedia packs of programs with two or more components. A brief concluding statement and three references are provided. (JB)

Descriptors—*Centralization, *Developed Nations, Library Materials, Library Material Selection, Library Services, *National Programs, *Nonprint Media, *Public Libraries, Visual Aids

Identifiers—Denmark, Netherlands, Norway, Sweden, West Germany

Designed to provide assistance to countries in developing centralized services to their libraries for nonbook materials, this pamphlet contains examples from five countries that have succeeded in establishing such services. Those examples include: (1) "The Central Library Service for AV-Materials in Denmark" (Suzanne Hemmeth Christoffersen); (2) "The Position of Audiovisual Media in the Federal Republic of Germany–Problems and Perspectives" (Wilhelm Wiemers); (3) "National Service to Public Libraries in the Field of Audiovisual Media: The Situation in the Netherlands" (Ed Spruit); (4) "Norway: Audiovisual Media in Biblioteksentralen, Oslo" (Per Chr. Erikstad); (5) "Sweden: The Activities of the AV Section of the Bibliotekstjanst" (Birgitta Malmquist). Information on Danish services includes: review sources, cataloging and classification, publication of talking books, storage equipment, national bibliographic registration of audiovisual materials, other bibliographies and catalogs, microforms, and online searching. The article on Germany discusses records and cassettes, music, video films, and the Supply Centre for Public Libraries (EKZ). Information on the Netherlands includes problems of the public library in integrating audiovisual materials and a description of the services and other activities of the Dutch Centre for Public Libraries and Literature (NBLC). Discussion of Norwegian services includes language courses, music, and use of videotapes in libraries. Finally, Swedish activities discussed include music services; filmstrips, slides and language courses; talking books; and cataloging. Brief biographies of the contributing authors and their addresses are provided. (JB)

Identifiers—Australia, Canada, European Parliament, Great Britain, Scandinavia, United States

This collection of papers on the use of video in libraries is designed to show the many different ways in which video can help communication. After a general introduction by Paul McNally which discusses current trends in video developments, 11 case studies are presented: (1) "Using Video in Public Libraries–Motherwell District Libraries, Scotland: A Case Study" (Norman Turner); (2) "Video and Youth Services in the Public Library–United States Perspective" (Emma Cohn); (3) "Video in Children's Libraries in Sweden" (Anna-Maria Kylberg); (4) "Video Services to Cultural Groups: A London Case Study in Language Development" (Neville Price); (5) "Video in Parliamentary Libraries–Applications and Implications" (Michael R. Mann); (6) "Video in Educational Institutions–Two Examples from Australia: Use of Video in New South Wales Schools" (Martha Heeren) and "Development of the Audiovisual Library Section and Services at Swinburne" (Bill Linklater and Bonna Jones); (7) "The Use of Video in Hospitals–An Example from Great Britain" (Cecily A. Miller); (8) "Video and Library Service to the Deaf–United States" (Phyllis I. Dalton); (9) "Video in Libraries for the Visually Impaired" (William C. Byrne); (10) "FORMAT-Canada's Computerised Information System for Aduiovisual Materials" (Donald Bidd, Louise de Chevigny, and Margot Letourneau); and (11) "Video and Copyright–A Scandinavian Perspective" (Anna Johansen). Brief biographies of the contributors and their addresses are provided. (JB)

Descriptors—Computer Uses in Education, Cost Effectiveness, Curriculum Development, Demonstration Programs, *Educational Improvement, *Educational Technology, Educational Trends, Elementary Secondary Education, Expert Systems, Futures (of Society), *Government Publications, Inservice Teacher Education, Instructional Innovation, Media Research, *Microcomputers, Technological Advancement

Identifiers—Demonstration Schools, *Department of Education

Designed to assist educational decision-makers at the school and district level, this report summarizes the work of the National Task Force on Educational Technology, which was formed in the fall of 1984 to investigate the potential of appropriately integrated technology for improving learning in American schools. The task force used six primary sources of information in generating this report: descriptions of exemplary programs, commissioned papers, letters from educators and private citizens, existing research documents, site visits, and local public meetings. The report consists of eight major sections: (1) Transforming Education; (2) Observations on the Status of Technology in Education; (3) Technology in Education–the Potential; (4) Educational Applications of Technology; (5) Effects on Education; (6) Beginning the Transformation; (7) Recommendations; and (8) Concluding Remarks. Issues addressed include needed reform in pre- and in-service teacher education programs; negative and positive aspects of the use of technology in education; and the potential of such technological devices as personal computers, databases, and expert systems. Five broad uses for technology in education are then identified and discussed, and recommendations are presented to various constituencies (e.g., schools, school districts, state agencies, parents) for implementing strategies regarding planning; financing; teacher education; curriculum and instructional practice; research, development, evaluation and dissemination; and demonstration schools. Conclusions call for the creation of a system in which an individual learning plan permits each learner to proceed at a rate and pace that is challenging but achievable, makes no unjust comparisons with the progress of others, prevents students from becoming passive, and assures positive reinforcement and steady progress. A bibliography and list of the task force members are included. (JB)

Identifiers—Library Development, *Library Services and Construction Act

This collection of six reports was compiled by the Public Library Support Staff of the U.S. Department of Education to disseminate pertinent information submitted by the State Library Administrative Agencies on the Library Services and Construction Act (LSCA) key program areas. Based on data from the fiscal year 1984 LSCA Annual Reports, each report was written by an administrative librarian who has key responsibility for collecting those particular data, and illustrates how LSCA funds were used to provide library services in one of the following areas: Library Services to Physically Handicapped Persons; Library Services to Persons with Limited English-Speaking Proficiency; Library Services to the Institutionalized; Major Urban Resource Libraries and Metropolitan Public Libraries Which Serve as National or Regional Resource Centers; Public Library Construction, LSCA II; and Interlibrary Cooperation, LSCA III. A report on library services to the aging is scheduled to be completed and published separately. (THC)

Identifiers—Apple IIe, *City University of New York York College

This document presents the second portion of a library research exercise developed at York College which uses the Apple IIe microcomputer and word processing software–Applewriter–to teach library research skills. The original disk required students to compile a bibliography. This document, which

contains the textual information found on a supplementary disk, explains the format for various bibliographic entries once the student has gathered the references for the required bibliography. Explanations and sample bibliographic entries in Modern Language Association format are provided for books (reference texts, and books with one, two, or three or more authors) and articles (journals with continuous pagination throughout the volume, journals which page every issue separately, weekly magazines or newspapers, monthly magazines, and daily newspapers). The on-disk instructions for loading the textual segments would have to be modified if a different software package were used. A brief introduction explains the use of the manual. (THC)

Identifiers—*Association of Research Libraries
This Systems and Procedures Exchange Center (SPEC) kit on Bibliographic Instruction (BI) in Association of Research Libraries (ARL) examines current developments as well as anticipated trends based on a SPEC telephone survey of 25 ARL libraries with active BI programs. Two themes which ran through the mid-1985 interviews were the use of new technology in BI programs and the expansion of programs to reach more diverse audiences. The kit contains: (1) BI planning materials from seven libraries (Duke University, Ohio State University, Michigan State University, University of North Carolina, Brown University, Temple University, and University of California at Riverside); (2) three examples of computer-assisted instruction (CAI) programs and microcomputer-based instruction (University of Florida, University of Delaware, and University of California at Berkeley); (3) two descriptions of graduate student instruction (Ohio State University and Colorado State University); (4) one description of international student instruction (University of California at Davis); and (5) a select bibliography. (THC)

**Book Reviews in the Core Journals of Library and Information Science: A Bibliometric Comparative Analysis.**
Pub Date—[85]
Note—38p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—*Bibliometrics, *Book Reviews, Comparative Analysis, Indexes, *Information Science, Library Collections, Library Material Selection, *Library Science, *Periodicals, Position Papers
The core journals of library and information science were identified by overlap of coverage in Library Literature and Information Science Abstracts. Those core journals which review English language monographs in the field and are published by U.S. trade or university presses were identified. Reviews for the 6-month period from July 1, 1984, to December 31, 1984, were examined. Relationships between reviews, publishers of books reviewed, and the review journals are described. Despite the number of reviews of current imprints in American Libraries and Library Journal, the highest yield journals, their percentage of the total reviews published in the core journals would not allow a selector to rely on them alone. Only 32.7% of all 1983 and 1984 titles reviewed were listed in Book Publishing Record. It is suggested that selectors use reviews, announcement services, and publishers' announcements to identify new materials. (Author)

Identifiers—*Colorado
As suggested by a Colorado Academic Library Master Plan developed in 1982, a statewide conference that brought together academicians and librarians was held to explore the role of academic libraries in the information society. People came in teams of three from institutions and included library directors, academic vice presidents, and faculty leaders. This report contains seven papers that were presented at the conference: (1) "Not Cassandra, Pandora, or Polonius: Or, Aspects of Learning in American History" (Harold M. Hyman, Rice University); (2) "The Microcomputer Revolution and the New Role of the Library: From the Perspective of a University President/Chancellor" (Alan Guskin, University of Wisconsin at Parkside); (3) "What a College Administrator Expects of an Academic Library" (Robert A. Plane, Clarkson College of Technology); (4) "Raising Levels of Astonishment: Criteria for Academic Library Leadership" (Robert C. Spencer, Sangamon State University); (5) "Confessions of a Former Scenic Designer" (Richard Knaub, University of Colorado at Boulder); (6) "How the Library Helps Me as a Teacher and Researcher" (Paul A. Lacey, Earlham College); and (7) "Using the Library to Teach History at the United States Air Force Academy" (Carl W. Reddell, U.S. Air Force Academy). Background information on the conference and a definition of information literacy introduce the papers. (THC)

Identifiers—Information Resources Management, *Records Management
A privately sponsored and privately funded committee was organized to identify and propose means by which governments at all levels might rid themselves of needless and wasteful records while ensuring the preservation of that fraction of the documents deserving to be kept. The committee concentrated on problems and solutions within the federal government, but the principles underlying the conclusions and recommendations can be adopted by individual states and localities. This report of the committee includes an introduction and sections on: Development of Records Management; Records Management 1950-1984; Computer Generated Records; Special Characteristics of Electronic Records; Information Resource Management; and Importance of Leadership. Five major conclusions and three detailed recommendations complete the report. A draft of a proposed executive order is attached as well as a list of participants and additional interviewees. Appendices include overviews of the government records programs and conservation efforts, a technology assessment report of the National Archives and Records Service, and additional information, including significant related legislation and regulations; selected surveys and studies; elements of a comprehensive government records program; principles for state archival and records management agencies; National Archives and Records Service appraisal guidelines; and examples of federal government records schedules. An index is provided. (THC)

**Comparative Analysis of Monographic Collections in Nursing.**
Pub Date—31 Jan 85
Note—67p.
Pub Type— Reports - Research (143)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—Academic Libraries, *Cataloging, Comparative Analysis, Higher Education, *Library Collection Development, *Library Collections, Library Cooperation, *Medical Libraries, *Nursing, Nursing Education, *Periodicals, Union Catalogs
The results of a project comparing the nursing monograph collections of academic health science center libraries in the Southwest are reported. Records for nursing monographs from the TALON (South Central Regional Medical Library Program) Union Catalog of Monographs from 1977-1983 were analyzed to reveal the distribution by year, publisher, and subject of titles cataloged during that time period. Overlap between library collections was analyzed showing that overlap does increase over time. The effects upon overlap of both cataloging practices of individual libraries and the number of years of cataloging studied are discussed. Various methodologies used for overlap studies are compared, and implications of the results of the study for academic nursing collections are discussed from the viewpoints of the nursing faculty, the student user, and the librarian. Identifiers—*China
This overview of continuing education in the People's Republic of China since 1949 delineates its history, describes its current practices and needs, and discusses its future prospects. The paper opens with a discussion of the term "continuing education"; in China, adult education or spare-time education are the usual nomenclature. A historic background of China's library education system precedes a discussion of the urgent need for a supplementary form of education for professional and non-professional staff members. Five types of available continuing education courses are described: (1) advanced study at regular universities; (2) attendance at spare time schools; (3) short training courses; (4) on-the-job training; and (5) correspondence courses. It is noted that correspondence courses are currently the most important and preferred mode of instruction, and their advantages and disadvantages are discussed. A discussion of the future of library science continuing education in China to the year 2000 concludes the paper. (THC)

**Dewey Decimal Classification Online Project: Evaluation of a Library Schedule and Index Integrated into the Subject Searching Capabilities of an Online Catalog. Final Report.**
OCLC Online Computer Library Center, Inc., Dublin, Ohio.
Spons Agency—Council on Library Resources, Inc., Washington, D.C.
Report No.—OCLC/OPR/RR-86/1
Pub Date—28 Feb 86
Note—505p.; For an interim report, see ED 266 805.
Pub Type— Reports - Research (143) — Tests/Questionnaires (160)
**EDRS Price - MF02/PC21 Plus Postage.**

Descriptors—Academic Libraries, Classification, Databases, Display Systems, *Information Retrieval, Information Systems, *Library Catalogs, Library Research, *Online Catalogs, *Online Searching, *Online Systems, Public Libraries, Relevance (Information Retrieval), Research Libraries, Search Strategies, *Subject Index Terms
Identifiers—*Dewey Decimal Classification

In this research project, subject terms from the Dewey Decimal Classification (DDC) Schedules and Relative Index were incorporated into an online catalog as searcher's tools for subject access, browsing, and display. Four features of the DDC were employed to help searchers browse for and match their own subject terms with the online catalog's terminology: (1) subject terms in the DDC Schedules; (2) hierarchical arrays of related terms in the DDC Schedules; (3) subject terms in the DDC Relative Index; and (4) class numbers in the DDC Schedules and Relative Index. The effectiveness of the DDC in an online catalog was tested in online retrieval experiments with library patrons and staff at the Library of Congress, the New York State Library, the Public Library of Columbus and Franklin County (Ohio), and the Mathematics Library of the University of Illinois at Urbana-Champaign. The research findings chiefly address subject searchers' use of a library classification in the information retrieval environment of an online catalog. These findings provide insight into searchers' problems with online displays of the DDC Schedules and Relative Index, bibliographic record displays enhanced with subject information from the DDC, and online catalog capabilities necessary to support searching, displaying, and retrieving library cataloging and classification information. As a research project studying online catalog use, the DDC Online Project furthers general knowledge of library patron use of online catalogs, regardless of the extent to which these catalogs have been enhanced by a library classification. Descriptors—*Academic Libraries, Databases, Foreign Countries, Higher Education, *Instructional Materials, Library Cooperation, *Library Services, Library Surveys, *Online Searching, Online Systems, Program Descriptions, *Publicity, Research Libraries, Search Strategies, *Users (Information), User Satisfaction (Information)
Identifiers—Canada, United States

In mid-1985, researchers contacted librarians at 23 United States and Canadian universities to determine what end-user activities were taking place with the involvement and cooperation of the library. Although most of those contacted were members of the Association of Research Libraries (ARL), a few non-ARL libraries known to have active end-user programs were also called. This Systems and Procedures Exchange Center (SPEC) kit contains information on the SPEC telephone survey (questions asked and libraries contacted); one grant proposal (University of Illinois); five program descriptions (Cornell University, Memphis State University, Pennsylvania State University, Texas A&M University, and University of Pennsylvania), four examples of publicity (same libraries as above except for Pennsylvania State); nine sets of instructional aids and references tools (same libraries as program descriptions–two items from Pennsylvania State–plus Drexel University, Johns Hopkins University, and University of Ottawa); six evaluation/questionnaires (Cornell, Drexel, Memphis State, Pennsylvania State, and Texas A&M Universities, and University of Ottawa); and a select bibliography. A brief introductory summary covers planning and implementation of end-user searching programs; types of support programs; appraisal instruments to measure patron satisfaction; and trends and needs. Pub Type— Guides - Classroom - Learner (051)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Academic Libraries, *Federal Government, Higher Education, Information Seeking, *Library Instruction, *Library Skills, *Public Administration Education, Public Health Legislation, Public Policy, *Reference Materials, Workbooks
Identifiers—*Auburn University AL

This work is designed to help introduce students in the Master of Public Administration program at Auburn University to the major types of research material that are available in the Ralph Brown Draughon Library. The exercise simulates a typical research process by posing a series of questions about a specific issue in the public administration field, namely the development and implementation of federal government policy on health maintenance organizations (HMO). The questions involve the identification and use of relevant books, articles, dissertations, hearings, reports, statutes, regulations, and court cases. A list of appropriate library reference tools and an answer key accompany the exercise, which is administered following an introductory lecture-tour. The average time required to complete the assignment is approximately five hours. (Author)

Descriptors—*Academic Libraries, Higher Education, *High School Students, *Information Needs, Library Research, *Library Services, Position Papers, Questionnaires, *School Libraries, Surveys
Identifiers—*Georgia

Academic librarians report that use by increasingly large numbers of high school students is creating pressures in budgets, staff, and materials. Indications are that these demands will increase: students are increasingly sophisticated in their information needs; they are mobile; and school library media centers' collections have been weakened by diminishing funds, increased price of materials, and increased censorship. At the same time, the ability to search library catalogs and databases such as DIALOG from remote locations via terminals increases awareness of resources. High school students can readily obtain lists of relevant sources, but these sources are usually found in the academic library. This research study was designed to answer two questions: How do academic library directors perceive library use by high school students? and Why do high school students come to academic libraries, when do they come, and what do they do when they get there? Questionnaires were mailed to 32 Georgia academic library administrators and distributed to 385 high school students using these institutions during a 2-week period. Administrators reported that service to these students was seen as part of the university recruiting efforts, and identified unreturned materials and undefined reference resource needs as the two most serious problems. Students indicated they used the university library instead of the school library because the collection was superior, the library was more convenient, and they preferred the service offered. Identifiers—Course Integrated Library Instruction, *Pennsylvania State University

Designed to acquaint Pennsylvania State University students at the Delaware County Campus with the facilities and resources of their library, this workbook on library skills is used in conjunction with English 15, and its mandatory completion is incorporated in the final course grade. It is organized into exercises dealing with types of materials rather than by area of the library. Each exercise has an introductory section explaining the materials covered, followed by a set of questions to be answered individually by students. Specific areas covered include dictionaries, encyclopedias, Library of Congress subject headings, the online catalog LIAS (Library Information Access System), book review indexes, biographies, the Library of Congress classification system, periodical indexes, the periodical holdings list, newspaper indexes, almanacs and statistical sources, government documents, formats for citing materials in bibliographies, and a checklist for developing a search strategy. Floor plans, examples of catalog cards and other forms, and a list of objectives for each chapter are included. (THC)

Identifiers—*UNISIST

Within the last few decades there have been significant initiatives to establish and develop international programs and systems to facilitate access to the information resources of cooperating countries. A program of the United Nations Educational, Scientific and Cultural Organization (Unesco), UNISIST was designed to encourage and coordinate the development of a flexible and loosely connected network of information services based on the voluntary cooperation of participating nations. This paper briefly traces the historical evolution of UNISIST, particularly in relation to the changing focus of its objectives, and includes a reasonably comprehensive bibliography of UNISIST and its activities. The 304 bibliographic references were collected by searching several pertinent indexing and abstracting journals, a bibliography of Unesco publications, and the ERIC database. The citations are predominantly for articles written in the English language, although some foreign works are included. Each citation includes the principal personal author or corporate author, date of publication, title, and journal/report data. A keyword subject index and a list of abbreviations used in the bibliography are included. (THC)

The materials selection policy of the public services division of the Maine State Library analyzes the statutory language under which the library operates, and incorporates the requirements of that language into a broader framework of demand, collection quality, and long term value. Collection development is discussed by Dewey class, followed by paragraphs on the Maine Author Collection, ver-

tical files, maps, audiocassettes, periodicals, and state and federal documents. A gift policy is outlined, and the policy concludes with a statement on challenged materials, the texts of "Library Bill of Rights" (1980) and "Challenged Materials: An Interpretation of the Library Bill of Rights" (1981), and the Maine State Library form entitled "Citizen's Request for Reconsideration of a Book" (1982). **Today's Libraries. A Resource Guide for Teachers.**
Ventura County Superintendent of Schools, Calif.
Pub Date—[84]
Note—45p.; Developed by staff from the Thousand Oaks Library, Ventura County Library Services Agency, and the Ventura County Superintendent of Schools, Curriculum Department.
Available from—IDEA Factory, Building 174, 275 Pleasant Valley Road, Camarillo, CA 93010 ($1.50).
Pub Type— Guides - Classroom - Teacher (052)
**EDRS Price - MF01/PC02 Plus Postage.**
Descriptors—Elementary Education, Guidelines, Instructional Materials, Library Cooperation, *Library Instruction, *Library Materials, *Library Skills, *Public Libraries, *School Libraries
This resource guide was developed to provide teachers with ready-to-use activity sheets and suggested discussion topics to teach basic skills students need to use both school and public libraries effectively. Several assumptions were made in developing the guide: students can read at their grade level (although most materials are easily adapted); students know the parts of a book; all materials are housed in the library according to a logical system; and students understand an author's inverted name. Based on these assumptions, the guide includes a variety of teaching aides to help with instruction on how to use a card catalog, microfilm catalog, and computer online catalog. Students receive decoding tips for information found on various types of entries and gain a basic understanding of library terminology. The materials are classified by grade levels, 2-3, 4-6, 6-8, followed by two separate glossaries of vocabulary appropriate for the various levels. A list of suggested independent activities which can be adapted to any grade level is included. A bibliography of recommended supplementary sources concludes the document. (THC)

**Censorship in Louisiana Public Libraries.**
Pub Date—Dec 85
Note—54p.; Master's Project, University of Southern Mississippi.
Pub Type— Reports - Research (143) — Tests/Questionnaires (160)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—*Censorship, Freedom of Speech, *Intellectual Freedom, Library Research, Library Statistics, Library Surveys, Moral Issues, *Public Libraries, Questionnaires
Identifiers—*Louisiana
A survey was conducted to determine the level of censorship in Louisiana public libraries. A questionnaire based on a previous survey done by Show Me Libraries in 1982 was sent to 30 public libraries chosen from the northern and southern sections of the state on the basis of population parameters. Surveys were returned from 27 public libraries. Statistics for the responses are discussed and presented in graph form. Sixteen of the 27 surveys returned reported there were censorship problems in their libraries; 11 stated there were no problems. Findings indicated that, while there have been a number of censorship attempts within Louisiana in the last three years, most of the censorship has taken place in the northern portion of the state; methods for dealing with censorship vary greatly; individuals complained and attempted to exercise censorship more than groups such as political, civic, and religious organizations; and books on the subject of sex were the most highly censored. Suggestions for future research conclude the report. A historical background of censorship introduces the survey report, and the censorship survey instrument and cover letter and the American Library Association's "Library Bill of Rights" are appended. **Clear Purpose...Complete Commitment. A Long-Range Program to Provide Louisianians with Library and Information Services Adequate to Their Needs, 1985-1989.**
Louisiana State Library, Baton Rouge.
Pub Date—85
Note—82p.
Pub Type— Legal/Legislative/Regulatory Materials (090) — Opinion Papers (120)
**EDRS Price - MF01/PC04 Plus Postage.**
Descriptors—*Information Needs, *Information Services, Libraries, Library Cooperation, Library Networks, Library Planning, *Library Services, *Long Range Planning, *Public Libraries, Shared Library Resources, *Statewide Planning
Identifiers—Library Services and Construction Act, *Louisiana
This long-range program results from the combined efforts of the State Library staff, the Library Services and Construction Act (LSCA) Administrative Librarian, Louisiana librarians, the Library Development Committee of Louisiana, and a number of other formal and informal planning groups within the state. The program includes: (1) an assessment of the general population and environments of Louisiana with corresponding library service needs; (2) an assessment of the status of library needs of special populations identified in LSCA legislation, including the disadvantaged, institutionalized, blind and physically handicapped, and persons with limited-English speaking ability; (3) an assessment of major library programs throughout the state, including criteria of adequacy, status, and needs; and (4) a plan of action with measurable objectives to meet identified needs over the next 5 years. This publication identifies specific inadequacies in public library services, resources, facilities and personnel; it identifies the people who are to be served; and it reveals geographical, sociological, economic, and educational barriers to the expanded use of libraries. Descriptors—*Community Resources, Community Satisfaction, Community Services, *Library Cooperation, *Library Services, Position Papers, Program Descriptions, *Public Libraries, *School Libraries, *Shared Library Resources
Identifiers—*Vermont
This review of the current status of combined school-public (community) libraries in Vermont acknowledges that, while on the surface the concept appears to be just the answer for many communities with limited funds and other resources, it also raises many questions about the nature of library service to a community. The paper provides: (1) a brief history of the development of community libraries from the early 1970s to the present; (2) a list of the current community libraries; (3) the positive and negative aspects of having a community library; (4) actions a public library board should take if they are considering development of a community library; and (5) an annotated bibliography of seven works on community library failures and successes in the United States and Canada. **The Community of the Book. A Directory of Selected Organizations and Programs.**
Library of Congress, Washington, DC. Center for the Book.
Report No.—ISBN-0-8444-0525-6
Pub Date—86
Note—123p.; For 1984 report, "Books in Our Future," see ED 253 243.
Pub Type— Reference Materials - Directories/Catalogs (132)
**EDRS Price - MF01/PC05 Plus Postage.**
Descriptors—*Books, Censorship, Directories, *Literacy, *Literacy Education, *National Organizations, National Programs, *Publishing Industry, *Reading Skills, Technological Advancement
This is a selective listing of organizations that promote books and reading, administer literacy projects, and encourage the study of books. Expanding on a brief list of organizations in the 1984 Library of Congress report, Books in Our Future, it focuses on national programs of special interest to the Center for the Book in the Library of Congress. The emphasis is on organizations in the United States, where recently there has been renewed interest in educational reform, in literacy, and in the future of the book. Alphabetically arranged, the entries provide addresses, telephone numbers, and contact persons for the organizations; general descriptions of their purposes; examples of their activities; the names of their publications; and a description of how they are funded. This information is based largely on materials that were provided by the organizations and programs themselves. Shared areas of interest include reading skills (the problem of illiteracy) and reading motivation (the problem of aliteracy); the state of the book industry; books and technology; the potential complementarity of books and the media; censorship; the history of books; and the international role of the book. Publishers, booksellers, librarians, book researchers, scholars, teachers, and writers are among those represented in this directory by a selective listing of their professional associations. An introduction by John Y. Cole entitled "Is There a Community of the Book?" opens the directory. (THC)

Identifiers—*University of Hawaii
This study is designed to identify the computer competencies that should be required of library/information studies (LIS) graduates of the Graduate School of Library Studies (GSLS) at the University of Hawaii at Manoa. The long term objective of the study is to provide information for the policy and planning of GSLS. The study examines how certain aspects of the understanding of, use of, and attitudes towards the new information technologies are perceived by faculty and graduating students. A review of the literature covers computer literacy, competencies for the library/information science professional, curriculum trends in library/information science education, and the use of computers and information technologies in the library/information science field. Two self-administered questionnaires–one for faculty and one for graduating students–were distributed to the entire faculty (N=9), and all students graduating in the spring or summer semesters of 1985 (N=21). Individual items on the two questionnaires were grouped in the areas of computer knowledge, skills or experience, and attitudes. The Statistical Package for the Social Sciences (SPSSx) was used to analyze the results of the questionnaires. Individual chapters present the research problem; the literature review; the research methodology; the results of the survey; discussion and recommendations; and conclusions. Numerous tables are included throughout. A bibliography, the survey instruments, and GSLS curriculum content statements and course descriptions are attached. (THC)

This presentation at a seminar for library staff and students describes the Educational Resources Information Center (ERIC) system as an information system designed to provide users with ready access to primarily English-language literature dealing with education by establishing a database, publishing abstracting journals, and reproducing documents in printed and/or microfiche formats. The document includes a description of the organizational composition of ERIC; information on searching ERIC both manually and online; a brief discussion of search strategy development; a description of the format of the two printed abstracting journals, Current Index to Journals in Education (CIJE) and Resources in Education (RIE); estimated costs of computer searches; and procedures for requesting an online search at the Institute of Education Library (IE), Singapore. A brief summary of the results of pre- and post-seminar questionnaires administered to 50 staff and student participants in the staff interaction seminar concludes this document. Appendices include a list of the 16 ERIC clearinghouses with their two letter codes; a sample online search strategy; sample online output; and copies of the pre- and post-seminar questionnaires with tabulated results. These remarks suggest that, although the world's cultures–and the culture of books–may be defined by languages, by traditions, and by historical movements, they are not confined by national boundaries: all boundaries in the world of culture and ideas are artificial and all are doomed to be dissolved. Since all culture belongs to all people, books and ideas create a boundless world, and librarians of the world are servants of an indivisible world. To keep that world indivisible is the most urgent and most difficult task for librarians. Political, economic, or military chauvinists who would like to make libraries narrowly national, and ideologues who try to sanitize the books that are published, are the enemies and saboteurs of the work of the world's librarians. The Library of Congress (LC) is attempting to serve an indivisible world of culture and books and ideas: only about one-quarter of the library's books are in English, while three-quarters are in the other languages of the world. In collecting and preserving other cultural objects–photographs, graphic art, motion pictures, music, and maps, LC tries to display the full spectrum of the cultures of mankind. Despite the cost and time-consuming nature of this effort, LC does not allow itself to be confined by the cultures of Europe and the West. (THC)

Descriptors—Annotated Bibliographies, Developing Nations, Information Processing, *International Cooperation, International Organizations, Library Automation, *Library Cooperation, Library Education, *Library Science, *Library Services
Identifiers—*International Librarianship
For the purpose of this bibliography, international librarianship focuses on the role of information in society, and the methods of its acquisition, processing, retrieval, and dissemination across national boundaries by means of international library cooperation through the formulation and development of common standards, policies, and practices. Comparative librarianship, on the other hand, studies library systems within the context of geographical areas, regions, or individual countries in order to improve libraries and library services throughout the world. Most of the approximately 125 entries in the bibliography were published between 1970 and 1986. The entries are organized under the following subject headings: (1) International Librarianship/Comparative Librarianship; (2) International Organizations/International Associations; (3) International Programs; (4) Standards; (5) Library Services; (6) Cooperation; (7) Automation; (8) Professional Education; (9) Developing Nations; and (10) Libraries Throughout the World. Some items are annotated. (THC)

Identifiers—*Pacific Northwest
This 1984-85 statistical survey of libraries at four-year colleges and universities, two-year colleges, law libraries, and miscellaneous academic institutions in the Pacific Northwest provides relevant data for comparison and inventory purposes. A total

of 98 institutions responded to the questionnaire, which was administered by the Pacific Northwest Library Association (PNLA). Although the current questionnaire follows past practice in order to provide comparable data, some changes have been implemented. Questions dealing with online interlibrary loan capability were omitted and several questions relating to usage were added; i.e., circulation figures, reference transactions, gate counts, bibliographic instruction statistics, database transactions, and hours of service. Divided by type of institution, data tables include but are not limited to the following topics: (1) rank by collection size; (2) volumes held as of June 1985; (3) volumes per full time student; (4) growth rate; (5) total microform units; (6) audiovisual units (broken into categories); (7) government documents; (8) number of items borrowed; (9) current serials; (10) total library operating expenses; (11) professional staff; (12) non-professional, non-student staff; (13) number of male/female professional staff; (14) number of hours in professional work week; (15) beginning professional salaries; and (16) director's salaries. The survey instrument, instructions for completing the questionnaire, and an index to respondents are included. (THC).

Descriptors—*Communication (Thought Transfer), *Documentation, Guidelines, *Information Scientists, *Librarians, Position Papers, *Technical Writing
This publication is one in a series of booklets designed to provide basic, practical guidance to information workers and students. It is intended to assist information workers (i.e., librarians, information scientists, archivists, indexers, bibliographers, database managers, information officers–and many other titles by which these workers are known) and those training to be information workers, who are required to write reports on such topics as student projects, research, professional or personal development, financial matters, system evaluations, departmental activities, meetings, and personnel. Guidelines for the production of reports in a variety of information-oriented environments are suggested; in most cases the principles are the same no matter what the context. Background and suggestions are set out within a perspective which looks first at the report as a form of written communication, then at the identification of purpose, topic, and message. Structure and content are then examined, together with the selection of appropriate style, language, and tone. Methods and problems of copy preparation and reproduction are reviewed and the special characteristics of reports for particular purposes are highlighted. The concluding chapter deals with the distribution of the finished report. A list of references is included and an index to the complete text is provided. (THC)

Identifiers—*Nebraska
An overview is provided of the historical development, organizational structure, and programs and services of the Nebraska Technical Community College (TCC) System. First, statutory provisions establishing the TCC system and defining its priorities are cited, explaining that the system was established to create locally governed and supported technical community college areas with the major educational emphasis on occupational education. Next, the historical development of the TCC system is traced, explaining the present system's evolution from three separate sources: two-year junior colleges, state vocational/technical colleges, and area vocational/technical schools. The next section focuses on the TCC's organizational structure, noting that the organizing principle of the system is local control and that the six TCC Areas are independent political subdivisions responsible directly to the State Legislature. This section also explains the role of the State Board for Technical Community Colleges and the Nebraska Technical Community College Association in providing statewide coordination. Finally, the paper examines the programs and services of the TCC system. The three major roles of the system (i.e., vocational technical programs and non-degree occupational education; general academic transfer programs; and avocational recreational courses) are highlighted, along with other special roles (i.e., remedial programming, including adult basic education and general educational development; general education; economic development activities, such as customized job training, retraining, and upgrading; and in-depth academic and career assessment and counseling). In response to a legislative request, this report provides a compilation of information about full- and part-time faculty, and teacher salaries and benefits in the Nebraska Technical Community College Areas. The compilation includes data in varying degrees of detail from each college. For Central Community College, figures are provided for numbers of full- and part-time, vocational and academic faculty, total salary/benefit expenditures for full- and part-time faculty, and starting salary for full-time faculty. For Metropolitan Technical College, a 1985-86 salary schedule, charts showing minimum criteria by level for initial appointment and subsequent promotion, and a list of instructor salaries by division are presented. Data for Mid-Plains Technical Community College Area include, for each discipline, number of full- and part-time instructors, full- and part-time salary, salary range, and number of academic and vocational instructors. For Northeast Technical Community College, tables list total salary for each instructional program; and daily and annual salary, starting date of employment, educational attainment, and teaching and occupational experience for each faculty member in each instructional program. Tables related to Southeast Community College provide information on number of employees, salary, and benefits by employee classification, individual faculty and non-faculty salaries and benefits by program. Finally, a salary schedule and fiscal year 1985-86 projections for Western Technical Community College area are provided with respect to number of full- and part-time, academic and vocational faculty and total expenditures for salaries/benefits for full- and part-time, academic and vocational faculty. A study was conducted at Piedmont Virginia Community College (PVCC) to provide a profile of the characteristics and academic performance of PVCC students in developmental reading and writing courses. Specifically, the study focused on student demographics, performance in developmental courses and college-level English courses, and the relationship between performance in developmental courses and college courses. Data from the transcripts of 191 students who took at least one developmental course during fall 1981 were analyzed. Study findings included the following: (1) 62% of the sample group were under 22 years old, 86% matriculated within 1 year of their target year, and 50% were female; (2) almost 50% came from the three high schools closest to PVCC, and 83% were Virginia residents; (3) blacks accounted for 8% of the total PVCC student population, but 27% of the developmental students; (4) curricular choices remained fairly stable from matriculation to the end of the student's course of study; (5) 41% of the group were in good academic standing at the end of their course of study, 30% were on academic warning status, 13% were on probation, and 13% took no college-level courses; (6) over 50% of the students who took developmental courses eventually took college-level courses; (7) 74% of the students who received a satisfactory final grade in their developmental course went on to take a college-level course, as opposed to 40% of those who received a final grade of "repeat"; and (8) 47% of those who received a satisfactory developmental course grade received an A or B in their first college-level course. In recognition of the 25th anniversary of University College (UC), the first public two-year college in Ohio, this report presents an overview of the history and contributions of the college; a description of its students, student services, technical and transfer programs, developmental education programs, and community relations; and a discussion of issues for the future. Section 1 provides an introduction to the report; section 2 offers information on UC's heterogeneous student body, including an examination of students' academic preparation, enrollment trends, and student demographics. Section 3 discusses support services for students, such as counseling, orientation, career planning, and placement services provided by the Student Services Division, and other support services offered by the Center for Developmental Education, the Computer Assisted Instruction laboratory, and the Faculty Advising Resource Center. Section 4 highlights the technical programs offered by UC, their impact on the curriculum, problems of financing and enrollment, and the need for planning. Section 5 reports on the transfer programs, their curricular problems, the grade point averages of their students, and their rates of success. Section 6 focuses on UC's considerable investment in developmental education, underscoring the importance of having developmental education integrated with other academic departments. In section 7, UC's relations with the community are explored, highlighting efforts to provide retraining and educational service to business and industry. Finally, section 8 details issues for the future, including those related to institutional values, image, and enrollments. (RO)

Identifiers—*Saddleback College CA
A study was conducted to determine what proportion of Saddleback College (California) students were willing to take afternoon classes and their preferred class times. A random sample of 2,600 students registering for the spring 1986 semester was asked to complete a questionnaire. Study findings, based on 1,308 usable responses, included the following: (1) 58.8% of the sample indicated that they were willing to take afternoon classes; (2) males and females showed equal willingness to take afternoon classes; (3) students under 20 years of age were the group least willing to take afternoon classes; (4) the majority of the students interested in afternoon classes preferred 3 unit courses to be scheduled in two 1.5 hour sessions; (5) 3-hour class sessions were most popular with students in their 30's, 40's, and 60's; (6) 1:30-3:00, Monday and Wednesday, or Tuesday and Thursday, was the preferred time slot; and (7) English and mathematics classes were most often requested for inclusion in the afternoon schedule. Based on study findings, it was recommended that more afternoon general education and transfer courses be included in the schedule of classes. The survey instrument is included. (Author/AYC)

Pursuant to legislative mandate, this report presents the results of the Commission for the Review of the Master Plan for Higher Education's reassessment of California Community Colleges (CCCs). Section 1 provides introductory material highlighting the CCC changes which the Commission believes to be necessary to achieve the goals of universal access, individual success, and educational quality and accountability. The next five sections offer discussions and recommendations concerning: (1) access and success; (2) mission and functions, including transfer education, vocational education, remediation, adult education, community service, and institutional research and evaluation; (3) faculty and administrators, including credentials, recruitment, affirmative action, part-time faculty, tenure, compensation, collective bargaining, and professional development; (4) governance, including the Board of Governors, district organization and management, district governing boards, and campus administration; and (5) finance, including sources of support, budgeting and distributing state support, emergency support, and capital outlay funding. Section 7 discusses the CCC study and recomendations within the context of the Commission's broader purpose. Appendices present preliminary cost estimates for the recommendations adopted by the Commission, a discussion of the establishment and functions of the Commission, and the text of the Senate Bill authorizing the reassessment study. A description is provided of the work of the Student Assessment Task Force, which was charged by the Washington State Student Services Commission Executive Board to "provide leadership to the state system on the topic of assessment." Following background information on the charge of the task force and a statement of its objectives and philosophy, the report addresses the following issues: (1) the purposes and outcomes of assessment; (2) the percentage of community college students entering the system with basic skills deficiencies (50%-70% for English, 46%-66% for reading, and 53%-85% for mathematics); (3) components of model assessment programs currently in existence in the Washington community colleges (e.g., integration of assessment, advising/orientation and registration, automated systems for scoring and data collection, trained test administrators, no fee or low fee for students, techniques aimed at anxiety reduction, and self-assessment of students' self-concept and motivation); (4) cooperative efforts made by faculty and student services staff members to improve assessment services; (5) research or follow-up analysis; (6) access to the data generated by assessment; (7) the educational and/or experiential preparation needed by a coordinator of assessment; (8) criteria for selecting assessment instruments; and (9) the funding issues raised by survey data. The report concludes with task force recommendations, a report summary, a list of survey respondents and contact people, and a bibliography. (LAL)

A research project was conducted in fall 1984 to identify all developmental classes taught in Washington's community colleges and to collect enrollment and student data for the entire system. Study findings, based on responses from 23 colleges and information provided by the Washington State Board for Community College Education, included the following: (1) 15.1% of the system's full-time equivalents (FTE's) were generated by basic skills classes in fall 1984; (2) campus student/faculty ratios ranged from 75:1 to 15:1, with a system average ratio of 33:1; (3) over 18,000 students were enrolled in one basic skills course in fall 1984, over 4,000 were in two developmental courses, and over 3,000 were in three or more courses; and (4) of the students taking at least one basic skills course, 39% were enrolled full-time, 49.6% were male, 15.8% were Asian, and 71.9% were white. The bulk of the report consists of data tables showing statewide and college enrollment statistics. (LAL)

A research project was conducted by the Council on Learning Assistance (CLAS) to gain a clearer understanding of the extent and nature of basic skills education in Washington's community colleges. During the study, course information and enrollment statistics for 1984-85 were solicited from CLAS representatives and deans of instruction in an effort to determine what percent of total instructional effort is devoted to basic skills/developmental education; whether the amount of effort varied from quarter to quarter; the number of students in one, two, or three basic skills courses; what percentage of basic skills enrollment is made up of reading only, writing only, reading and writing combined, and math; and what course numbering systems are used. Study findings included the following: (1) for the four quarters of 1984-85, 16.82% of the Washington community college system's full-time equivalent (FTE) enrollment was generated by basic skills classes; (2) basic skills enrollments increased significantly during the summer term; (3) campus student/faculty ratios ranged from a high of 64:1 to a low of 17:1, with an average ratio of 33:1; (4) 64% of the basic skills students were enrolled in one developmental course, 15% in two courses, and 21% in three or more courses; and (5) except for the summer quarter, the majority of students were attending full-time. Extensive appendices present enrollment, student characteristics, student/faculty ratio, and course numbering data for each campus and the system as a whole. (AYC)

Identifiers—*Washington
With declines in reading skills and increases in the standards for literacy, illiteracy has become a growing national problem. The task of dealing with illiteracy ranges from educating those adults whose basic skills are below the eighth grade level to teaching those who are struggling to learn English as their second language to serving those whose skills need strengthening in order to succeed in vocational programs and academic transfer programs. In fall 1984, Washington's community colleges served 28,724 students in basic skills/developmental education classes, yet it is estimated that only 7% of the state's need for basic skills education is being met. An estimated 69,000 additional students need to be enrolled in basic skills classes in order to make a dent in the illiteracy problem in Washington. The need for increased attention to literacy is underscored by rising standards in business and industry; population changes such as the influx of refugees; the labor intensive nature of literacy training; and the lack of funds for basic skills instruction and programs for volunteer tutors. For the Washington community colleges to make a difference in the fight to reduce illiteracy, the system will have to increase funding for basic skills/developmental education and to increase its instructional effort. Obtaining special funding from tax dollars for basic skills education on a yearly or biennial basis for the next two decades can help the community colleges make a more serious impact on the illiteracy problem. Identifiers—Student Aid Recipient Survey
A study was conducted using findings of the 1983-84 Student Aid Recipient Survey (SARS) to isolate information about financial aid recipients attending public community colleges on a full-time basis. Highlighted findings included the following: (1) aid recipients attending community colleges were older than traditional college students, more likely to be self-supporting, and more likely to be members of minority groups than the general population of students attending public two- and four-year colleges; (2) about 95% of the aid recipients received Pell Grants, and 30% of these students received no other aid; (3) 30% of the aid recipients secured Guaranteed Student Loans, and 35% received state grants; (4) middle-income dependent students were more likely to receive National Direct Student Loans than low-income dependent students; (5) self-supporting students received larger College Work-Study awards than dependent students; (6) the most common aid package received by self-supporting students consisted of a Pell Grant and a state grant, while the most common package for dependent students was comprised of entitlement assistance (e.g., Pell Grants, Guaranteed Student Loans, and state grants); and (7) total costs of community college attendance averaged about $6,000 for self-supporting students and between $3,500 and $4,000 for dependent students. Based on study findings, it was concluded that although student costs at community colleges are lower than those at four-year colleges, the amount of aid available to community college students is limited. Drawing from interviews and survey data related to career and lifestyles, leadership, and spouses, this book explores the community college presidency. Chapter 1 provides a brief overview of the characteristics and roles of those currently occupying the position. The socioeconomic and family backgrounds of today's community college presidents are discussed in chapter 2, while chapter 3 explores various paths taken by presidents to their current positions. In chapter 4, the roles and responsibilities of the president are presented. Chapter 5 defines and clarifies the president's role in governance, while chapter 6 looks at the satisfactions, successes, and failures of the community college presidency. After chapter 7 examines stress and burnout, chapter 8 explores the role of the community college president's spouse. This chapter also includes "Being There: One Spouse's Perspective," an essay by Peggy A. Vaughan. Chapter 9 delineates the leadership qualities, personal attributes, and abilities required of a successful president. Tenure in office, professional activities, and post-presidential careers are discussed in chapter 10. The final chapter provides a brief postscript concerning the characteristics and attitudes of community college presidents. A bibliography is included. (MPH)

During fall 1985, a study was conducted of the demographic and enrollment characteristics of first-time Piedmont Virginia Community College (PVCC) students. The study, which sought to identify any longitudinal trends developing over the past 4 years, revealed the following: (1) 696 first-time students enrolled at PVCC in 1985, representing the smallest group of first-time students since 1974, and accounting for only 18.1% of the total student body; (2) the typical fall 1985 first-time student was a white female, between 18 and 21 years of age, residing in either the city of Charlottesville or Albemarle County; (3) first-time students tended to enroll part-time, in day classes, and not in a curricular program; (4) between 1983 and 1984, there was a 31.4% decrease in the number of recent high school graduates enrolling at PVCC; (5) there was a steady drop in the number and proportion of first-time students majoring in General Studies; and (6) the percentage of first-time students accepted by PVCC who actually enrolled increased dramatically. The report emphasized the importance of maintaining successful outreach efforts at area high schools and recommended that recruiting first-time students at PVCC be closely monitored. (EJV)

Identifiers—*Illinois Valley Community College
Two of the essential ingredients of institutional quality are the recruitment of quality staff and the systematic evaluation of all staff. To be effective, evaluation must be supported by the governing board, must be conducted by competent administrators with histories as superior teachers, and must be based on clearly defined personnel policies and procedures. Illinois Valley Community College (IVCC) offers an example of an effective evaluation system, which since implemented at the college more than a decade ago, has been steadily refined. The system has significantly enhanced the quality of instruction through the termination of ineffective faculty and staff and through the promotion of quality performance by the staff who remain. The IVCC system involves the following characteristics: (1) all tenured and non-tenured, full-time and part-time faculty are evaluated; (2) the board sets evaluation policy; (3) faculty evaluation begins when new persons are hired; (4) faculty are evaluated through direct classroom observation; (5) evaluation is conducted at the beginning of the term; (6) faculty are evaluated only by administrators, rather than by students, peers, or themselves; and (7) merit recognition of outstanding faculty efforts is a part of the administrative evaluation system. By removing poor instructors and rewarding excellent instructors, IVCC has improved its total faculty and instruction for its students. (The paper includes a list of suggestions and considerations regarding teacher dismissal.) (AYC)

In 1984-85, as part of its annual assessment of the character of remedial programs in New Jersey, the New Jersey Basic Skills Council (NJBSC) administered the Basic Skills Questionnaire to all county and state colleges and universities and requested information on enrollments, placement testing, students identified as needing remediation, students enrolled in remedial coursework, placement policies, exit criteria, and English as a second language students. The study's findings, based on questionnaire responses from all institutions, included the following: (1) all colleges, except one, tested over 90% of their incoming students; (2) statewide, the colleges tested an average of 90% of the full-time students and 85% of the part-time students; (3) every college met or exceeded the Council's minimum placement standards in verbal skills, and almost all exceeded minimum placement standards in computation; (4) the colleges reported that increased percentages of students were identified as needing remediation in reading (37% in 1984 vs. 34% in 1983), writing (32% in 1984 vs. 28% in 1983), and computation (35% in 1984 vs. 30% in 1983); and (5) compared to 1983 responses, the colleges enrolled more of their skills deficient full-time students in appropriate courses in reading (93%), writing (95%), computation (90%), and elementary algebra (74%), but no increase was seen for part-time students. The report includes extensive data tables, along with the the questionnaire, institutional profile form, a description of NJBSC proficiency levels, policy statements, a list of problems encountered in testing, placing, and instructing students in basic skills, and supplementary part-time student data. Identifiers—*New Jersey

The New Jersey College Basic Skills Placement Test (NJCBSPT) is administered in a new form each year to all entering freshmen in New Jersey public colleges and 12 participating independent colleges. The NJCBSPT was taken by 44,344 students from March through December 1985. Test results revealed the following: (1) 26% were proficient in verbal skills, 32% in computation skills, and 12% in elementary algebra; (2) 34% of the students lacked proficiency in verbal skills, 44% in computation skills, and 59% in elementary algebra; (3) higher percentages of the recent high school graduates appeared to be proficient in each area than the test group as a whole; (4) the four-year state colleges and the university sectors traditionally enrolled better prepared students than the open-admission county colleges; and (5) over the past several years, while NJCBSPT results have remained fairly constant, Scholastic Aptitude Test (SAT) scores have begun to increase after declining for two decades. While efforts have been initiated in New Jersey to strengthen the preparation of new high school graduates, two demographic factors will have a negative effect on the basic skills problem in the more immediate future. First, colleges are increasingly recruiting students from an older, nontraditional population, who typically have greater remediation needs than recent high school freshmen. Second, an increase is anticipated in the proportion of linguistically diverse students in future freshman classes. (AYC)

A study was conducted by Daytona Beach Community College's (DBCC's) Mid-Florida Research and Business Center to determine the market for the educational services which fall within the mission of DBCC, to identify target populations within that market, to explore educational needs and perceived desires, and to examine community opinions of DBCC and its academic services. Study findings, based on information provided by county residents, educators, employers, and high school juniors and seniors, revealed the following: (1) community members agreed that some type of higher education is important for success, and they expressed more confidence in the community college system as a whole than any other educational system in the state; (2) the vast majority of community members had positive opinions about DBCC's academic reputation, offering relevant educational opportunities, occupational and leisure programs, and value to the community; (3) while 25% of the community members had taken a class in the past year, more than 33% had not been in a classroom in 10 years; (4) working women were the most likely group to have taken a course during the past year; (5) many educators were unaware of DBCC's academic strengths and the scope of its programs and services; (6) most employers expressed a strong belief in DBCC's educational relevance; and (7) high school juniors and seniors felt DBCC was at least equal to other colleges and universities, and more than half planned to attend DBCC. Based on study findings, recommendations concerning marketing and institutional promotion were developed. (EJV)

Identifiers—*Strategic Planning

Designed to clarify issues related to the definition and implementation of strategic planning, this paper presents an an examination of several themes that are central to the practical side of planning and budget development. Introductory material considers the utility of the strategic planning approach and points to three areas of higher education finance with particular relevance to strategic planning: planning methods, cost formulation, and projection. The next section considers the relationship between perceived institutional mission and sources of funding and the impact of this relationship on the determination of management policy. Next, the paper discusses the components of cost analysis that are relevant to planning and operations, using student financial aid and personnel management as examples. The final functions of administration considered relate to projecting future requirements and resources, modeling for the efficient and effective allocation of resources, and using simulations for contingency planning. Examples of organizational stress that can be alleviated through a strategic planning approach are discussed in relation to retrenchment, ensuring access to management information, and budgeting. Concluding comments stress that enhanced access to planning systems, as a component of strategic approaches to management, must be seen as central to a sound institutional response to the economic uncertainty of the current period. **Fact Book. Monroe Community College, Fall 1985.**
Monroe Community Coll., Rochester, N.Y.
Pub Date—85
Note—191p.
Pub Type— Reports - Descriptive (141)
EDRS Price - MF01/PC08 Plus Postage.
Descriptors—Academic Education, *College Administration, College Faculty, Community Colleges, Educational Facilities, *Educational Finance, Financial Support, *Institutional Characteristics, *School Business Relationship, *School Community Relationship, School Personnel, Student Personnel Services, Two Year Colleges, *Two Year College Students

A descriptive profile is provided of Monroe Community College (MCC). Section I offers background information on the history, purpose, and facilities of the college. Section II contains a brief profile of MCC's service area, looking at the population and quality of life in Rochester, New York, and examining the school's relationship to the community. In section III, data are presented on the characteristics of MCC students, evening students, alumni, faculty, and staff. Section IV focuses on MCC's academic programs, covering transfer, business, technology, health science, and service programs. Evidence of excellence at MCC is cited in section V, which highlights the ways in which MCC, its programs, students, graduates, alumni, faculty and staff, and departments and programs have been honored and recognized. Section VI considers ways in which MCC relates to local businesses, the community of Monroe County, and other colleges and universities. An overview of campus services and activities is presented in section VII, which looks at the library, computer holdings, recent innovations, student services, campus communications, recreational and cultural events, facilities, administrative and instructional services, and faculty resources and development. Section VIII explains how MCC is organized, offering information on the board of trustees, administrative structure, academic governance organization, MCC Foundation, Inc., MCC Alumni Association, and MCC Association, Inc. Finally, Section IX presents financial data regarding tuition and fees, revenues and appropriations, and costs. (AYC)

Descriptors—*Community Attitudes, Community Colleges, *Institutional Advancement, Institutional Characteristics, *Marketing, Public Relations, School Community Relationship, Self Evaluation (Groups), *Student Attitudes, *Teacher Attitudes, Two Year Colleges

Drawing from studies of major constituencies of Monroe Community College (MCC), this report provides an overview of available information on community, faculty, and student perceptions of MCC and of internal and external marketing strategies being considered by the college. The first sections highlight MCC's goal of promoting community awareness of the college's diversity, excellence, national recognition, and nontraditional qualities. The next sections summarize research data showing that: (1) the community was unaware of the excellence of education, the transfer success, and the diversity of technical training at MCC; (2) few people, including MCC students, know of the colleges articulation agreements with high schools and four-year colleges; (3) parents tended to feel that it was important for their children to attend a four-year college to get a good job, and that MCC attracted a higher percentage of less intelligent, less academically oriented students; (4) high school students perceived a stigma attached to community college attendance, but saw advantages in more personalized attention, cost benefits, and the retention of existing friendships; (5) adult women were less familiar with MCC than adult men; (6) while students had positive feelings about MCC and the quality of education provided, they felt that MCC was not appreciated by the community; and (7) faculty indicated that the community perceived MCC as a "high school with ashtrays." Discussions are pro-

vided of issues related to internal and external marketing, the kind of image the MCC community wishes to create, and considerations in promoting the college. Finally, the paper identifies the information that should be disseminated to parents, high school students, adult women, MCC students, faculty and staff, and student leaders. (EJV)

Descriptors—Community Colleges, *Demand Occupations, *Employment Opportunities, *Employment Patterns, *Employment Projections, School Business Relationship, School Community Relationship, Two Year Colleges, *Two Year College Students

An analysis of the current job market for students at Monroe Community College (MCC) in Rochester, New York, was conducted to identify directions that would not only enhance MCC's contributions to the local community, but also to its students' future success. Job market data revealed the following trends: (1) the last decade has shown a profound shift away from manufacturing toward a service and information-based economy; (2) Rochester, which has always had a greater percentage of manufacturing employment than the national average, has also experienced a decline in manufacturing; (3) the Rochester industries that announced expansion plans between 1983-85 were not high technology industries; (4) a recent survey of job vacancies indicated that Rochester demands a highly educated workforce; and (5) though many of Rochester's industrial needs were being addressed by MCC programs, there were still gaps, including a need for greater international emphasis in programs. The bulk of the report consists of data tables showing changes in employment by industry; trends in Monroe County employment; company expansions announced, 1983-85; changes in employment in the Rochester area; manufacturing and non-manufacturing employment; unemployment rates; earnings; job vacancies; employment levels in high-technology and non-high-technology industries; export of manufactured products by county; and employment projections. Descriptors—Community Colleges, *Employment Projections, Enrollment, High School Graduates, *Institutional Advancement, *Population Trends, Program Development, *School Business Relationship, *School Community Relationship, *Student Recruitment, Two Year Colleges

A comparison of Monroe County projections of high school graduates and the March 1986 Rochester Labor Area Summary points to some excellent opportunities for marketing Monroe Community College (MCC). Projections of high school graduation rates show a 25% decrease in the number of graduates between 1989 and 1991, while the demand for entry-level service employees is expected to increase. MCC will not only be competing with other colleges for this pool of high school graduates, but also with service industries that will be offering graduates attractive entry-level jobs. To deal with these demographic and economic trends, MCC should: (1) position itself within the community as the school to go to while holding a job because of its convenient location and transferable education; (2) adapt its college services for working students; (3) intensify relationships with those local service industries in greatest need (e.g., department apparel, and grocery stores; restaurants; gasoline stations; hotels, motels, and campgrounds; and amusement and recreational services); (4) consider cooperative education programs that rotate work and education time periods; (5) schedule relevant courses and programs to correspond to the slack time of particular service industries; and (6) encourage industries to offer their staff opportunities to earn college degrees through adjustable hours, tuition reimbursement, or alternative work/education. (EJV)

Designed to assist staff at Napa Valley College (NVC) in their efforts to develop short- and long-range plans for the institution, this report reviews recent reports by the Bureau of Labor Statistics regarding trends in the labor force. Following introductory material, the report looks at occupations with the largest job growth, the 20 fastest growing and fastest declining occupations from 1984 to 1995, and projected changes in employment for college-educated workers by occupation. Major trends in the labor force that may affect NVC are reviewed, including: (1) an increase in the importance of college degrees in the labor force; (2) increased participation of women in the labor force; (3) a decline in labor market participation among persons aged 55 or over; (4) increases in employment of electronics and engineering technical personnel; (5) increases in employment in health-related occupations; and (6) changes in employment prospects for office clerical workers, hotel and restaurant industry workers, protective service occupations, computer occupations, machine tool and welding occupations, education-related occupations, and scientific occupations. Finally, the report assesses the growing use of technology in the workplace. Each trend is discussed in terms of its implications for program and curriculum planning at NVC. (AYC)

Identifiers—*New York

A study was conducted of formal occupational education articulation agreements between secondary and postsecondary institutions in New York State. Specifically, the study investigated the administration of agreements; the characteristics, goals, and length of time of agreements; benefits; problems and barriers; costs; and characteristics associated with successful efforts. The study involved a statewide survey of 59 two-year colleges and 52 secondary institutions, requesting information on existing or upcoming agreements; and on-site visits and consultations at ten two-year colleges and seven secondary schools. Study findings, based on responses from 45 two-year colleges and 37 secondary schools, included the following: (1) 60% of the two-year colleges and 76% of the secondary schools reported having one or more articulation agreements; (2) the respondents identified 73 distinct agreements; (3) program coordinators indicated that contact was made with their counterparts at the cooperating institution once a semester; (4) advanced placement was the most common feature of the articulation agreements; (5) the most frequently reported objectives at both the secondary and postsecondary levels dealt with advanced placement/credit and access to college programs; and (6) the career programs most frequently identified as part of an articulated agreement were nursing, data processing, drafting, electrical technology, and automotive technology. The study report includes a sample of the questionnaire packet and a schematic of reported agreements. (AYC)

Descriptors—*Computer Assisted Instruction, *Correctional Education, Educational Benefits, *Prisoners, Program Descriptions, *Remedial Instruction

These presentations offer information on the benefits of using computer-assisted instruction (CAI) for remedial education. First, William J. Hierstein offers a summary of the Computer Assisted Basic Skills Project conducted by Southeastern Community College at the Iowa State Penitentiary. Hierstein provides background on the funding for the project, the short time frame for planning and implementation, staffing, teacher training, software needs, and student reactions and outcomes. Quotations from project and prison staff, instructors, and inmates are provided, demonstrating the degree to which computer-assisted instruction gained support and generated enthusiasm even among those who were initially skeptical about the project. William C. Bozeman offers an overview of CAI, looking at different modes and features (e.g., drill and practice, tutorial programs, and simulations) and discussing the advantages and effectiveness of the approach. Finally, a software purchase list, including information on vendors and costs, is presented. (AYC)

A description is provided of the development, implementation, operation, and outcomes of the Santa Monica College Scholars Program, a partnership of six colleges and universities assisting students with demonstrated academic achievement to accomplish their goal of earning a baccalaureate degree. First, introductory material highlights selected program features, including: (1) guaranteed admission to any participating university; (2) a mandatory core curriculum with restricted enrollment; (3) discussions among faculty from each participating institution regarding curriculum content and rigor; and (4) a special support network for program participants. After delineating the purpose and objectives of the Scholars Program, the paper describes the following program features: student entrance and maintenance requirements; core curriculum; services to students provided by the University of California at Los Angeles (UCLA) and Santa Monica College; and interinstitutional activities. The steps in the implementation of the program are outlined, including determining program management, establishing the curriculum, developing brochures, recruiting and enrolling students, conducting a reception for students, and coordinating services and articulation with partner colleges. The next section looks at the results of the program, focusing on student characteristics and the qualitative assessments provided by participating students and faculty. Finally, program characteristics that make the Scholars Program a model for future efforts to strengthen postsecondary education are highlighted. (AYC)

Descriptors—*Articulation (Education), Associate Degrees, *College School Cooperation, *Community Colleges, *Educational Change, Educational Quality, Futures (of Society), Public Relations, *School Business Relationship, *School Community Relationship, Technical Institutes, Two Year Colleges

The future of the American community, technical, and junior colleges will depend on the ability of educational leaders to shape the environment in which these institutions must function. The advent of the information-age, increasing competition for the recent high school graduate, and the current emphasis on education reform are examples of environmental changes which present community college leaders with many opportunities to determine the future of the open door colleges. The American Association of Community and Junior Colleges (AACJC) is making a significant national effort to shape the future environment. The priority aspects of AACJC's "game plan," as stated in its Public Policy Agenda, intend to: (1) promote the associate degree as an assurance of quality among employers and students; (2) enhance the high school/community college connection, by stressing academic standards and by developing articulated technical preparation training programs beginning during the junior year of high school and culminating with an associate degree; (3) develop employer/community college partnerships; and (4) build public understanding of community technical, and junior colleges, especially by gaining attention from the national media. With this plan, the mission of opportunity with excellence in community, technical, and junior colleges can be strengthened and clarified. (MPH)

Descriptors—*College Faculty, *College School Cooperation, Community Colleges, Cooperative Programs, Curriculum Development, High Schools, Questionnaires, *School Business Relationship, School Surveys, *Teacher Attitudes, *Teacher Role, Two Year Colleges

As a first step in developing an articulation plan with feeder high schools, a College of the Sequoias (COS) task force developed and distributed a survey to all full-time faculty members to determine if individual faculty members were articulating with feeder high schools and local businesses, and if they would be willing to participate in an organized departmental effort for increasing communication with the high schools. Study findings, based on a 71% response rate (N=115), included the following: (1) 33% of the respondents had made visits to feeder high schools during the past year, with many attending specific events (e.g., plays or athletic events) or for personal reasons; (2) 30% had visitors from feeder high schools in their classrooms or had high school personnel communicate with them regarding curriculum; (3) 28% had contact with local businesses or industry to discuss curricular concerns; (4) the divisions with the largest number of faculty making visits were Physical Education and Administrative/Student Services, while the Division of Science, Mathematics, and Engineering ranked highest in the number of faculty receiving visitors; and (5) 77% of the respondents expressed willingness to participate in organized departmental efforts to increase articulation. Responses by division and the survey instrument are included. (EJV)

Descriptors—Community Colleges, Courses, *Developmental Studies Programs, Enrollment Trends, *Program Costs, Remedial Mathematics, *Remedial Programs, Two Year Colleges

In 1982, the California Postsecondary Education Commission conducted a statewide survey of remedial education in California's community colleges for the 3-year period, 1978-79, 1979-80, and 1980-81. College of the Sequoias's (COS's) response to this survey included the following information: (1) COS offered 6 remedial reading courses, 4 remedial writing courses, 14 remedial math courses, 1 English as a second language course, 3 remedial support courses, and 3 special programs; (2) entrance test scores of entering freshmen in 1980-81 showed an estimated 32% reading below the 6th grade level, 25% reading between the 6th and 9th grade levels, and 30% reading between the 10th and 11th grade levels; (3) the total number of students enrolled in remedial English courses increased from 37% of the enrollment in all English courses in 1978-79 to 54% in 1980-81; (4) in 1980-81, remedial courses comprised 36% of all English course offerings and 50% of all math course offerings; (5) of the total enrollment of 2,612 students in math courses, 65% were enrolled in remedial work; (6) expenditures on remedial courses and services increased by 45% from $544,615 in 1978-79 to $790,671 in 1980-81, representing 7% of the total operating budget of COS; and (7) 66% of the remedial reading sections were taught by the English Department and 34% by the Learning Assistance Center. Descriptors—Academic Achievement, Community Colleges, *Grades (Scholastic), *Predictor Variables, *Reading Achievement, *Reading Skills, Screening Tests, *Social Sciences, Student Placement, Two Year Colleges, *Writing Skills

A study was conducted at College of the Sequoias (COS) to examine the entry-level reading and writing skills of students and their grade outcomes in the social science courses for which they were enrolled. The study sought to identify any predictors of students' eventual success/non-success in class. The study focused on the placement test scores and course grades of 409 students enrolled in spring 1982 in selected social science courses. Study findings included the following: (1) in five of seven courses, the mean reading score decreased as the course grade decreased; (2) the mean reading score for the 10 students who received an "F" was higher than the overall mean score for the entire sample; (3) for all courses, except the political science course, the mean reading score for the students receiving non-credit grades was lower than the mean reading score for students receiving credit grades; and (4) significant relationships were found between students' grade outcomes and their ability to read and write. Descriptors—*College Libraries, Community Colleges, Library Services, Questionnaires, School Surveys, *Student Attitudes, *Teacher Attitudes, Two Year Colleges, *Two Year College Students, *User Satisfaction (Information), Use Studies, *Vocational Education, *Vocational Education Teachers

A study was conducted at College of the Sequoias (COS) to gather information about patterns of library utilization among vocational students. Specifically, the study focused on vocational students' attitudes toward libraries, differences between the attitudes of library users and non-users, factors influencing library use, vocational faculty use of and attitudes toward the COS library, and faculty perceptions of the importance of student use of the library and of the best approach to teaching library skills to vocational students. Survey instruments were administered in class to 226 students enrolled in business, industry and technology, and nursing classes; and to 37 vocational faculty members. Study findings included the following: (1) 88% of the students indicated that they felt very comfortable in libraries, 84% enjoyed reading, 55% indicated that their friends frequently used the library, 76% learned to use the library in high school, and 64% felt that libraries have information that is helpful to carpenters, welders, electricians, and mechanics; (2) in comparison to students in other classes, business students agreed more strongly with the statement that their instructors felt library use was important; (3) as a whole, faculty respondents were making minimal to moderate use of the COS library; and (4) 73% of the faculty members indicated that while they encouraged their students to use the library, they did not require it. The survey instruments are appended. (AYC)

Descriptors—*Academic Achievement, *Academic Failure, Academic Probation, *Academic Standards, Community Colleges, *School Policy, Two Year Colleges, *Two Year College Students

A comparison of the number and percent of students subject to academic dismissal, academic probation, progress probation, the dean's list (GPA 2.00), and the president's list (GPA 3.00) at College of the Sequoias was drawn for the years 1981, 1982, and 1983. Statistics showed the following changes: (1) the number of students dismissed due to poor academic standing had increased by 80%, from 94 (1.2% of all students) in fall 1981 to 169 (2.3% of all students) in fall 1983; (2) the number of students placed on academic probation increased by 20%, from 758 (9.9% of all students) to 911 (12.5% of all students); (3) the number of students on progress probation decreased by 31%, from 454 (5.9% of all students) in fall 1981 to 315 (4.3% of all students) in fall 1983; and (4) the percentage of students appointed to the deans list decreased from 18.3% to 16.1%, while the percentage of students appointed to the president's list increased from 13.6% to 13.7%. Policy and program changes related to the increases in the numbers of students in academic difficulty and the decreases in the numbers achieving scholastic honors included a new requirement for instructors to submit their attendance policies in writing, a state-mandated drop fee, a decrease in tutorial services, the elimination of learning skills classes, and more stringent policies regarding course withdrawals and grading. A study was conducted at College of the Sequoias (COS) to assess the academic success of students transferring to California State University, Fresno (Fresno State), and California Poly-Technic State University, San Luis Obispo (Cal-Poly). The study focused on the number of units completed at COS,

grade point average (GPA) at COS, COS units accepted at the transfer institution, present class level, units completed at the transfer institution, transfer GPA, and student major. Study findings, based on data on 65 Fresno State students and 14 Cal-Poly students, included the following: (1) Cal-Poly accepted 93%-94% of all courses taken at COS, while Fresno State accepted 85%-90%; (2) overall, the GPA of COS students dropped somewhere from .3 to .5 grade points after transferring; (3) students experienced a larger drop in GPA at Cal-Poly than at Fresno State; and (4) students transferring to the Social Science Department at Fresno State experienced a slight increase in GPA. The bulk of the study report consists of data tables and graphs illustrating data on the transfer students. (AYC)

Descriptors—*College Freshmen, Community Colleges, National Surveys, Questionnaires, *Student Attitudes, *Student Characteristics, Two Year Colleges, *Two Year College Students

In 1985, College of the Sequoias (COS) was asked by the Cooperative Institutional Research Program (conducted jointly by the American Council on Education and the University of California, Los Angeles) to participate in a survey of incoming freshmen for the fall 1985 semester. During the summer counseling session, 259 new COS freshmen were interviewed. A comparison of COS and nationwide findings revealed that COS students differed substantially from other two-year college students in the following areas: (1) ethnicity; (2) average grade in high school; (3) academic rank in high school; (4) miles from home to college; (5) estimated parental income; (6) dependency status for 1985; (7) activities engaged in during the year; (8) highest degree planned; (9) current religious preference; (10) met or exceeded recommended years of study in English, mathematics, foreign languages, computer science, and art or music; (11) self-assessment of drive to achieve, emotional health, leadership ability, self-confidence, and writing ability; (12) reasons for going to college; (13) influences on college choice; (14) number of colleges applied to for admission; (15) number of college acceptances this year; (16) probable field of study; (17) probable career occupation; (18) father's and mother's education, occupation, and religious preference; (19) sources for educational expenses; (20) financial aid which must be repaid; (21) concern about financing college; (22) planned and preferred residence during fall term; (23) students' perceptions of their chances for success; (24) essential or very important objectives; and (25) political orientation. The study report includes data tables contrasting COS findings with results from all two-year colleges and public two-year colleges. In addition, responses to COS's supplemental survey items regarding degree goals, job-preparation training needs, planned use of COS services, evaluation and reputation of COS vocational programs, information sources, eligibility for admission to a state university, adequacy of information on COS programs and services, preferences regarding college orientation, and reasons for attending COS. A study was conducted at Howard Community College (HCC) to provide a comprehensive profile of all students who graduated with a degree or certificate from HCC in 1984. Survey questionnaires were sent to all 267 graduates, requesting information on current employment/educational status, primary reason for attending HCC, achievement of goals, satisfaction with instructional quality and overall institutional quality, reason for enrolling at HCC, year of first attendance, full-/part-time enrollment status, transfer experiences, and employment. Study findings, based on a 56% response rate, included the following: (1) 93% of the responding graduates indicated that they had achieved their goals at HCC; (2) over 90% were extremely satisfied or satisfied with the quality of classroom instruction and the overall quality of the college; (3) the most popular programs were nursing, business management, secretarial science, data processing, biomedical engineering technology, business administration, and general studies; (4) 45% had entered HCC with the intention of taking courses without working towards a degree or certificate; (5) 37% transferred to another institution, representing 80% of the students who entered HCC with transfer as their major goal. The bulk of the study report consists of graphs showing HCC findings, often in contrast with statewide results. The survey instrument is appended. (AYC)

This report presents a series of graphs and tables, offering information on students, instruction, faculty, and finances at Howard Community College (HCC) in Columbia, Maryland. Part 1 provides profiles and projections of HCC's students, including a 10-year overview of full-time equivalent (FTE) enrollment, 1976-85; enrollment projections, 1980-90; enrollment by full-/part-time status, day/evening status, minority status, gender, age group, residence, average credit hour load, educational objectives, and influences on college choice. In part 2, charts illustrate longitudinal enrollment by program type, transfer program enrollment, occupational program enrollment, cooperative education enrollment, projected instructional programs, ratings of HCC quality by 1984 graduates and their employers, and degrees and awards granted. Part 3 focuses on credit-free instruction, identifying continuing education sites and tracing enrollment trends. Faculty data are presented in part 4, which looks at full-/part-time faculty ratios, student/faculty ratios, and salary ranges. After part 5 examines community use of HCC facilities, part 6 reviews fiscal information with respect to the fiscal year (FY) 1987 proposed budget, FY 1987 proposed budget expenditures by function, FY 1987 sources of revenue, sources of revenue during FY 1980 through FY 1986, projected changes in revenue sources, contributions made to or on behalf of Maryland community colleges, net cost per FTE student, unmet financial aid needs, and tuition. In 1982-83, a study conducted at Mott Community College (MCC) identified 322 students, or 6% of the student body, as "grossly skill deficient," (i.e., achieving at the junior high school level or below in all basic skill areas). In November 1985, the transcripts of those 322 students were assembled and analyzed to determine enrollment patterns and achievement levels. Study findings included the following: (1) of the skill-deficient students, 194 were males and 123 were females; (2) all 322 registered at MCC during the 2-year period; however, 7.8% dropped all of their classes soon after registration; (3) those who did register were successful in 67% of the classes they completed; (4) the students registered for an average of 2.3 semesters; (5) only four students accumulated 60 credits or more, with the entire group accumulating an average of 10.14 credits each; (6) 31.68% had a grade point average (GPA) of 2.0 or better; (7) only 14.28% followed advice to enroll in three remedial courses, 24.22% enrolled in two remedial classes, and 20.49% enrolled in one remedial class; (8) students who took and passed remedial classes in reading, writing, and mathematics had higher GPA's, persisted longer, completed more courses, and accumulated more credits than students who did not take remedial courses; and (9) in comparison with the MCC student body as a whole, the skills-deficient students were younger, more likely to be female, and more likely to be local residents. Identifiers—*Washington

Information on enrollments, personnel, finances, and facilities in Washington's community colleges is provided in this report for the four quarters of 1984-85 and for previous years. First, general information is presented on the colleges' role, mission, and history, and on the organization of the state system. Section I contains definitions related to student characteristics and full-time equivalent (FTE) enrollments, and data on: (1) student headcount by quarter, by source of funding, by age and sex, by ethnic background, and by full-/part-time status; (2) annualized statewide FTE enrollment by funding source, course intent (i.e., vocational, academic, or basic skills), and time and location of classes; and

(3) FTE enrollment by funding source and college. Section II offers information on faculty and staff, including data on annualized FTE faculty by funding source, FTE faculty and administrative personnel by employment status and assignment area, and classified employee annualized FTE's by employment status and assignment area. Section III examines facilities and capital planning for the system and each college. Finally, section IV presents an overview of community college financial operations, including costs per FTE student, sources of funding, and expenditures by program, element, and object. Appendices include information on student tuition and fees, additional historial enrollment information, and a list of statistical publications. (AYC)

Identifiers—*Washington

Fall 1985 data on enrollments, student characteristics, and personnel at Washington's community colleges are provided in this report and contrasted with historical data for fall quarters 1980 through 1984. Report highlights are presented, indicating: (1) in fall 1985, the Washington community college system served 153,460 students, 130,498 of whom took at least one state-funded course; (2) there was a 1% drop in the full-time equivalent (FTE) enrollment of students under the age of 30, while the FTE enrollment of students 30 and over continued to increase; (3) enrollment in basic skills courses continued a 5-year pattern of growth; and (4) patterns of enrollment by full-/part-time status, sex, race, and on-/off-campus attendance were unchanged from the previous fall. The next section of the report focuses on student characteristics, including statewide and college data on enrollment by full-/part-time status, age, sex, and ethnic group. The report offers FTE enrollment data by funding source, course intent, instructional subject areas, and time and location of classes. The final section contains employment status data on faculty, administrators, and staff. (AYC)

Descriptors—Census Figures, *Economic Factors, Factor Analysis, High Risk Students, Income, *Predictor Variables, *Research Methodology, *Social Indicators, Socioeconomic Background, *Socioeconomic Status, Two Year Colleges, *Two Year College Students, Urban Education, Withdrawal (Education)

The study reported here employed a quasi-factorial ecological approach to explore the possibility of using economic and social indicators available from the 1980 census to construct a socio-economic status (SES) index. The study hypothesized that if an appropriate factor analysis model could be identified, factor score equations could be used to construct an SES index for each of the 49 zip codes in a large eastern city. In turn, students attending a public two-year college in the city could be assigned an SES measure on the basis of their residential zip code. Using census data, seven economic and social indicators (i.e., mean per-capita income, median household income, percentage of persons below the poverty level, percentage of high-school graduates and college graduates, percentage of individuals on unemployment, and percentage of individuals on work disability) were factor analyzed. Indices representing dimensions of economic deprivation and educational attainment were used to categorize zip codes as either high or low SES. Correlations of the SES indices with high-risk student behaviors, academic performance, and attrition were statistically significant in most analyses, albeit they offered only modest contributions to the explanation of overall variation. Institutional efforts to use the SES variables in counseling and recruitment have been extremely cautious, in recognition of the fact that SES data can only be used in the context of a holistic assessment. Descriptors—*Academic Persistence, *College Applicants, *Grade Point Average, *Grade Prediction, High Risk Students, Open Enrollment, School Holding Power, *Student Attrition, Two Year Colleges, *Two Year College Students

In 1981, a study was conducted at three rural community colleges in Maryland to determine whether there was a difference between the college grade point averages (GPAs) of first-time, full-time students who applied early for admissions and the GPAs of students who applied late. The study analyzed applications and GPA data for a total of 700 subjects, including 503 early applicants and 197 late applicants. The study revealed that the GPA of early applicants was higher than that of late applicants at each institution. The results suggest that application timing may help to identify a potential at-risk population for whom early intervention and proper counseling might help decrease the rate of attrition. (RO)

Identifiers—*Institutional Performance Survey (NCHEMS)

The purpose of this report is to describe the development and field testing of a two-year college version of the National Center for Higher Education Management System's (NCHEMS) Institutional Performance Survey (IPS), an instrument designed to provide information on the perceptions of various groups about the overall functioning and performance of the institution. The report explains the impetus for developing the two-year IPS; steps in redesigning the instrument, which included the solicitation of comments from a panel of administrators, faculty, and staff in three community college systems; and the field testing of the modified IPS at Montgomery College (MC), Maryland. Appendix A presents the version of the IPS developed for the MC field test. Appendix B offers an extensive executive report on the MC study, presenting a digest of the responses of administrators, associate staff, support staff, tenured and untenured faculty, and faculty at each MC campus for questions related to changes in the college environment, enrollments, revenues, institutional functioning, college culture, institutional strategy, resource allocation, and institutional effectiveness. Identifiers—*California

In response to legislative mandate, this report on current methods used to fund capital outlay projects in the California community colleges discusses the major problems with existing funding methods, analyzes various alternatives for improving these methods, and offers recommendations for legislative approval. Part 1 of the report traces the history of capital outlay funding in the community colleges, describing the major legislation that established the present system of capital outlay review. Part 2 describes five problems with the state's present method of funding community college construction, while part 3 analyzes seven different alternatives to the present system. Finally, part 4 proposes principles that should guide selection of specific methods; offers conclusions about the present system, and presents the following recommendations: (1) the state's method of funding capital outlay in the community colleges should be considered by the legislature and the Governor as part of a comprehensive approach to make the overall finance system of these institutions more congruent with their governance structure; (2) some funds beyond those provided in the state's project-by-project review should be allocated as a "block grant"; and (3) the Chancellor's Office should develop a formula to distribute these grants in ways that would take into account the size of all districts, their relative needs for campus construction, and other factors that would assess campuses' needs for additional capital outlay. Descriptors—Administrator Role, *Associate Degrees, *Certification, College Presidents, Community Colleges, Government School Relationship, Nurses, *Nursing Education, *Practical Nursing, School Community Relationship, Standards, *State Legislation, Two Year Colleges

As part of the national campaign of the American Nurses Association (ANA) to create two levels of nursing, one for bachelor of science nurses (BSN's) and one for associate degree nurses (ADN's), Illinois has been targeted for a legislative push to change the laws governing nurse licensure, which, if successful, would signal the beginning of the end of associate degree nursing in its present form. The President's Council in Illinois has recognized the critical nature of the coming fight over the law on licensure and has been actively engaged in designing an agenda of activities for implementation against the ANA's proposals. On the local level, support is being secured from ADN directors and faculty, local hospitals and nursing homes; the success of ADN programs is being publicized; and community groups are being mobilized in support of ADN programs. On the state level, the Coalition for the Preservation of the Current Nurse Practice Act has been organized to apply pressure on state legislators. On the national level, ANA activities are being monitored, information is being shared with other groups involved in the same fight, and the ANA is being challenged to produce facts and figures to support

its position. (EJV)

Identifiers—Congress 99th, Proposed Legislation
Hearings were conducted by the House of Representatives Subcommittee on Science, Research and Technology to discuss the role of community colleges in training technical personnel, with particular emphasis on how the National Advanced Technician Training Act of 1985 (HR 2353) would help community colleges meet this role. This bill creates a matching grant program in the National Science Foundation to help community colleges develop model programs to train and retrain technical workers by providing funds to be used to develop programs and courses, train faculty, organize cooperative programs with local industry and purchase necessary equipment. The minutes for the hearing on the bill include statements by Representatives Doug Walgren and Sherwood Boehlert. Testimony concerning the need for technical training and retraining of workers and the role of community colleges in this effort by business and educational leaders is provided by Joseph L. Hines of Community College of Allegheny County (PA), Cheryl Wilson of Mellon Bank (PA), Edward J. Slack of PPG Industries (PA), Harold Hall of Hall Industries (PA), John T. Smith of United Steelworkers of America, Jean Noble of Noble Robots (PA), Warren Anderson of Pittsburgh National Bank (PA), John H. Moore of the National Science Foundation, Sheila M. Korhammer of Northampton County Area Community College (PA), and Pat Choate of TRW (VA), H. James Owen of Tri-Cities State Technical Institute (TN), Richard T. Anderson of Waukesha County Technical Institute (WI), Michael I. Schafer of Mohawk Valley Community College (NY), and Andrew S. Korim of Community College of Allegheny County (PA). Additionally, information on the First Annual Symposium on Robots for the Handicapped; Waukesha County Technical Institute's publication, "The Business Connection: Class Schedule"; information on the National Council for Occupational Education; "Technician Supply and Demand: How Can Community and Technical Colleges Help Fill the Need?" by H. James Owen; "Criteria for Excellence in Associate in Applied Science Degree Programs," and the text of HR 2353 are included. (RO)

This course outline and study guide for "The Comprehensive Community College," a graduate course offered at Iowa State University, lists topics, objectives, and references for each of the 13 topic-based units in the course. Introductory material indicates that the course, which was designed for practicing and aspiring community college professionals, emphasizes the development, purposes, functions, and current programs of two-year colleges. The bulk of the guide consists of outlines for the topic-based units, which focus on: (1) characteristics and functions of two-year colleges; (2) history and status of the two-year college movement; (3) the community college student; (4) university parallel education and articulation with four-year colleges; (5) occupational/career education; (6) general education and liberal arts education; (7) adult and continuing education and community services; (8) developmental/remedial education; (9) student services in the community college; (10) the community college faculty; (11) organization and administration of community colleges; (12) financing community colleges; and (13) the future of the community college movement. Descriptors—*College Faculty, *Community Colleges, Faculty College Relationship, *Faculty Development, *Part Time Faculty, Professional Development, *Teacher Attitudes, Two Year Colleges
A study was conducted to collect data on the professional development status of part-time faculty in community colleges and to develop recommendations for an improved approach to staff development for part-time staff. The study includes an extensive review of the literature and a mailed survey involving 1,140 part-time faculty from selected League for Innovation colleges. The survey instrument requested information on pre-service orientation, conditions of employment, policies and procedures, the college, its students, in-service development, support for teaching, professional work environment, professional growth opportunities, and faculty characteristics. Study findings, based on a 46% response rate, included the following: (1) respondents with full-time jobs and those without full-time jobs expressed virtually the same degree of satisfaction with pre-service orientation and in-service development; (2) part-time faculty indicated that the most important information to have about conditions of employment related to their teaching assignment, while information about the nature of the part-time position was felt to be of least importance; (3) respondents expressed the least amount of satisfaction with the policy/procedures information they had received about instructor absenteeism; (4) 55.1% of the respondents were receiving in-service training related to support for teaching, professional work environment, and professional growth opportunities. The survey instrument and recommendations and implications for future studies are included in the study report. (EJV)

Identifiers—*Maryland
As part of an annual statewide evaluation process, quantitative information on community college education is reviewed by the Maryland State Board for Community Colleges. Subsequently, in particular cases, a qualitative assessment is conducted by individual colleges in response to specific questions raised by the Board. This report provides the results of individual qualitative evaluations of 53 programs throughout the state and the results of a statewide evaluation of data processing/computer programming career programs. First, the data processing/computer programming evaluation is presented. This section includes program descriptions, information on student trends and characteristics, program performance, results of evaluations conducted by the colleges, and recommendations. The next section contains qualitative program evaluation reports for 53 programs identified as having specific problems (e.g., low transfer performance, low enrollments, low job placement rates, high costs, inadequate follow-up, or declining awards). Each evaluation report includes identifying information on the college, the program, and the level of award; an overview of the problem identified; questions posed by the Board to identify the causes of the problem; the factors contributing to the problem; the college's view of when the situation might stabilize; the steps which the college plans to take to address the problem; specific issues raised by the Board; and Board recommendations. Descriptors—*College Graduates, *College Transfer Students, *Employment Patterns, Followup Studies, Graduate Surveys, Longitudinal Studies, *Outcomes of Education, Participant Satisfaction, Questionnaires, Two Year Colleges, *Two Year College Students, Vocational Followup
A formal evaluation of the academic programs of Keystone Junior College (KJC) began in 1983-1984 with a survey of the graduates of the classes of 1979, 1981, and 1983. Questionnaires were mailed to 602 of the 657 KJC graduates who had received their degree either 1, 3, or 5 years previously. The survey sought information about the graduate's further education, employment while attending Keystone Junior College, and employment since leaving the college. The graduates were also asked to describe their first career-oriented job and their most recent career-oriented job. Study findings, based on a 43% response rate, included the following: (1) 57% of the respondents attended another school after leaving KJC, with 34% of these students earning a bachelor's degree; (2) of the 122 respondents who were employed while they attended KJC, 53% indicated their education had no effect on their job situation, 16% said their education had resulted in promotion and salary increase, and 16% said they could do a better job; (3) 65% of the respondents began a new job after they left KJC, and, of these, 67% were very or somewhat satisfied with their job and 84% were very or somewhat satisfied with their preparation for this job; and (4) 45% of the employed respondents indicated that they had had another career-oriented job subsequent to their first job after graduating. The survey instrument is included along with tables presenting study findings. (RO)

Descriptors—Academic Persistence, *Attendance Patterns, Community Colleges, Day Students, Dropouts, Evening Students, Full Time Students, *Grades (Scholastic), Part Time Students, School Holding Power, Student Attrition, Two Year Colleges, *Two Year College Students, *Withdrawal (Education)
A study was conducted to document the progress of students who entered Napa Valley College (NVC) in fall 1984 with the educational objective of earning a degree or certificate. Persistence rates, changes in enrollment status, grades, and withdrawal patterns of 2,319 first-time college students were monitored from fall 1984 to spring 1986. Study findings included the following: (1) 42% of the original sample group were still enrolled in spring 1985, and 24% were still enrolled in spring 1986; (2) semester-to-semester persistence rates tended to be higher among day students than evening students; (3) 36% of the students persisting at NVC in spring 1985 changed their enrollment status from full- to part-time; (4) among students who did not re-enroll in spring 1985, 55% received all F's, W's, and/or No Credit grades in fall 1984, an additional 22% received a mixture of passing and unsatisfactory grades, and the remaining 22% failed and/or withdrew from one or more of their courses in fall 1984 and then withdrew from all classes in spring 1985; (5) the decision of students to withdraw from college took place during the first and, to a lesser extent, second semester, in which they were enrolled; and (6) students who received unsatisfactory grades in one term were likely to receive unsatisfactory grades in subsequent semesters. Descriptors—Attitude Measures, *College Faculty, Community Colleges, Political Attitudes, *Social Values, State Surveys, *Teacher Attitudes, Two Year Colleges, *Values
Identifiers—*Oregon
A study was conducted to investigate the instrumental (e.g., Ambitious, Broadminded, Capable, Imaginative, Intellectual, Loving, and Responsible) and terminal (e.g., A Comfortable Life, A Sense of Accomplishment, Equality, Health, National Security, Mature Love, and Salvation) life values of community college faculty in Oregon using the Rokeach Value Survey. A stratified (by full-/part-time teaching status and teaching assignment) proportional (by college) random sample of 984 instructors was surveyed. Study findings, based on a 51% response rate, included the following: (1) with regard to terminal values, faculty placed greater value on Health, Self-respect, Family Security, and Freedom, and less value on Salvation, Pleasure, National Security, and Social Recognition; (2) with respect to instrumental values, faculty placed greater value on Honest, Reliable, Capable, and Loving, and less value on Self-controlled, Polite, Clean, and Obedient; (3) English composition instructors placed greater value on A World of Beauty than did auto/industrial mechanic, secretarial science, and health occupations instructors; and (4) part-time social science instructors placed grater value on Courageous than did part-time health occupations instructors; and (5) males placed greater value on A Comfortable Life and An Exciting Life while females placed greater value on Self-respect and True Friendship. Based on study findings, it was concluded that community college instructors differ in life values and that these differences are related to teaching assignment and, to a lesser extent, the sex and faculty status of the instructor. Identifiers—*Fayetteville Technical Institute NC
The admissions process at Fayetteville Technical Institute (FTI) currently relies on high school class rank, prior academic performance, and an admissions interview for placement. Faculty concern about students' writing ability prompted a review of the placement test program, which resulted in a recommendation to include a measure of grammatical achievement in the admissions test battery. A study was conducted to examine the feasibility of using the Language Usage section of the Differential Aptitude Tests (DAT) as an admissions screen and placement tool. The test was administered to 79 students enrolled in fall 1985 associate degree freshman English classes. Test scores were compared to final course grades, revealing a statistically significant difference between the test scores of the successful and the unsuccessful students. The study showed that all scores over 45 (of 50 possible) resulted in a course grade of C or better, while 87% of the scores between 35 and 44 resulted in a C or better. Based on study findings, an expectancy table was developed for admissions counselors to use as an additional tool for the placement of students with deficiencies in English grammar and it was recommended that the Language Usage subtest of the DAT be included in FTI's admissions test battery. Descriptors—*Allied Health Occupations, *Allied Health Occupations Education, Community Colleges, *Educational Demand, Employer Attitudes, *Employment Opportunities, Feasibility Studies, *Medical Record Technicians, Program Development, Two Year Colleges
In November 1985, a survey was conducted at William Rainey Harper College (WRHC), in Illinois, to test the feasibility of establishing programs for medical record technicians, medical coders, and utilization analysts. The survey instrument was mailed to 1,232 hospitals, medical care facilities, nursing homes, physicians' and dentists' offices, and medical insurance offices in the greater Chicago area, requesting information on employment opportunities for program graduates, interest in training for existing employees, availability of clinical internships, and salary levels for the positions. Study findings, based on responses received from a total of 114 organizations, included the following: (1) job openings for medical record technicians could support an enrollment of 10.3 full-time equivalent (FTE) students per semester in the independent study program; (2) the medical coder program could support an average semester enrollment of 6.2 FTE, and the utilization analyst program could support 2.3 FTE; (3) employers would provide at least 34 internships for medical record technicians, 33 internships for coders, and 14 internships for utilization analysts per semester; (4) the organizations employed a total of 171 medical record techicians, 167 medical record coders, and 87 utilization analysts, with hiring records indicating that 20% to 30% of these employees are replaced each year; and (5) starting salary ranges for the three positions were $15,172 to $17,523 for medical record technicians; $15,345 to $16,803 for medical record coders; and $17,617 to $20,307 for utilization analysts. The survey instruments and detailed findings are provided. (Author/EJV)

Descriptors—*Academic Achievement, Community Colleges, Majors (Students), Participant Sat-

isfaction, *Program Effectiveness, Program Evaluation, Student Characteristics, *Tutorial Programs, Tutors, Two Year Colleges, *Two Year College Students

An evaluation was conducted of the tutoring services offered at William Rainey Harper College (WRHC) using three types of data. First, from the total number of students who used the services, 132 students from fall 1981 and 138 students from fall 1985 were randomly surveyed. Second, Tutoring Center evaluation forms completed by student participants from fall 1982 to spring 1985 were analyzed. Finally, tutoring participation data for the years 1973 to 1984 were tabulated, broken down by discipline, and compared to overall enrollment, adult population, and high school senior class enrollments in the district. Study findings included the following: (1) in relation to the student body as a whole, a high percentage of younger students were served by the Tutoring Center; (2) 47% of the students served by the center were business, liberal arts, or general education majors; (3) students utilizing the center's services had higher grade point averages than the student population as a whole; (4) the majority of students found out about tutoring services through instructors, campus ads, and other students; and (5) tutoring services were rated very highly by the students, with over 90% rating them as very useful and over 80% rating tutor technique as very good. Data tables are included. (EJV)

Descriptors—*Academically Gifted, *Honors Curriculum, Two Year Colleges, Writing (Composition), *Writing Improvement, *Writing Instruction, Writing Processes, Writing Research

Since 1975, an honors course in freshman composition has been offered at Emanuel County Junior College (ECJC), a unit of the University System of Georgia, for academically superior students whose needs may not be met by the standard curriculum. The process of identifying honors students involves screening entering students to identify those who score significantly higher than the majority on the Basic Skills Examination in both reading and writing, who write a satisfactory essay, and who have high Scholastic Aptitude Test scores. Interviews are conducted with the identified students to determine whether the honors course is appropriate for them. The central objective of the course is to develop students' ability to write coherently and logically through practice in four modes of discourse in autobiographical and biographical papers. Drawing from James Moffett's "Teaching the Universe of Discourse," the course includes units in autobiography and journal writing; biography and exposition; and argumentation. The texts for this course, two autobiographies and three biographies, were chosen to illustrate the different modes of discourse, as well as to be interesting, informative, and stimulating readings. To measure the growth of writing skills which occurs during this course, three instructors holistically grade the first and last essays written in the class using a dichotomous scale. Measured gains in writing skills, along with positive student evaluations of the course and high retention rates, provide evidence of the success of the course in countering boredom and challenging the verbally superior student. Identifiers—*Georgia, *Regents Testing Program (Georgia)

In 1972, the Board of Regents of the University System of Georgia instituted the Regents' Testing Program (RTP) to provide systemwide information on the status of student competence in reading and writing and to provide a uniform means of identifying those students who fail to attain minimum levels of competence in these areas. Since 1972, some modifications were made in testing policies and procedures as well as test content. Current policy requires that: (1) students enrolled in undergraduate degree programs shall pass the RTP as a requirement for graduation; (2) all students who have taken and not passed the RTP shall take the appropriate nondegree credit courses in remedial reading and/or writing in each quarter of attendance until they have passed all components of the test; (3) having passed the RTP shall not be a condition of transfer to another institution; and (4) students whose mother tongue is other than English may be exempted from taking the RTP provided appropriate local procedures are employed to certify the literary competence of those students. The test itself includes a reading test with 10 passages of varying length, covering subjects from natural science to the arts, and an essay test on the student's test on the student's choice of one of two topics. Each institution is responsible for administering the RTP and sending test materials to the Regents' Testing Office (RTO) for scoring. At the RTO, the reading tests are scored by computer, while the essay tests are graded holistically by three graders. The RTO provides results to the individual colleges, which then report scores to the students. (RO)

Descriptors—Administrative Problems, *Administrator Role, *College Presidents, *Community Colleges, *Leadership Responsibility, Leadership Styles, *Organizational Effectiveness, Two Year Colleges

Fulfilling the role of the community college president requires that a balance be maintained between internal constituents (e.g., students, faculty, administrators, and support staff) and external constituents (e.g., politicians, members of coordinating agencies, business leaders, trustees, alumni, and special interest groups). When the president sees that this balance has been lost, he/she must apply the proper amount of pressure and exert a positive and countervailing force to right the balance as quickly, as efficiently, and as painlessly as possible. The president must also keep in mind that imbalance between internal and external constituents may be caused by positive activities, as well as negative ones. Potential dangers to institutional balance include: (1) lack of an environment in which routine matters and minor problems are handled efficiently; (2) complacency on campus as reflected by a prolonged state of institutional inactivity in areas such as governance, construction, and teaching and learning improvement; (3) the tendency of groups on either side to band together to increase their influence, thereby presenting the president with continually shifting coalitions to either pacify or render less powerful; and (4) the possibility that various constituencies will crossover to other categories or otherwise act in an unexpected manner. A classic example of the president's role in maintaining balance relates to the issue of quality versus open access, which involves not only educational questions, but political, social, and economic factors as well. In this case, as in all others, the president must ensure balance, for without it, the college can never reach its full potential. (EJV)

Identifiers—*Santa Monica College CA

A survey of instructors at Santa Monica College (SMC), in California, was conducted by the Center for the Study of Community Colleges to gather information on liberal arts instruction, course content, goals, and teaching patterns. With support from SMC administrators and liberal arts department heads, interviews were conducted with 23 instructors, including one or two teachers per discipline in the liberal arts and sciences. Survey findings included the following: (1) a majority of the instructors had attended universities in southern California; (2) among the instructors' major instructional goals were to introduce students to college-level work, expand students' horizons, and encourage students to take responsibility for their learning; (3) instructional assistance varied on a departmental basis, with most instructors in the Earth Sciences Department having teaching assistants and no instructors in the Speech, Psychology, Studio Art, or Foreign Language Departments having assistants; (4) among the instructional changes noted were greater leniency in grading, lessening of the volume of reading assignments, and shorter, more frequent tests; (5) there was a trend toward adding laboratory and field sections in anthropology, biology, geography, and some areas of music; (6) faculty were permitted to attract students to new courses using flyers or in-class presentations; (7) instructors reviewed up to 40 textbooks per semester for possible use in their next semester's class; (8) an average of four to eight exams were given each semester; (9) instructors indicated that their biggest problems in teaching were related to unmotivated, underprepared, and uninterested students; (10) instructors felt problems could be ameliorated through reduced course loads, time off to develop new courses, higher salaries, and student screening; and (11) the extent of professional involvement of an instructor within his/her field was linked to educational background. Identifiers—*California

An overview is provided of the 1985-86 activities of the Academic Senate for California Community Colleges (ASCCC). After citing the section of the California Administrative Code establishing the ASCCC and listing the officers and members of the organization, the annual report presents a statement by the ASCCC president, Mark Edelstein, regarding the ASCCC's concern with and assessment of the community college reassessment study undertaken by the Commission for the Review of the Master Plan for Higher Education (CRMPHE). Next, a treasurer's report sets forth the financial position of the ASCCC. The report then outlines the year's activities, presenting highlights and resolutions from the two general sessions, analyzing the task and conclusions of the CRMPHE, and offering summaries of ASCCC's Minority Symposium, the organization's involvement in the American Associ-

ation of Community and Junior Colleges Convention, the work of the ASCCC's committees, and their representatives on other committees. The next section presents reports by ASCCC committees on accreditation, publications, archives, educational policies, faculty development, legislation, nominations and elections, relations with local senates, and vocational education; along with reports from ASCCC committee representatives and liaisons with other associations and councils. Finally, senate presidents and delegates are listed, along with ASCCC publications. (RO)

Drawing from a review of the literature on issues related to student retention and attrition, and research on student attitudes toward the Community College of Denver (CCD), this report suggests four models for student retention programs for different two-year college student groups. Following introductory material on the project, a literature review is presented, covering areas such as factors influencing retention/attrition and ways in which the academic and social climate of an institution can facilitate retention. The next section reports on the methodology and findings of the CCD study, which involved a follow-up of students entering the college in 1983 to determine their attitudes toward their experiences at CCD and factors that may have influenced retention. Finally, the four retention models are presented, focusing on: (1) students with undeclared majors/unclear goals; (2) students who are academically underprepared for college; (3) students entering college for the first time; and (4) returning adult students. The models delineate objectives, activities, staffing needs, scheduling issues, matters related to instructional materials, and implementation considerations. (RO)

Descriptors—*Articulation (Education), *College Bound Students, *College Preparation, Community Colleges, Counseling Services, Program Effectiveness, Program Evaluation, School Orientation, *Transitional Programs, *Tutorial Programs, Two Year Colleges

The goal of the 1985 Queensborough Community College (QCC) Pre-Freshman Summer Program (PFSP) was to ease the transition from high school to college for entering College Discovery freshmen in order to improve their academic performance and increase their chances for retention at QCC. The 6-week program included academic tutorials in reading, writing, and mathematics; counseling workshops concerned with college orientation, career development, and personal and social development; and a stipend for books and expenses. The PFSP students exhibited high motivation, persistence, attendance, and completion rates in all components of the program. In addition, they made statistically significant gains in writing, algebra, and total mathematics scores on the City University of New York Assessment Tests. Both the PFSP students and their instructors rated all components of the program highly, although the instructors had some reservations about the timing of the program and the lack of sufficient instructional hours to adequately cover the material. The PFSP evaluation report consists of a non-statistical summary and discussion of the results, their implications and recommendations, followed by several technical reports concerning the evaluation design, findings, and analyses. This report provides selected statistics on enrollments, units of average daily attendance (ADA), and finances for the California community college districts. Part I provides data on fall 1984 enrollments by college. Part II contains information on the student workload measure of ADA for fiscal year (FY) 1984-85 credit/non-credit students and for those otherwise eligible for state support. Part III offers summaries of first recalculation and second principal apportionments and ADA apportionments and credit base revenue per ADA for FY 1984-85. Part IV contains summaries of general fund transactions for FY 1984-85, and budgeted general fund transactions for FY 1984-85. Part V provides summaries of general fund income for FY 1984-85, and budgeted income for FY 1984-85. Part VI presents statewide general fund expenditures by objects and aggregated activities for 1984-85, and by objects and aggregated activities per ADA for 1984-85, a summary of general fund expenditures for 1984-85, and figures on budgeted general fund expenditures and other outgo for 1984-85. Summaries of current and budgeted expense of education for 1984-85 and 1985-86 are presented in part VII. Part VIII examines statewide general fund expenditures by activity for 1984-85, expenditures per attendance ADA by object of expenditures, capital outlay, and other outgo, expenditures by attendance ADA by activities, aggregated administrative and support activities, a summary of general fund expenditures for ancillary services, and general fund expenditures by activity. Part IX focuses on additional financial transactions, including those related to the governmental funds, propriety funds, and fiduciary funds groups. Definitions are included. (EJV)

Descriptors—College Credits, Community Colleges, Credit Courses, *Declining Enrollment, *Enrollment, Enrollment Rate, *Enrollment Trends, Females, Longitudinal Studies, Males, Multicampus Colleges, Noncredit Courses, *Student Characteristics, Two Year Colleges, *Two Year College Students

This enrollment summary provides collegewide and campus data for Miami-Dade Community College for the 5-year period from 1980-81 to 1984-85. Summary data are presented for three major variables: credit/non-credit enrollments, semester credits, and credit load. These variables are tabulated by enrollment elements of interest, such as ethnic membership, student declaration of degree type, age, full-/part-time status, and residency. Highlighted trends include the following: (1) all measures of productivity showed a steady decline over the past 5 years; i.e., student enrollments dropped 7.1%, semester credits dropped 11.4%, and average credit load decreased by 0.7 units; (2) dramatic increases in non-credit enrollments and credit equivalents were attributed to enhanced efforts in campus centers for business, industrial, and professional development; recruitment and expanded services; corporate contracts; and course marketing; (3) ratios of males to females remained unchanged across years at approximately 4.5:5.5 collegewide; (4) there was a greater decline in the number of full-time than part-time enrollments over the 5-year period; and (5) the number of new freshmen declined by 30.4% collegewide. Descriptors—Accountability, *Data Collection, Enrollment, *Followup Studies, Graduate Surveys, *Institutional Research, *Management Information Systems, Research Methodology, School Surveys, Two Year Colleges, *Vocational Followup

This manual provides information on the accountability reports prepared by Miami-Dade Community College for use on federal, state, and local levels. First, an overview is presented of the purposes of the Placement and Follow-Up (P&F) system, uses of the data, and the tasks involved in P&F reporting. The bulk of the manual explains the following data collection activities: (1) program enrollments and completions; (2) pre-program admittance enrollments; (3) supplemental, special needs, and apprenticeship course enrollments; (4) developmental and community instructional service enrollments; (5) the feedback system, which combines information from the community colleges, the State University System, and the Florida Department of Labor and Employment Security to produce reports on the status of community college graduates; (6) survey of former students; and (7) other activities, such as surveys of campus nurses and handicap coordinators to obtain handicapped data, maintenance of job placement logs, surveys of graduation applicants, surveys of program managers, and employer surveys. The next sections provide explanations of the processing of collected data, preliminary checks of data accuracy and integrity, steps taken after the creation of a master file tape, and master file and work file creation. The final sections focus on the preparation of the student P&F report, on employer follow-up, and discuss issues and subsidiary procedures that impinge upon the P&F system. (RO)

Descriptors—Community Colleges, Degrees (Academic), *Enrollment Rate, *Enrollment Trends, Ethnic Groups, *Foreign Students, Grade Point Average, Multicampus Colleges, School Demography, *Student Characteristics, Two Year Colleges, *Two Year College Students

In response to frequent data requests regarding foreign students at Miami-Dade Community College (MDCC), this report presents an overview of foreign student enrollments in U.S. institutions of higher education and examines foreign student enrollments and completions at MDCC. Section 1 provides a national overview, covering U.S. colleges with the largest foreign enrollments and foreign student enrollments by state, field of study, and country of origin. Section 2 deals with MDCC foreign enrollments, indicating that Miami-Dade matriculated more foreign visa and refugee students (N=4,316) in 1984-85 than any other U.S. college. Tables profile foreign students by country of origin, immigration status, degree program, and campus, native language, place of residence, full-/part-time status, credits taken, and grade point average (GPA). Finally, section 3 provides program completion data for MDCC's foreign students by citizen-

ship status, ethnicity, degree type, age at graduation, year of first admission, and miscellaneous student factors. Highlighted findings include the following: (1) the largest numbers of foreign students at MDCC come from the Caribbean Islands, Central America, and northern South America; (2) in the past 20 years, the number of foreign students enrolled at MDCC increased dramatically from 800 to 9,795 students; (3) visa students had the highest mean GPA and mean cumulative credits, resident aliens had mean GPA's that nearly equaled those of U.S. citizens, and refugees had somewhat lower GPA's than the other citizenship cohorts; (4) foreign students had higher mean hours earned and mean hours attempted than the MDCC student population as a whole; and (5) between 1980-81 and 1984-85, declines were seen in U.S. citizen and visa graduates in both numbers and percentages, while increases occurred in both resident alien and refugee graduation proportions. Descriptors—Career Development, *College Faculty, *Community Colleges, Faculty Development, *Job Satisfaction, Surveys, *Teacher Attitudes, *Teacher Characteristics, Two Year Colleges, *Work Attitudes

A study was conducted of the processes involved in adapting to a community college teaching career, which tends to consist of essentially the same duties and responsibilities throughout the period of employment without external boundaries demarking different career activities. The study employed an ethnographic methodology, involving in-depth interviews with 30 full-time faculty members in four community colleges which explored underlying motivations and ambivalence surrounding their acceptance of their career. Study findings included the following: (1) despite the existence of earlier career experiences, once faculty members came to the community college their careers fell into the one-stage pattern; (2) "Ambitious Faculty" were unaccepting of a lifelong career at a community college, and saw themselves in an early, temporary stage of their career; (3) "Proactive Faculty" accepted their long-term future at the community college and avoided boredeom and routinization by purposefully seeking out new activities and opportunities; (4) "Reactive Faculty" also accepted their long-term community college future, but did not feel it necessary to seek out change to relieve boredom; and (5) "Disengaged Faculty" were unsatisfied with their careers and identified more with their disciplines than with their colleges. A four-page bibliography is included. (EJV)

**Adult Students in Community College: Learning to Manage the Learning Process.**
Pub Date—Apr 86
Note—58p.; Paper presented at the Annual Meeting of the American Educational Research Association (70th, San Francisco, CA, April 16-20, 1986).
Pub Type— Reports - Research (143) — Speeches/Meeting Papers (150)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—Adult Learning, *Adult Students, Community Colleges, Continuing Education, *Dropout Prevention, Enrollment Influences, High Risk Students, Nontraditional Students, Reentry Students, School Holding Power, *Student Attitudes, *Student Needs, *Student Personnel Services, Two Year Colleges, *Two Year College Students

A study was conducted by the Appalachia Educational Laboratory (AEL) to determine impediments to and facilitators of adult students' success during their first semester of attendance at a community college and to recommend interventions which would minimize the difficulties of returning adults as they attempt to manage the learning process. The target population for the study consisted of 70 Appalachia region community college students, ranging in age from 22 to 57, who had no prior postsecondary educational experience and were enrolled in at least two major-related courses. Data collection involved in-depth interviews with all students in the sample, observations of a sample of classes in which target students were commonly enrolled, and daily logs filled out by the enrolled students for 1 week during the second month of the semester. The study found that students' attempts to manage the learning process were affected by issues related to finances, home and family, transportation, unique personal factors, goals and commitment, academic adjustment, the classroom, and the institution. Based on study findings, a number of interventions were suggested to AEL region schools to: (1) help adult students with their problems outside of school (e.g., college-sponsored child-care centers, adult student support groups, and in-service training to sensitize student personnel workers to adult students' problems); (2) improve the classroom experience (e.g., in-service teacher training to promote course organization around a detailed syllabus, thorough explanation and review in class, in-class dialog, and heightened sensitivity to the special needs of adults); and (3) improve academic services at the institutional level (e.g., more thorough counseling at time of enrollment, provision of more information about majors and careers in introductory courses, more mandatory advising sessions, and closer assessment of skill levels). Descriptors—*College Faculty, College Instruction, Community Colleges, *Computers, *Educational Change, *Educational Technology, Faculty Development, *Individualized Instruction, Professional Development, *Teacher Role, Two Year Colleges

Communications technologies have the potential to transform the educational process. In the community college context, these technologies have the power to change the the roles of faculty. On one hand, these changes might mean a reduction in the number and status of teachers. On the other hand, communications technologies may afford teachers greater opportunities for role differentiation and specialization. Another change made possible by the introduction of new technologies has been an upset of traditional power relationships in the learning process, with teachers relinquishing authority and students assuming more control over their own learning. Communications technologies also allow for much greater individualization of learning, permitting students to progress at their own speed and freeing teachers from repetitious analysis and prescription. As educators realize the potential of computers for innovation in education, many possibilities for enhancing student learning arise: (1) computers can create realistic models and involve students in real-world computer applications; (2) throughout the college, students are using the computer as a tool to analyze data, draft and revise sketches, perform laboratory experiments, or draft and revise reports; and (3) individualized instruction is available via computers in public libraries, video outlets, and electronic universities, diffusing higher education's monopoly on learning beyond high school. A final area in which communications technologies can affect the educational process lies in their potential for furthering the professional development of faculty. Realizing this potential requires that administrators and policymakers help faculty develop new skills through planning and allocating adequate resources for computer skills and courseware development. Perhaps technology's primary gift to community college faculty is the demand that they look again at the essentials of teaching and learning. (RO)

Descriptors—*College Role, *Community Colleges, *Economic Development, *Institutional Advancement, *Marketing, *School Community Relationship, Two Year Colleges

Community colleges, because of their late arrival in the development of American education, have suffered from an image and identity problem since their inception. To deal with this problem, community colleges should position themselves as unique community-based service-oriented colleges and market a specific focus to the general public. The first and most important step in the positive positioning of a college involves a commitment from top administration to a strategic marketing process that includes a clear focus of institutional mission, a clear understanding of whom the college serves, and precise knowledge of what makes its services unique. Throughout this positive positioning process, community colleges must view themselves as part of the mainstream of their communities and develop programs and services to meet the identified needs of their external publics. One fundamental and natural connection between colleges and their communities is in the local economy. This connection should be used as a major vehicle for positioning community colleges in the public's mind as a respected and integral part of society. A positioning strategy related to economic development would involve the following steps: (1) the college president must believe in and gain acceptance for the marketing mission; (2) a strategic action plan must be developed with input from internal and external publics; (3) the college must get involved with its community's economic development and chamber of commerce activities by, for example, developing a small business assistance center, assisting in visitation teams to compete for relocating industry, customizing industry-specific training programs, and publicizing the college's role in these activities; and (4) the college must follow through with its commitment and develop a reputation for integrity, responsiveness, and cooperation. Descriptors—Accountability, *Associate Degrees, Community Colleges, Educational Assessment, Educational Benefits, *Evaluation Criteria, *Outcomes of Education, *Program Effectiveness, Program Evaluation, *Relevance (Education), Role of Education, *Student Educational Objectives, Two Year Colleges

A large number of students enrolling in community colleges do not aspire to or complete the associate degree. Instead, they attend community colleges for a multitude of reasons, including job training or retraining, licensure, preparation for transfer, and avocational pursuits. Given the preponderant pattern of part-time attendance and diversity of student objectives, it stands to reason that questions would arise as to the relevance of the associate degree as a student outcomes measure. These questions differ depending upon the perspective from which student outcomes are viewed. For community college administrators, a college is "effective" when student outcomes are produced at a level sufficient to balance the costs of instruction. For educational policy makers, college effectiveness may be measured in terms of nondegree outcomes related to economic development and public service programs. Teaching faculty may have still yet another perspective on outcomes, arguing that the college is effective when

it implements academic policies that restrict the distribution of rewards to students who successfully meet standards. Within the broader context of social and educational change, additional questions arise about the utility of the associate degree as an outcomes measure; e.g., In a labor market marked by increased emphasis on service and technological jobs, is the degree undereducation for some jobs and overeducation for others? Do constraints on faculty technological skill and knowledge undermine the perceived value of an associate degree? As societal conditions change, the associate degree may diminish in importance, and non-degree, short-term courses developed for specific constituencies on an "as need" basis may represent a better strategy for achieving socially desirable student outcomes. Community colleges are increasingly influenced by state-level policies and dependent upon state financial support, making it a matter of necessity for community college leaders to develop positive liaisons with state public policy makers and law makers. Given the need for positive relations with state officials, community college leaders face a complex of four interrelated problems: (1) limited preparation in the area of inter-leader, inter-level relations in education and professional development; (2) limited information about trends outside their state; (3) a paucity of information about the forces that mold state-level decisions and patterns of policy formation; and (4) lack of knowledge about the theory and practice of effecting change in public policy directions. These handicaps must be overcome if community college leaders are to persuade state-level policy makers to favor greater institutional autonomy or if they are to assure that state-level policies are formulated to serve the colleges' best interests. Descriptors—*College Graduates, College Transfer Students, Educational Assessment, Employment Patterns, Followup Studies, Graduate Surveys, *Outcomes of Education, *Participant Satisfaction, Questionnaires, Self Evaluation (Groups), *Student Educational Objectives, Two Year Colleges, Two Year College Students
A survey was conducted of Napa Valley College (NVC) graduates who completed a degree or certificate program in the 1984-85 academic year. Surveys were sent to 320 graduates to determine what percentage achieved their educational goal by the time they left NVC; graduates' satisfaction with their NVC experience; the extent to which they took advantage of the resources available at NVC; and graduates' employment and transfer experiences. Study findings, based on a 56% response rate, included the following: (1) 89% of the graduates indicated that they were either employed on a full-time basis (50%) or were attending college (39%); (2) 37% stated that their primary reason for attending the college was to earn an associate degree and then transfer to a four-year college; (3) 90% indicated that they had achieved their major educational goal by the time they left NVC; (4) of the students who did not achieve their goal of transfer to a four-year college, 25% did not do so for financial reasons (25%) and 25% because they accepted a full-time job instead; and (5) 85% of the respondents felt that they were adequately prepared to succeed in the courses they took during their first year at NVC. Based on study findings, recommendations were developed for improving the image of the NVC, making information about financial aid more accessible to students, ensuring that students receive personal attention, improving students' college survival skills, and increasing student involvement in learning. The survey instrument is appended. (RO)

Descriptors—Comparative Analysis, *Dialects, Incidence, *Language Acquisition, *Language Usage, Parent Role, Teacher Role, *Verbs, *Young Children
Identifiers—English (General American), English (Scottish), English Speaking, Present Perfect Tense
This study assessed the role of frequency of input in the acquisition of the present perfect by Scottish and American children. Two questions were addressed: Do adults speaking Scottish English use the present perfect more frequently in speech to children than those speaking American English? If there is a difference in the frequency of input, how does this affect the course of development of this structure in the language of Scottish versus American children? Cross-sectional data were collected from 12 Scottish and 12 American children aged 3:0 to 6:4 and from adults interacting with them in naturalistic settings. The data lead to the conclusions that (1) Scottish adults use the present perfect construction in their speech to children much more frequently than American adults do; (2) Scottish children use the present perfect construction in their speech long before their American counterparts; and (3) frequency of input does play a major role in the timing and order of acquisition of the present perfect. However, its role appears to be an interactive one, in which it conspires with factors such as semantic, syntactic, and cognitive simplicity to make some forms easier to learn than others. **EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—Dialogs (Language), Elementary Education, *Elementary School Students, *Group Dynamics, Group Experience, Inquiry, *Interpersonal Competence, Moral Development, *Philosophy, *Teacher Role, Teaching Methods, Values
Assumptions about nature and personhood and the relationship between the two are implicated in the aim of doing philosophy with elementary school students and transforming classrooms into communities of inquiry. Assumptions are also made about dialogue; truth; knowledge; and the ability of children to form communities that will engender care for others as persons with rights, that will tolerate others' views, feelings, imaginings, and creations, and will care for their happiness as for one's own. In doing philosophy with young school children, assumptions are made about children's ability to commit themselves to objectivity, impartiality, consistency, and reasonableness. This latter assumption has social, moral, and political implications. This paper attempts to disclose and clarify such assumptions. (Author/RH)

Identifiers—*Project Head Start
The Mental Health Prevention/Intervention Project (MHP/IP) was designed to provide and assess comprehensive and effective mental health services to Head Start children, parents, families, and staff. Sponsored by the Latin American Civic Association (LACA) in Los Angeles, the 14-month intervention was implemented and assessed on three levels: (1) staff training and consultation; (2) parent education and involvement; and (3) in-house mental health treatment services, including short-term psychotherapy. A comprehensive needs assessment survey was conducted to provide a profile of the Head Start families served by LACA. Out of 960 children and families in the program, 845 survey questionnaires were completed and returned. A follow-up questionnaire was completed later in the year on a sample of 220 families. Head Start teachers were trained to promote children's emotional development and social competence and to identify problems with the potential for long-range damaging effects. Bilingual parent education provided training to support parents as the primary educators of their children and to increase parent involvement in LACA Head Start activities. A team approach to mental health treatment encouraged parent involvement and teacher participation. Concluding remarks suggest that the success of the MHP/IP model warrants replication in other Head Start settings. Related materials are appended, including instruments and samples of treatment case summaries. (RH)

This book examines the history and experience of programs for children of inmates. Section 1 discusses parental ties, emphasizing bonding and the father's role. Section 2 describes prison nurseries, day care and children's centers, parenting classes, furloughs, family and conjugal visits, community facilities, visitation policies, support services, and penal colonies. Focusing on legal issues, Section 3 discusses the best interests of the child and liability. Section 4 indicates matters raised by child psychologists which program planners should consider and offers recommendations for program implementation and research. Section 5 provides a comprehensive table of types of programs for inmate parents and their children, including prison nurseries, overnight stays, family and conjugal visits, children's and day care centers, parenting classes, and furloughs. The table also indicates the availability of community facilities for mothers and children, number of female inmates surveyed, and lists the names and addresses of surveyed institutions and programs. Also provided in Section 5 are Section 4-1116 (Preserving Parental Relationships) of the Uniform Law Commissioners Model Sentencing and Corrections Act, a list of individuals contacted by survey or for expert opinion, and a bibliography of the literature concerning programs for incarcerated parents and children. Identifiers—Physical Contact, Screening Procedures, Self Defense

Written for child caregivers, this booklet provides very basic information about child abuse and neglect, discusses early warnings that signal when a family is in trouble or when a child is at risk, and indicates how caregivers can helpfully intervene. Also suggested are ways caregivers might protect themselves against the charge of child abuse. Sections of the booklet concern: (1) recognizing child abuse; (2) interviewing and screening prospective employees and ongoing assessment of staff; (3) discipline and touch; (4) creating a written discipline and touch policy; (5) caring for a child who has been abused; and (6) a short program of self-defense for young children. The booklet contains numerous suggestions, such as teaching a very young child to memorize his or her telephone number by singing it to the tune of "Twinkle Twinkle Little Star." (RH)

Descriptors—*Behavior Change, *Behavior Problems, *Child Abuse, Children, Day Care Centers, Early Childhood Education, Elementary Education, *Emotional Development, Guidelines, *Intervention, Stress Variables, Teacher Response, *Teacher Role

Teachers receiving training about child abuse issues raised many questions about what they could do in a classroom to facilitate the healing and growth of an abused/neglected child. The questions centered on three main areas of concern: (1) How are children's extreme behaviors to be interpreted? (2) What is the teacher's role? and (3) What can teachers do to promote more appropriate behaviors? This booklet provides a responses to these questions. The left-hand column of each page lists personal, interpersonal, cognitive, and emotional issues likely to confront abused children. Such issues include boundaries, trust, role reversals, safety, self-esteem/self-identity, authority/power/control, shame/guilt/anger, loyalty/denial, and confusion. The middle column of each page specifies problematic behaviors related to each of the listed issues. The right-hand column offers suggestions for dealing with the behaviors in ways that control negative behaviors and give special attention to needs of abused children. To use this booklet effectively, a teacher must recognize that interventions require time and consistent application and that children under stress who have not been abused may behave in ways characteristic of abused children. Descriptors—*Child Abuse, *Childhood Needs, Child Neglect, *Day Care Centers, Early Childhood Education, Guidelines, *Health, Infants, *Nutrition, Records (Forms), Sanitation, Toddlers
Identifiers—Food Preparation, Sick Child Care

Forms and guidelines presented in this manual were compiled and/or developed by staff of agencies serving nursery schools, group day care centers, and family day care homes. The health and safety guidelines focus on excluding ill children and staff, caring for ill children, safety policies, emergency procedures, fire emergencies, pets, bites, and sanitation. Health forms provided include a health care summary and a health history for preschool/school age children, an immunization exemption form, a medication permission sheet, an emergency card, a model parental consent form regarding accidental ingestion and use of syrup of ipecac, a field trip permission form, and accident and fire drill logs. Materials concerning child abuse include a child abuse/neglect statement for parents and employee handbooks, suggested procedures for recording and reporting child abuse, a list of barriers to reporting, recording to document suspected abuse/neglect, a child abuse/neglect recording form, and a suspected child maltreatment reporting form. Material pertaining to infants and toddlers offers guidelines for diapering and toileting, health care summary and health history forms, and an infant's daily record. Food handling and nutrition is discussed in terms of safe food for healthy children, sanitation, hints for feeding infants, making baby food, and foods to avoid when feeding infants and toddlers. A 24-hour food guide for infants is provided. Resources for health and safety information are listed. (RH)

Descriptors—*Adolescents, Child Advocacy, *Childhood Needs, *Childrens Rights, Global Approach, History, Participation, Social Change, *Social Influences, *Young Children
Identifiers—*Korczak (Janusz), United Nations

The United Nations' Convention on the Rights of the Child is a major achievement in the struggle to extend human rights to children. Its antecedents include the efforts of Dan Mulock Houwer, Eglantyne Jebb, Gustave Ador, and the work and words of Janusz Korczak (pioneer in residential care and director of an orphanage in Warsaw between 1912 and 1942), whose writings can be of great help in understanding children's emotional lives. Of historical importance is Korczak's fresh look at the concept of childhood in which the similarity of children, particularly adolescents, and adults is emphasized. In contrast, children today as a whole are seen as having unique characteristics. A broad historical view suggests that, whereas economic prosperity freed Western youth from the duty to participate as adults in society, but now Western youth, sometimes for economic reasons, are excluded completely from participation in society. Today many children and adolescents want to participate more in society on an equal basis with adults. For example, youth in Holland recently formulated a constitution for schools and presented it to the Minister of Education and Sciences. Currently, hopeful and terrible signs simultaneously indicate that the condition of the world's children is both improving and deteriorating. In view of the problems Africa's children face, more voices demanding children's rights must be heard. Three pages of references conclude the document. (RH)

Identifiers—*New Mexico High School Proficiency Examination

This guide contains information helpful in developing curricula for grades K through 12 and provides the following: (1) rationale for developing school curricula; (2) a glossary of related educational terms, such as "competencies," "learning domains," and "needs assessment"; (3) a reference to the availability of the New Mexico State Board of Education's "Educational Standards for New Mexico Schools" (BSNMS); (4) guidelines for conducting a needs assessment; (5) suggestions for developing exit level and checkpoint student competencies; (6) tips for curriculum evaluation; (7) sample curriculum pages for the composition strand of a grades K through 12 language arts curriculum; and (8) sample curriculum pages for some New Mexico State Department of Education competencies shown in a sequential, checkpoint-to-exit format. The latter include competency statements in the areas of science, social studies, health, art, music, and mathematics. Appendix A contains instructional program planning and implementation guidelines from the BSNMS for language arts, mathematics, science, social studies, physical education, and the fine and practical arts. Appendix B presents goals and objectives of the New Mexico High School Proficiency Examination for the content areas of community resources, occupational knowledge, consumer economics, mental and physical health, and government and law. Also appended are specifications for skills and tasks used in assessing students' writing skills. (RH)

**The Economics of Child Care: Taking Care of Vermont's Most Valuable Resource.**
Vermont Governor's Commission on the Status of Women's Childcare Task Force, Montpelier.
Pub Date—Oct 85
Note—65p.
Pub Type— Reports - Research (143)
EDRS Price - MF01/PC03 Plus Postage.
Descriptors—*Costs, *Day Care, Demography,

Early Childhood Education, *Economic Factors, Employer Supported Day Care, Federal Programs, *Government Role, Hearings, Needs Assessment, Social Problems, *State Programs
Identifiers—*Supply and Demand, *Vermont
To investigate the gap between the supply of and demand for child care in Vermont, the Child Care Task Force (CCTF) held a series of hearings. Testimony was taken from more than 40 persons involved with child care programs, including parents, child care providers, employers, professionals in the early childhood development field, and representatives of governmental agencies. In addition, Task Force members conducted census and population data research. This report briefly focuses on the history and charge of the CCTF and the methodology and scope of the study. Discussion then describes the economics of child care, including costs to parents, providers, and employers; the demand for child care; and the supply of child care. Recommendations made by the CCTF are presented. The longest chapter of the report, the discussion of child care supply, includes descriptions of regulated and unregulated child care options in Vermont, employer initiatives across the country and in Vermont, and governmental involvement in child care, including the Child Care Tax Credit, fee scale child care, protective services child care, funding for child care, provider reimbursement rates, training for child care providers, licensing and regulation, the Child Care Food Program, other governmental programs, and governmental initiatives in other states. Appended are related tables of demographic data and a summary of the findings. (RH)

Descriptors—Classroom Research, *Computer Literacy, Computer Software, Elementary Education, *Elementary School Students, Grade 4, Grade 5, *Keyboarding (Data Entry), *Microcomputers, *Reading Ability, *Time Factors (Learning)
Identifiers—Tutorial Software
Keyboarding was taught to a group of 26 fourth- and fifth-grade students in a self-contained classroom by an elementary classroom teacher using an Apple IIe microcomputer and two software programs: "Gregg Personal Keyboarding" and "Typing Tutor II." Intervention spanned 52 class days, including pre-, mid-, and posttest days, with each student having approximately 10 minutes of computer time per day. Total time of computer use was approximately 520 minutes per child. The instructional goal of the intervention required that students reach a speed of 20 gross words per minute (gwpm) with three or less errors per minute. Students achieved a mean speed rate of 19.73 gwpm, with an error rate of 5.96 on the 46-word timed writing instrument. Keyboarding scores were examined for differences associated with grade level, sex, reading ability, student access to typewriter or computer at home, and ability to play the piano. (Author/RH)

Identifiers—*Family Policy
As part of its world employment project, the Economic Policy Council of the United Nations Association of the United States formed the family policy panel to further examine the extent of ongoing changes affecting the family, the workplace, and the economy. In its work, the family policy panel concentrated on five issues considered central to the framework of any family policy: maternity and parental leaves and benefits, child care, maternal and child health care, equal employment opportunity and pay equity, and flexibility in the workplace. The panel arrived at a set of specific policy options which are presented in this document prior to discussions of the family and the labor force, implications for families, implications for employers, international perspectives on family policy, and the five policy issues mentioned above. Appendix A provides a table of basic data concerning maternity, paternity, and parental leaves as of 1984 in other western industrialized countries, such as France, German Democratic Republic (East Germany), Italy, Sweden, and the United Kingdom. Appendix B presents six case studies involving Merck & Co., Inc.; American Can Company; Steelcase, Inc.; Service Employees International Union, AFL-CIO-CLC; Communications Workers of America, AFL-CIO; and Empire State Day Care Services Corporation. Information about the Economic Policy Council, the United Nations Association of the USA, and its reports and book series is also included in the document. (RH)

Descriptors—*Early Reading, Field Tests, Foreign Countries, *Guides, *Instructional Development, Instructional Material Evaluation, *Language Experience Approach, Piagetian Theory, Preschool Children, Preschool Education, *Program Implementation
Identifiers—Canada, *Preoperational Thought, United States
A Piagetian, language-experience approach to the early teaching of reading to normal young and older developmentally delayed preoperational children was developed. The approach was discussed in a specially-developed manual which was field tested by 42 teachers among 390 children in 16 school systems in several states and in Canada. Subjects were preponderantly residents of suburban communities in the United States, white or black, 3 to 5 years of age, and students at public schools. Specific goals of the practicum were to acquaint the teacher of preoperational children with the developmental characteristics of such children and with the theories, purposes, and procedures of an expanded version of the language-experience approach. The manual also provides complete lesson models including ready-to-use follow-up activities for the teacher, practical management and record keeping techniques, and models to help teachers explain development in Piagetian terms to parents and administrators. Project evaluation data indicate that the approach was effective in beginning the reading process among preoperational children of all ages (2 through 12 years). Teachers using the manual found it to be clear and helpful. Questionnaires used in evaluating the practicum are appended, along with enthusiastic comments made by teachers who had used the manual. Descriptors—Cognitive Development, *Cognitive Processes, *Early Childhood Education, *Early Experience, Educational Background, Foreign Countries, *Logical Thinking, Piagetian Theory, Preschool Children, Primary Education, *Young Children
Identifiers—*Piagetian Tasks, *Swaziland
Conducted in Swaziland in 1984 and 1985, this research study explored children's logical thinking skills. One of the primary elements examined was the relationship between previous preschool experience and the child's ability to perform logical thinking tasks. The study consisted of six Piagetian tasks given to 400 children, preschool through grade 3, who represented a sample from the variables of sex, age, grade level, SES background, urban and rural settings, and previous preschool and non-preschool attendance. The most striking result indicated that non-preschool attenders performed better on five of the six tasks; namely, length, weight, number, seriation, and grouping. The preschool attenders performed slightly better only on the classification task. Rationale provided for this finding included the lack of development of good quality preschool programs in the country. Recommendations indicate the need for curriculum development in early childhood education and for upgrading preschool teacher training programs in the country. (DST)

The primary goal of this study was to identify curricular experiences and teacher behaviors encouraging preschool children to meaningfully use written language. A second goal was to investigate children's growth in literacy in the context of a preschool classroom. The study was conducted over a 5-month period among 8 Head Start and 8 tuition-paying children whose ages ranged from 3 years, 3 months to 4 years, 10 months. The sample's mean age was 3 years, 10 months. In collaboration with the teacher, the researcher chose 6 of the children for videotaping and planned and implemented a literacy curriculum involving print in the environment, writing, booksharing, and dictated language experiences. Targeted children were videotaped daily over a 4.5-month period as they engaged in literacy events during free-choice time. A total of 32 hours of videotaped literacy events were analyzed to determine the impact of the curriculum on the children and teachers. Additional data were obtained through the administration of literacy tasks at the beginning and end of the study, a parent questionnaire, researcher's field notes, samples of the children's writing, and the teacher's daily log. Findings indicated that the teacher was the most important factor in facilitating children's growth in literacy. (RH)

Education, Family School Relationship, Higher Education, *Kindergarten, *Preschool Teachers, *Preservice Teacher Education, *Program Development, Teacher Responsibility, Teaching Guides, Teaching Methods

Written by the Minnesota Early Childhood Teacher Educators (MECTE), this booklet focuses on the knowledge and competencies needed by the kindergarten teacher. While the booklet is primarily addressed to college faculty for use in training pre-service kindergarten teachers, it can also be used as a resource for other college faculties, practicing kindergarten teachers, elementary teachers, and others. The booklet was developed specifically to address the following concerns: challenging current trends toward developmentally inappropriate curriculum content and practices; addressing the discrepancy between content in teacher education programs and children's experiences in kindergarten classrooms; examining the need for both commonality and uniqueness in college and university teacher education programs; evaluating current kindergarten practices; developing a comprehensive program for the preservice kindergarten teacher; and interpreting the kindergarten program to parents, administrators, and other educators. Topics covered include the following: an overview of kindergarten; curricular responsibilities; interpersonal responsibilities; and program responsibilities. (DST)

Descriptors—Alcoholism, Battered Women, Behavior Change, *Communication Skills, Depression (Psychology), *Emotional Problems, Family Problems, *Helping Relationship, *Inservice Education, *Parent Education, *Parenting Skills, Termination of Treatment

Identifiers—*Parent Aide Programs

These inservice training materials were developed to address issues arising when parent aides assist parents under stress. Survey data from aides and their supervisors indicated that they wanted to know how to communicate with parents about their children; how to work with families having problems with alcohol, exploitation, and depression; how to work with cognitively limited parents; what to expect from the relationship with the parent, how to encourage change, and how to end the relationship on a positive note. The eight sections of this manual address these concerns with workshop material focusing on stages in the aide/parent relationship; practicing communication skills; redefining change; strengthening parenting skills; anticipating termination; working with cognitively limited parents; alcoholism, exploitative relationships, and depression; and completing termination. Workshop material for each of nine sessions includes an introduction for the leader, an overview of the session, learning activities, and handouts for participants. Included in the document are additional materials for parents which indicate characteristics of children at different ages and allow parents to record events involving their children which they may wish to talk about with a parent aide. Identifiers—Concerns Analysis

"Highlights" magazine receives approximately 75,000 letters and contributions each year from young readers. Common concerns children write about include getting along with family members and friends, problems at school, and social and personal problems. Only a tiny percentage write of grave problems such as abuse, suicide, or drugs. Frequently letters concern teasing and other unkind behaviors by friends and classmates, with teasing by classmates being the largest school-related concern. Other school-related concerns involve problems understanding schoolwork or keeping up with the class, classmates who talk in class and distract others from their work, disruptive class members who cause the entire class to lose privileges, and –rarely–difficulties getting along with the teacher or complaints about teacher behavior. Each letter received is answered, and the "Highlights" staff relies very much on parents, teachers, and other adults to be sensitive and responsive listeners to children who may contact them. Children writing about personal and social concerns evidently know their shortcomings but find it difficult to change long-established behaviors and do think and care about "adult" issues, even though research indicates that parents do not think of their children as having such concerns. Descriptors—*Age Differences, Comparative Analysis, *Concept Formation, Elementary Education, *Elementary School Students, Grade 2, Grade 4, Grade 6, *Individual Characteristics, Rating Scales, *Research Methodology, *Social Cognition

Identifiers—Accuracy, Developmental Patterns, *Peer Perception

Employing a new procedure for measuring peer concepts, this study investigated the development of differentiation and accuracy of children's concepts of their peers' attributes. Subjects, 18 second-graders, 23 fourth-graders, and 18 sixth-graders, were asked to rate characteristics of their peers in mathematics, athletics (running), and in two social areas - anger and shyness. To compare methods, the attribute questions were also asked in a paired-comparisons picture sociometric procedure. To assess response accuracy, measures of each child's actual skills or characteristics were obtained by using mathematics grades, a running speed measure, and teachers' ratings of anger, shyness, and popularity. In general, analyses indicated that differentiation and accuracy of children's concepts of their peers' attributes increased with age. While second-graders viewed many of the attributes as being related, they did show some differentiation. Fourth-graders differentiated more than second-graders, but saw running ability as related to popularity and shyness as negatively related to running ability. By sixth grade, the attributes are seen as distinct except that children who angered easily were seen as unpopular. In comparison with the paired-comparison task, the rating-scale method revealed differentiation and accuracy at an earlier age. It is concluded that the rating-scale technique appears to be a viable method for the assessment of children's – especially young children's – concepts of their peers. (RH)

**Complexity Survey.**

Pub Date—Apr 86

Note—9p.; Paper presented at the Annual Conference of the Midwest Association for the Education of Young Children (Peoria, IL, April 17-20, 1986).

Pub Type— Reports - Descriptive (141) — Speeches/Meeting Papers (150)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—*Classification, *Difficulty Level, Early Childhood Education, *Instructional Materials, *Preschool Teachers, Surveys, *Teacher Response

Identifiers—*Complexity Index

To determine whether consensus existed among teachers about the complexity of common classroom materials, a survey was administered to 66 pre-service and in-service kindergarten and prekindergarten teachers. Participants were asked to rate 14 common classroom materials as simple, complex, or super-complex. Simple materials have one obvious part, have no subparts enabling multiple combinations, and support children's activity for short periods of time only. Complex materials have subparts or two essentially different items together. Super-complex materials have three or more essentially different elements combined, or they include a markedly different object added to an already complex material. Items rated were: (1) a ball; (2) sand without props; (3) a set of Legos; (4) an obstacle course made of tires, boards, and boxes; (5) a block area with small props and large crates; (6) a single book; (7) an outdoor commercial wooden climbing structure; (8) blocks with no props; (9) crayons; (10) playdough without props; (11) a well-equipped dramatic play area; (12) pegs and pegboard; (13) wet sand for digging, pouring, and making impressions with tools; and (14) a guinea pig, gerbil, or rabbit. Teachers were in substantial agreement, viewing as simple 1, 2, and 6; as complex 3, 8, and 12; as super-complex 4, 5, 11, and 13. Discrepancies in teachers' ratings were found for items 7, 9, 10, and 14. The extent of consensus is taken as support for the ideas of Kritchevsky, Prescott, and Walling (1969). (RH)

Descriptors—*Educational Improvement, *Kindergarten, Motivation, *Parent Participation, *Parent Workshops, Primary Education, *Teacher Workshops, Training
Identifiers—*Continuity, *Project Head Start
The goal of this practicum was to continue parent classroom participation from Head Start to kindergarten. Questionnaire data indicated that, while 27 percent of parents volunteer regularly in Head Start, only 8 percent volunteer regularly in kindergarten. To increase parent participation in kindergarten, Head Start parents and kindergarten teachers attended workshops designed to train and motivate participants to work effectively together. Objectives of the practicum were met: Head Start parents and kindergarten teachers made a written commitment to increase parent participation in the kindergarten classroom. Appended are (1) the parents' questionnaire; (2) the kindergarten teachers' questionnaire; (3) a checklist of ways parents can participate in the kindergarten classroom; (4) a form assessing kindergarten teachers' intentions regarding parent participation; (5) a questionnaire for former Head Start parents with children currently in kindergarten; (6) findings; (7) suggestions for increasing parent participation in kindergarten; (8) and a school readiness checklist. Descriptors—*Classification, *Memory, *Participant Observation, *Preschool Children, Preschool Education, *Research Methodology
Identifiers—Context Effect, *Emic Etic Analysis
The "emic" research method used in cultural anthropology is described and its usefulness in developmental psychology is illustrated. A distinction is made in cultural anthropology between "etic" and "emic" research methods. In etic research observers employ established categories, such as prior definitions of constructs and variables, to interpret data. In coutrast, researchers using an emic approach record behaviors and "work through" protocols until they discover what the observations mean to the persons who are observed. Participant observation, cultural anthropology's emic method, involves the: (1) collection of descriptive field notes and derivation of tentative categories; (2) refinement of tentative categories; and (3) testing hypotheses about refined categories in controlled research. The emic method was used in a study of classes of 3-, 4-, and 5-year-olds in a day care center. Observations of 127 behavioral events that seemed to involve "memory" were recorded. Memory instances were found to be classifiable in a taxonomical matrix of 2 sources by 10 categories: child or adult initiator across naming, rhymes and songs, what happened before, anticipation, appropriate behavior, forms/functions/sounds, persons, place memory, academic, and answering requests. Memory was found to be embedded in behavioral events that rarely had memory as a major goal. Thus, the study of memory may require a holistic theoretical approach, such as those of Piaget and Jenkins. (RH)

Identifiers—*Developmental Indicators Assessment Learning Rev, *Heterogeneous Classrooms, Taiwan (Taipei)
To examine the child variables which may affect the validity of a screening test in a heterogeneous kindergarten, 64 kindergarten children attending an international school in Taipei, Taiwan, were screened with the Developmental Indicators for the Assessment of Learning - Revised (DIAL-R). Thirty subjects were Caucasian, 21 were Oriental, and 11 had Caucasian-Oriental parentage. Two were not classified by race. Genetic variables (sex, race), environmental variables (years in host country, parental educational level, birth order, size of family, bilingualism of child and parents, birthplace, primary language of child and parents), and the interaction of race and primary language were analyzed to ascertain their effect on the four DIAL-R scores: motor, concepts, language, and total score. The most significant genetic factor was the child's race. The most significant environmental factor was the child's primary language which is affected by parents' language(s). Of the two, language differences appeared to be the overriding factor. Significant differences are discussed. One study finding is that when using an American normed test with a heterogeneous population, local norms are advisable for interpreting the test correctly and meeting the needs of the children tested. Descriptors—Children, *Comparative Testing, *Criteria, *Language Acquisition, Language Research, *Matched Groups, *Mental Retardation, Research Needs, Research Problems
Identifiers—*Mean Length of Utterance, *Normal Children
The adequacy of mean length of utterance (MLU) as a criterion for matching retarded and normally developing children was investigated. Six normally developing and four retarded subjects were matched on MLU. Although matched on MLU, these two groups of children demonstrated both quantitative and qualitative differences in their use of language. Normally developing children produced a higher rate of intelligible speech and a greater proportion of that speech was devoted to spontaneous and multi-word utterances. In addition, these normally developing children demonstrated larger spontaneous vocabularies than the mentally retarded children. It appears that these differences were not simply a function of rate of intelligible speech. It is concluded that the data of this study support the argument made by Klee (1985) that MLU does not discriminate children's profiles of grammatical development. Linguistic matching of children demands multiple measures of child language. (Author/RH)

Descriptors—Children, *Data Analysis, *Individual Differences, *Language Acquisition, Longitudinal Studies, Moderate Mental Retardation, *Mothers, *Research Problems
Identifiers—Elicitation Techniques, *Group Data, Normal Children, *Strategic Behavior
Discussed are limitations of studies focused on group data and some alternative conventions that might be used in reporting data so that it accurately represents individual subjects' patterns of language development. Evidence is presented from (1) a study of mothers' attempts to elicit verbal behavior from their normally developing or moderately retarded children, (2) an 18-month study of developmental trends in mothers' choice of verbal behavior elicitation strategies, and (3) a review of 5 years of research presenting group data in five prominent journals and focusing on mothers' strategies for eliciting children's verbal behavior suggests that reporting only group data may be inadequate. Presentation of group data may be enhanced by (1) describing the number of subjects that resemble the group data; (2) showing the range, mean, and standard deviations of scores; and (3) presenting individual data graphically so that profiles deviating from the group data are immediately apparent. Descriptors—*Cognitive Processes, Elementary Education, *Elementary School Students, *Modeling (Psychology), *Preschool Children, Preschool Education, *Recall (Psychology), Training
Identifiers—*Self Regulated Learning, *Verbal Self Instruction
This article discusses the idea that overt verbalization helps to develop children's self-regulated learning of cognitive skills. It points out that (1) verbalization can enhance children's attention to task-relevant features; (2) as a type of rehearsal, verbalization may improve coding, storage, and retention of material, and thereby facilitate subsequent retrieval and use; (3) verbalization can help children maintain a positive task outlook and cope with difficulties; (4) because verbalization makes salient a systematic approach for improving learning and children's ability to apply it, verbalization also can raise self-efficacy (perceived capabilities). Research is summarized that assesses the effects on children's learning of verbalizing information to be remembered, modeled actions, and strategies. Collectively these findings support the notion that verbalization is a key process that can help develop self-regulated learning among children. Concluding remarks suggest that future research should explore maintenance and generalization of systematic approaches to learning, verbalization of task-specific and general statements, and uses of verbalization in classrooms. Report No.—DHR-CSA-211-85
Pub Date—Aug 85
Note—76p.
Pub Type— Guides - Non-Classroom (055)
EDRS Price - MF01/PC04 Plus Postage.
Descriptors—Anger, Behavior Patterns, Child Development, *Coping, *Intervention, *Parent Education, Parenting Skills, Parents, *Parent Workshops, *Stress Management, Values
Identifiers—*Project Head Start
These workshop sessions were designed as a series to assist low income parents to deal more effectively with the primary sources of stress in their lives, with particular attention given to issues of parenting, self-care, and the reduction of isolation. Sessions were field-tested by highly qualified and experienced trainers, each of whom also had clinical experience and high levels of knowledge of child development and parenting. Workshop Session I defines stress and points out signs indicating stress. Session II focuses on helping parents to identify activities that give them pleasure or that they would like to do, and then to plan and later carry out one such activity. Sessions III and IV discusses child development and parental stress. Session V explores child development and parental values. Sessions VI and VII, respectively, probe reasons for children's behavior, and the relationship between anger and stress. Session VIII reviews previous material and offers conclusions. Users of this curriculum are cautioned about their choice of trainers – the workshop sessions require trainers who are knowledgeable

about stress, group process, counseling, child development, and parenting and who can deal effectively with individuals experiencng high levels of anxiety, stress, or even crisis in their lives. (RH)

This presentation describes the child care center at Detroit's Mount Carmel Hospital, a division of the Sisters of Mercy Health Corporation employing approximately 1,550 women. Discussion focuses on reasons for establishing the center, facility acquisition, program details, program management, developmental philosophy, parent involvement, policy issues, employee morale, and accreditation. The child care center is seen as an important benefit for employees and one which clearly communicates the hospital's commitment to improving the quality of work life for employees. (RH)

Descriptors—Adolescents, *Birth Weight, Early Parenthood, *Federal Programs, *Health, *Infant Mortality, National Surveys, *Neonates, *Premature Infants, Program Effectiveness, State Surveys, Tables (Data), Unwed Mothers
Identifiers—Fact Sheets, National Goals, *Prenatal Care
This databook describes the status of maternal and child health in America; the nation's progress in reducing infant mortality, low birthweight babies, and the percentage of pregnant women who receive late or no prenatal care; patterns of teenage and out-of-wedlock childbearing; and the extent to which certain safety net programs, such as Aid to Families with Dependent Children, Medicaid, and the Women, Infants, and Children Supplemental Food Program, are meeting the needs of the poorest women and children. Data for the years 1978-1983 are based on published and unpublished statistics from the National Center for Health Statistics. All 1984 data are based on published and unpublished data from 40 state vital statistics offices. After an overview of findings, Part 1 focuses on national findings and Part 2 reports highlights of state findings. Included in Part 2 are tables ranking states on their problems and programmatic responses, as well as the Surgeon General's 1990 Objectives Maps which indicate states' progress toward meeting established goals. Approximately half of the databook consists of state fact sheets. Related tables and technical notes are appended. (RH)

Descriptors—*Behavior Development, *Expectation, Foreign Countries, *Infant Behavior, *Infants, Longitudinal Studies, *Visual Stimuli Identifiers—*Japan, *Search Behavior
The purpose of this study was to longitudinally examine the development of anticipatory visual search and to find out the effects of preceding experiences upon the search during the second year of life. The sample consisted of 18 Japanese firstborn nonretarded children from middle-class families who were individually tested at 11, 12, 14, 16, 22, and 24 months. At each test session, each subject received 2 trials at a task in which an object disappeared at a tunnel entrance and reappeared at an exit. The child's visual fixation toward the object and the entrance, the exit, and other zones of the tunnel was measured and the entire procedure was videotaped. Visual search during occlusion of the object was assigned to five levels of anticipation. Findings indicated a developmental sequence from level I to level III and a transition period of 14 months. Within level III, change occurred from level III-1 to level III-3 across a period of 22 months. Level II and level III-2 were regarded as transitional levels despite their limted emergence due to the decrement of their occurrence at later months. Such development was interpreted as the reflection of the process of coordination between spatial and temporal information in object permanence. (RH)

Identifiers—Life Expectancy, Mortality Rates
Part of a program of publications concerning the status and advancement of women coordinated in four journals by the Group for Initiatives on Women and Development, this issue of "Children in the Tropics" focuses on mothers' health. Section I describes factors conditioning the health and nutritional status of women and girls. Discussion centers on life expectancy at birth, maternal mortality rate, and birth rate. Section II focuses on aspects of maternal and child health, including nutritional requirements of pregnant and lactating women; weight gain during pregnancy; mothers' age, number of children, and interbirth interval; maternal nutritional status, breast-feeding, and interbirth interval; anemia; work and women's health; pregnancy in adolescents; abortion; the growth of girl children, starting in the intrauterine period, and their ability to bring pregnancies to term when they reach childbearing age; and sexual mutilations. Section III briefly reports actions aimed at improving women's health in the areas of education, surveillance of pregnant women, food supplementation, planned parenthood, appropriate technology, and legislation. In conclusion, health problems facing rural women are pointed out. Numerous tables and graphs are provided. (RH)

Identifiers—*Florida (Saint Leo)
A total of 26 preschools and day care centers in Saint Leo, Florida indicated the extent to which they were involved in teaching prereading and reading skills, when a questionnaire listing 50 reading and related activities was sent to 54 local centers. Respondents were instructed to indicate whether they engaged in the listed activities frequently, sometimes, or never. Overall, findings indicated that the day care centers and preschools appeared to be implementing appropriate prereading activities. Discussion emphasizes the importance of developmentally appropriate activities, and recommendations are offered for guiding the introduction of prereading into the preschool setting. (RH)

Descriptors—Comparative Analysis, *Disabilities, *Educational Environment, *Educational Facilities, Elementary Education, *Elementary School Students, *Perception, Photographs
Identifiers—*Normal Children
A total of 168 elementary school students with and without mild to moderately handicapping conditions participated in a study on the visual perceptions that pupils have of their schools. The study sought, in part, to determine whether mainstreamed students see their school differently than peers without handicaps. Subjects were asked to photograph aspects of their schools which they considered illustrative. A thematic categorization of the resulting 1,415 photographs was conducted and results were statistically analyzed. Very few statistically significant differences were found among the pictures of control, resource room, and special class groups. None of the statistically significant differences were considered as having practical significance. Results suggested that elementary school students, regardless of placement or possession of a mild to moderate handicapping condition, have similar visual perspectives of their school. The finding of so few significant differences was considered to be a potentially important finding in itself. (Author/RH)

Descriptors—Comparative Analysis, *Contingency Management, Elementary Education, *Elementary School Students, Grade 2, Grade 4, *Hyperactivity, Kindergarten Children, *Learning Disabilities, *Performance Factors, *Student Behavior
Identifiers—*Instructions, Normal Children, Rule Governed Behavior
The major purpose of this study was to describe the rule-governed and contingency-shaped behavior of learning-disabled, hyperactive, and nonselected elementary school children working on a computer-managed task. Hypotheses tested were (1) that the children would differ in the degree to which either instructions or external contingencies controlled their behavior, with the hyperactive children being more sensitive to external contingencies, the learning disabled children more sensitive to instructions, and the nonselected children responding somewhere between; and (2) that the hyperactive children would show more response inconsistency and inappropriate responding than the other two groups. Ranging in age from 94 to 132 months, subjects were 20 referred hyperactive and/or attention deficit disordered children, 20 second- and fourth-grade learning disabled children, and 20 second- and fourth-grade nonselected children. Ten nonselected kindergarten children were involved in a concurrent developmental comparison study. Results revealed no interactions of diagnosis or grade with type of instructions. However, a fine-grained analysis of task performance yielded variables which discriminated grade levels and diagnostic categories. (RH)

Descriptors—*Age Differences, Attention Control, Classification, Comparative Analysis, *Hyperactivity, *Learning Disabilities, *Performance Factors, *Reaction Time, Visual Stimuli, *Young Children
Identifiers—Distraction, *Normal Children
The present research assessed the ability to attend to relevant information in the presence of irrelevant distraction in hyperactive (H), learning disabled (LD), and unselected (US) children. A total of 20 LD, 20 H, and 20 US children divided into younger and older age groups participated in the study. Younger children were between 94 and 104 months of age; older children were between 105 and 126 months. The task was a computer-presented variation of a standard speeded classification card-sort task, one commonly used to assess attention ability of H and LD children. Children were asked to touch a target shape on a touch-sensitive video screen in the presence and absence of distractors. Individual response times (RT) were measured for 60 trials. Each child was scored for his or her average RT and variance of RT in each condition. No significantly different RT patterns to stimuli with and without distractors were observed among the younger or older LD, H, or US children. Both H and LD children were less stereotypic than US children in RT variance. The H children evidenced less stereotypic response for stimuli with distractors than for stimuli without distractors, and LD children demonstrated an opposite pattern. (RH)

Descriptors—*Communicable Diseases, *Day Care, *Disease Control, Disease Incidence, Early Childhood Education, Guidelines, Immunization Programs
Identifiers—Acquired Immune Deficiency Syndrome, Childhood Illnesses, Gastrointestinal Diseases, Respiratory Diseases, Skin Infections
Discussed in this publication are infectious illnesses for which children attending day care appear to be at special risk. Also covered are the common cold, some infectious disease problems receiving media attention, and some other annoying but not serious diseases, such as head lice, pinworms, and contagious skin conditions. Causes, characteristics, symptoms, treatment, prophylaxis, and/or seriousness of diseases, as well as public attitudes toward them, are discussed. Focusing on respiratory diseases, chapter I describes acute upper respiratory illnesses (common cold), streptococcus sore throat, otitis media with effusion (OME), Hemophilus influenzae Type B disease (HiB), meningococcal meningitis, and tuberculosis. Chapter II concerns gastrointestinal infectious diseases, including hepatitis A, shigellosis, giardiasis, and rotavirus infection. Infections of the skin are described in chapter III. These include impetigo, fungus infections, ringworm of the scalp and body, scabies, and cold sores (herpes labialis). Other illnesses of special significance in day care are described in chapter IV: cytomegalovirus (CMV) infection, chicken pox, head lice, pinworms, and Acquired Immune Deficiency Syndrome (AIDS). Chapter V discusses immunization for diptheria/whooping cough/tetanus, the safety of immunization, and vaccination for measles (rubeola) and German measles (rubella). Chapter VI suggests guidelines for dealing with communicable diseases. (RH)

Identifiers—Fact Sheets, Sudden Infant Death Syndrome
Activities conducted during the calendar year 1985 by the Select Committee on Children, Youth, and Families focused on (1) Alcohol Abuse and Its Implications for Families; (2) Families with Disabled Children: Issues for the 80s; (3) Tax Policy: What Do Families Need? (4) Prevention of Alcohol Abuse in American Families; (5) Emerging Trends in Mental Health Care for Adolescents; (6) Learning from the Private Sector: A Dialogue with Foundation Executives; (7) Child Care: The Emerging Insurance Crisis, Parts I and II; (8) Melting Pot: Fact or Fiction? (9) Child Victims of Exploitation; and (10) Children and Families in Poverty: Beyond the Statistics. In addition, the Committee was involved in a joint hearing concerning sudden infant death syndrome. Following the listing of activities are summaries of the major findings of each hearing, their corresponding fact sheets, and a list of witnesses and those who submitted testimony for the record in 1985. Also provided are excerpts from three of the reports issued by the Committee in 1985: "Opportunities for Success: Cost-Effective Programs for Children"; "Tax Policy: How Do Families Fare?" and "Teen Pregnancy: What is Being Done? A State-By-State Look." A report of dissenting minority views concludes the volume. (RH)

Identifiers—California
Intended to help various segments of the community, including parents, senior citizens, local representatives of business and industry, retired teachers, and college students in the quest for quality schooling for all children, this directory contains information on intergenerational programs located throughout the state of California. Program listings are divided into four general categories: school-based, community/agency-based, employment-based, and child care programs. The listings provide such information as program ideas, funding sources, and people (including phone numbers and addresses), who are involved on a day-to-day basis in programs that contribute to a greater understanding between youths and older adults. The directory does advise that, in most cases, Department of Education personnel have not visited or validiated the particular programs described. (HOD)

Identifiers—California
Designed as the first in a proposed set of three documents to be used to review elementary school programs in California, this guide describes the quality criteria used to judge program effectiveness for students. Criteria for a quality school program are provided in 13 areas: reading; written language; school effectiveness; special needs; oral language; mathematics; science; history-social science; visual and performing arts; learning environment; staff development; leadership; and planning, implementing, and evaluating the school program. The focus of each of the 13 criteria is described, and specific ways of meeting each criteria are listed. (HOD)

Identifiers—California
To be used in conjunction with a document providing evaluation criteria for quality elementary school programs, this guide is designed to help members of a program review team conduct a program review. The first chapter describes the methodology and procedures of program review, the application of quality criteria to the school's curricular and instructional program, and the means by which suggestions for increasing the effectiveness of the instructional program might be developed. The second chapter describes the quality criteria and contains cautions for reviewers about the application of the criteria to the school program. The final chapter describes how the transaction between the review team and the school results in a design for improving the program offered to the students. (Appendices contain the quality criteria and a guide for schools conducting a self-study.) (HOD)

Identifiers—*Self Awareness

Designed to assist consumer and homemaking education teachers and district administrators in California to initiate, expand, or integrate parenting programs in their secondary schools, this publication consists of eight chapters. Most of these, after a brief introduction, are divided into two or more sections, with accompanying activities. Each section contains learning objectives, key generalizations, and an outline of the activities described in the section. Many of the activities are designed for the immediate use of students, and both teacher and student directions are included. Activities described should be appropriate for students in schools that serve economically depressed areas. Chapter 1 focuses on knowing oneself and relating to others. Chapter 2 discusses parenting roles and health decisions. Chapter 3 concerns differences and similarities among families and family changes and coping with such changes. Family roles and structure, family interaction, and family support systems are the subjects of chapter 4. Parenting skills, the general topic of chapter 5, is divided into sections dealing with prenatal development, birth options, children's developmental stages, parenting techniques, learning experiences for young children, activities with children, health and safety, types of child care centers, and careers in child care. Concerning family challenges and turning points, chapter 6 focuses on coping and various challenges. Chapter 7 takes up the topic of the younger generation parenting their parents. Chapter 8 concerns community resources available to help individuals and families. (RH)

**Classroom Observations of Three Behavior Management Programs.**

Pub Date—28 Apr 86

Note—12p.

Pub Type— Reports - Descriptive (141)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—Behavior Problems, *Classroom Techniques, *Discipline, *Elementary School Students, *Elementary School Teachers, Grade 5, Grade 6, Intermediate Grades, Learning Disabilities, *Student Behavior, *Teacher Role

Three approaches to classroom management–assertive discipline, cooperative learning, and behavior management/mastery learning theory–are described. Assertive discipline was observed in a fifth-grade class taught by a teacher who would not allow students to interfere with her teaching or another child's learning. The assertive discipline approach is a system of understanding the rules of the class and accepting the consequences related to obeying and disobeying them. Cooperative learning was observed in a sixth-grade class during a lesson on "put-downs." Cooperative lessons involve content, social skills, and processing elements. Within each lesson ground rules were established. The classroom teacher led students through a five-step lesson plan that included an anticipatory set focusing on what "put-downs" are; instruction, including getting information and modeling; guided practice; and closure, including a final check for performance; and independent practice leading students to use "I-messages" instead of "putdowns." Use of behavior management and principles derived from mastery learning theory were observed in classes serving learning disabled students with severe behavior problems. This program stresses rules and consequences for student behavior through consistent and fair awarding of privileges and assignment of consequences. It is concluded that each program discussed can potentially be effective in managing classroom behavior. (RH)

Descriptors—*Academic Achievement, Demography, Educational Practices, Elementary Education, Failure, *Grade Repetition, *Meta Analysis, *Program Design, *Program Effectiveness, Social Adjustment, Student Attitudes, Student Behavior, Success

Identifiers—*Research Results

Meta-analysis of 17 studies was conducted to determine the effectiveness of retaining elementary school students in grade. Calculations with data from the 17 studies produced 217 effect size measures, most of which were measures of differences in reading and mathematics achievement. Some measures of differences in social adjustment, behavior, and attitude toward school were included in the sample of studies. Results provided support for the conclusions of an earlier study revealing that research evidence consistently points to negative effects of nonpromotion and arguing that proponents of retention plans are thereby obligated to show how their retentions plans will be successful when so many other plans have failed. Whereas some studies included in the meta-analysis showed positive outcomes of retention on academic achievement, the positive results appear to be found among middle-class, suburban, predominantly white samples and to be due to program characteristics related to the provision of individualized remedial help. It is concluded that such help can be provided through part-time pull-out programs, thereby avoiding the multi-billion dollar yearly expense of grade retention. (RH)

Identifiers—*Defense Mechanisms, Developmental Patterns, *Normal Children

Investigated were similarities and differences in the ability of 26 normally developing and 26 conduct-disordered children and adolescents to comprehend psychologically defensive behavior and the cognitive processes underlying differences due to age. Matched by cognitive level, subjects viewed vignettes depicting another child behaving defensively. Their answers to standard questions were evaluated against Chandler and his colleagues' Piagetian logical/structural analysis of eight defense mechanisms in three categories of increasing logical complexity: inversion (repression and denial); reciprocity (rationalization, displacement, turning against the self, reaction formation); and negations of joint propositional statements (projection and introjection). It was hypothesized that (1) if logical-/analytical reasoning is the necessary prerequisite for comprehending irrational/defensive behavior, then normal and disturbed youngsters matched for logical/analytical ability ought to perform equivalently and (2) the ability to comprehend psychological defenses of increasing logical complexity ought to be systematically related to cognitive stage level for both normal and disturbed subjects. Contrary to Chandler and colleagues (1978), results indicated that although both normally developing and disturbed formal operational subjects found reciprocals easiest, the disturbed found negations of joint propositions easier than inversions, and the normally developing found inversions easier than negations of joint propositions. Implications are discussed. Two pages of references conclude the document. (RH)

Descriptors—*Basic Skills, *Compensatory Education, Elementary Education, *Elementary School Students, Grade 3, Grade 4, *Grade Repetition, Longitudinal Studies, Program Effectiveness, *Remedial Programs, State Programs, *Testing Programs

Identifiers—*Louisiana

One of a series of studies examining Louisiana's compensatory education program, this study investigated four assumptions upon which a skill-specific intervention program was based. Framed as questions, these assumptions are: (1) Is retention effective for students who do not know basic content for a given grade level? (2) When is retention most effective among students who fail to meet prescribed minimum performance standards at each grade level? (3) How do students who have not attained minimum skills required at their grade level but who are promoted perform on the next level? (4) Does early identification and skill-specific intervention prevent later difficulties? Data was obtained from elementary school students whose scores in Louisiana's 1982 Grade 2 Basic Skills Testing (BST) program indicated that they were qualified for compensatory education and who were tracked through 1983, 1984, and 1985. In 1983 promoted and retained subgroups emerged in the data, each of which was further divided on the same promoted/-retained basis in 1984 and 1985. The report of results includes a summary of 1982-1985 BST attainment rates of initial 1982 qualifiers and a discussion of the effects of retention at various grade levels. Findings suggest that students have fewer difficulties attaining grade-level basic skills when they are both retained and promptly provided remediation. (RH)

Descriptors—Demography, *Elementary School Students, Intermediate Grades, *Negative Attitudes, *Overachievement, Rural Youth, *School Attitudes, *Student Attitudes, *Underachievement

Identifiers—West Virginia

Richards, Gaver, and Golicz (1984) found that, in contrast to peers whose grades were accurately predicted from performance on aptitude tests, both extremely underachieving and extremely

overachieving fourth-graders had negative academic attitudes. The present study aimed to replicate and extend these findings. Subjects in the replication study were predominantly from lower-class, rural homes, differing from the suburban, middle-class sample of the original study. In the replication, 30 fourth-grade, 71 fifth-grade, and 80 sixth-grade students were administered the Elementary Form of the Estes Attitude Scales and the Science Research Associates battery. Also, end of year mathematics, reading, and science grades were obtained. Results of regression analyses and one-way analyses of variance did not replicate the findings of Richards and colleagues, as far as overachievers were concerned: at every grade level extreme underachievers displayed the most negative attitudes and extreme overacheivers displayed the most positive. The discrepancy between findings of the original and those of the replication study is speculatively attributed to demographic differences in the samples. (RH)

**John Dewey Revisited and Community-Based Curriculum.**

Pub Date—[81]

Note—20p.

Pub Type— Opinion Papers (120)

**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—Childhood Needs, Community Role, *Curriculum Development, *Early Childhood Education, *Educational Philosophy, *Experiential Learning, Individual Development, Learning Processes, Learning Strategies, *Learning Theories, Lifelong Learning, School Community Relationship

Identifiers—*Community Based Education, *Dewey (John)

John Dewey proposed a transactive educational process in which personal experiences and development interacted with curriculum in order to transform the learner and the learning procedure. The purpose of this paper is to demonstrate ways in which some of Dewey's concepts of progressive education provide a theoretical rationale for the increasing use of early childhood education community-based curriculum. Dewey's original writings on children and curriculum were used as the basis for this discussion. It is argued that, with the support of educational continuity, a predisposition to form habits and the ability to form contextual images, young children construct their own knowledge through experiences in community-based curriculum. Descriptors—Children, *Cognitive Processes, Educational Objectives, Elementary Secondary Education, *Metacognition, Models, *Parent Role, *Problem Solving, *Remedial Instruction, Teacher Role, Theories, Training

Identifiers—*Feuerstein (Reuven), *Instrumental Enrichment

This paper discusses two primary instructional goals of Feuerstein's instrumental enrichment approach to remedial educational interventions. The instrumental enrichment approach is a method of classroom intervention directed toward helping students acquire the logical and psychological prerequisites of independent formal thought. The first and most basic aim is that of promoting structural cognitive modifiability by emphasizing the involvement of students in effective mediated learning experiences designed to increase metacognitive awareness. The second major objective of the program is the development of efficient, systematic thinking and problem-solving skills by exposing students, regardless of specific etiology or mental dysfunction, to situations demanding employment and adaptation of new, innovative, efficient, and relevant mental strategies. The paper also compares Feuerstein's approach with other cognitively-oriented programs, focusing on issues such as theoretical framework and affiliation, practical application, and research-related issues. A short review of the literature in the area of metacognition is included. (Author/RH)

Descriptors—*Criteria, Day Care, Early Childhood Education, *Educational Equipment, Elementary Education, Infants, *Instructional Materials, Planning, Purchasing, *Selection, Teacher Developed Materials, Teacher Role, Toddlers, *Young Children

Based on the view that the classroom teacher is the best judge of materials and equipment to meet the needs of particular learning situations, this publication focuses on the selection of equipment and materials for children in group settings. Part I consists of four substantive articles concerning (1) materials selection from the points of view of elementary school principal and classroom teacher; (2) the importance of careful planning in equipping a center or school; (3) the importance of providing teachers with workshops/facilities in which they can prepare instructional materials; and (4) the relative merits of purchasing ready-made and making one's own equipment, and criteria for deciding the issue. Also included in Part I are lists of criteria for selecting single items of equipment and materials as well as packaged instructional materials. Part II suggests educational equipment appropriate for an infant group, a nursery school group, a kindergarten group, early elementary school groups, and later elementary or middle school groups. It is anticipated that parents will also find the information useful, since much of the equipment and materials, particularly for the younger age groups, can be adapted for use in the home and many of the items can be made or "scrounged." **Peer Preferences in Toddlerhood: Influences of Friendship and Activity Context.**

Pub Date—[85]

Note—39p.

Pub Type— Reports - Research (143)

**EDRS Price - MF01/PC02 Plus Postage.**

Descriptors—Day Care Centers, Early Childhood Education, *Friendship, *Peer Relationship, *Play, Sex Differences, Sex Role, Social Behavior, *Socialization, *Toddlers

Identifiers—*Cross Sex Interaction, *Same Sex Peers

Are children's same-sex affiliations due to genetically sex-linked behavioral tendencies or are they a result of power and privilege differentials in the larger society that discourage girls from engaging in cross-sex interaction? Sex cleavages in naturally occurring toddler peer groups were investigated by examining playmate preferences and differential initiations and responses within activity contexts and to friends. Three types of initiations and their responses were examined during the free play of 46 toddler-age children in the three Los Angeles day care centers. The three nonspecific friendly initiations, and agonistic initiations. The findings replicate the results of earlier studies suggesting that toddler-age children prefer same-sex playmates. Boys were more likely to ignore or refuse girls' initiations when the initiations took the form of specific requests to play a game rather than a more general approach. These findings support the hypothesis that sex cleavages within very young peer groups are based on differential socialization experiences of boys and girls rather than on sex-linked behavior tendencies. Identifiers—*De La Salle Vocational Day Treatment Center PA

Serving as a course planning guide and field aide, this handbook describes the philosophy, policies, and procedures of the De La Salle Vocational off-campus community-based day treatment center designed to effect the reshaping of basic values and attitudes of youngsters who are identified by the courts as maladjusted. Separate sections explain the objectives and activities of the stress/challenge, service learning, adventure learning, and community-based experiential learning courses. Six sections outline policies and procedures which incorporate appropriate educational, legal, practical, and financial considerations. The policies/procedures sections are as follows: (1) student/parent course preparation (registration, medical history, consent to emergency medical treatment, parent information bulletin, clothing and equipment list, risk/hazard letter, expectation sheet, review of letter, preparation interview, equipment sign-out); (2) emergencies (accident reporting, medical care); (3) academics (course file, course log, course credit, report cards, awarding course credit, student evaluation); (4) finances (projected budget, purchase orders, check request, cash purchases and accounting for cash, actual expense recording, receipt accountability, compensation time); (5) student management (search of student property, written warnings, sending a student home, student runaways, free time, student money on courses, radios, cigarettes, tokens, hall passes); and (6) logistics (starting time, staff sign-in sheet, box lunches, final notification, transportation, off-campus check list). The handbook's final section concerns evaluation (final report, instructor evaluation). Appendices contain 20 sample forms. (NEC)

Descriptors—Administrator Responsibility, Compliance (Legal), *Cooperative Programs, *Cooperatives, Delivery Systems, Educational Cooperation, Elementary Secondary Education, *Models, *Needs Assessment, Rural Education, *Rural Schools, School Districts, *Special Education

Identifiers—*South Dakota

The design of a needs assessment model to establish the existing status and requirements of general and special education in eight small rural South Dakota districts interested in forming an education cooperative involved: (1) synthesizing major areas of need into workable components; (2) designing a needs assessment instrument based upon these components; (3) identifying a balanced sample of educators, parents, and board members to respond to the instrument; and (4) analyzing the responses and summarizing the findings. The areas of need identified for the questionnaire included establishment of organizational and administrative responsibilities, compliance with state law, and enhancement/sharing of current general/community education and special education offerings/practices. Emphasis was placed upon potential expansion areas which would improve services beyond minimum mandated state requirements for curriculum, financing, staffing, scheduling, and transportation. Four separate color coded formats of the resulting questionnaire were

administered to a total of 114 persons, representing superintendents (8), special education teachers (13), principals (16), counselors (8), elementary/secondary teachers (58), students (1), parents (2), school board members (7), and school psychologists (1). The process provided a viable, systematic means to analyze school district perceptions so as to provide administrators with data to establish/expand educational services cooperatives. (NEC)

Identifiers—Canada

Rural-based special educators are examining the use of microcomputer technology to provide service to special education students. Recent literature is replete with examples of situations where microcomputer telecommunications have altered the isolation of special need populations in areas of communication, computer access, environmental control, and mobility. Exemplary networks include SpecialNet, INTELSAT, SHARE, the Kentucky Project, DEAFNET, CONFER, and MERIT. Telephone-based data-communication systems, utilizing standard telephone utilities, can tap services of global telephone networks and place isolated users in instant liaison with selected partners. Such systems require microcomputers and modems, optional printers, plus appropriate software. Almost 350 data repositories are available for accessing by microcomputer and modem, including DIALOG, BRS, and SpecialNet which offers electronic mail, bulletin board, and data collection/information management services targeted specifically to those involved in special education. An example of a small-scale, service-oriented electronic network is Prairie Post, a bulletin board developed by the Rural Special Education Outreach Project, University of Lethbridge (Alberta, Canada). Although microcomputers have already demonstrated their ability to support improved initial learning and transfer of knowledge organized and delivered by competent teachers–and are already present in many schools–appropriate utilization and equitable distribution to handicapped students will require vehement advocacy by special educators. Identifiers—*Alberta, Committee on Tolerance and Understanding (Canada)

The Committee on Tolerance and Understanding reviewed the current state of Native education in Alberta in the context of six principles: respect for diversity, parental involvement, rights of the child, mission of education, role of public education, and shared experiences. The investigation revealed that Alberta Natives are still suffering from intolerance and a lack of dignity and respect, Native parents face extra barriers to effective involvement in education, society is failing to ensure that Native children receive an education of no less than minimum acceptable standards, public education is failing to instill self-esteem in Native students, and increasing involvement in their own education may result in a growing isolationism of Native peoples. The Committee recommended preparation/adoption/implementation of a Native education policy which includes specific proposals on curriculum, teachers, parental and community involvement, and program development. The objectives of this policy should: enable Native children to reach their full potential and achieve parity within the public education system; ensure Native culture/history is adequately/accurately reflected in curricula; preserve Native languages/cultures; encourage Native participation in the education system; develop programs consistent with aspirations of Native communities and student needs; and support local initiatives in providing alternative programs to counteract high dropout rates. Identifiers—Canada, Manitoba

Attention to small schools in Manitoba reflects concern for rural development, recognition of cultural pluralism, awareness of benefits of small town living, and a growing scepticism about benefits of consolidation which have led to an appreciation of traditional small school educational practices. The challenge for small school educators is to insure that the increased attention is properly directed so that small schools will endure when interest wanes. Information from large urban schools cannot be used as benchmarks to examine small rural schools, and established theories of administration cannot be applied to a small rural context. Small schools differ from large schools not only in size, but also in environment and community factors. Rural school staffing problems may require certifying teachers for small schools, matching teacher characteristics with small school needs, and developing inservice activities. Development of curriculum materials for small rural settings must assume that small is unique, that more resources to buy more materials is not the only answer, and that students should receive quality materials designed for them and delivered in ways appropriate to the environment. Improvement of small school education includes placing responsibility for change upon the community with support from, but not dependency on, central educational agencies. (LFL)

A positive critique of three studies on cultural assimilation of Mexican Americans ("Dimensions of the New Immigration to the United States and the Prospects for Assimilation" by Douglas Massey, a series of articles by Miriam Wells, and "Language, Mexican Immigration, and the 'Human Connection': A Perspective from the Ethnography of Communication" by Jose Limon) argues that three key terms in assimilation studies–biologism, primitivism, and voluntarism–need replacement with a broader sense of agency, the analysis of cultural practices, and the study of racism. Voluntarism suggests that the assimilation process, both successes and failures, involve formally free choices within a socially given opportunity structure and should be displaced, in the author's view, by the analysis of racism. Primitivism suggests that assimilation is the movement from an authentic culture that is regarded as if it were a relic to be preserved just as it was, when, in fact, cultures undergo ongoing processes of change, making the notion of linear movement of assimilation from Mexican to Anglo problematic. Biologism suggests that people, as they become middle class, follow middle class norms of family size and occupation and conflates with class and culture, for such people may not be assimilated, but simply middle class. Descriptors—Black History, *Blacks, Comparative Analysis, *Cultural Differences, *Employment Patterns, Ghettos, Mexican American History, *Mexican Americans, Minority Groups, Occupational Mobility, Racial Segregation, *Residential Patterns, *Urban Population
Identifiers—Barrios, *Chicanos

Comparative analysis of urban history illuminates similar general patterns of occupation and residence for Blacks and Chicanos from the late nineteenth century to World War II. Distinct Black and Chicano neighborhoods in American cities were the products of "ghettoization" and "barrioization." Ghetto expansion during the early twentieth century was the result of rural-to-urban migration of southern Blacks, while barrios emerged because of the massive immigration from Mexico due to economic and political upheavals of the Mexican Revolution. While more overt racial legislation was directed toward Blacks, indices of residential segregation, socioeconomic status, ghetto and barrio subculture, segregative real estate covenants, and other similarities clearly emerge from comparative analysis. Analyses of occupational structure and immobility over time provide evidence that further distinguishes these two minorities from European immigrant groups. Although Blacks and Chicanos suffered similar disadvantages in the urban labor market as had prior immigrants (rural handicaps, lack of education, lack of job skills), additional circumstances of race and class that created and maintained their residential segregation account for their occupational segregation and immobility at the bottom of the occupational hierarchy, with males in unskilled, menial labor and females in domestic services. Identifiers—*Chicanos, *Chicano Studies

The essay discusses seminal contributions to the field of "new" Chicano history of the 1970's which focused on urban themes, labor and the working class, and women and were produced by a young, formally trained corps of historians (some Latin American, but increasingly United States historians), principally from the major universities of the Southwest, who asked new questions as they ana-

lyzed standard interpretations and previously unsubstantiated theses. Publications assessed included historiographic review articles by Arthur Corwin, Juan Gomez-Quinones, and Luis Arroyo and general Chicano history texts by Carey McWilliams ("North from Mexico") and Rodolfo Acuna ("Occupied America"). Among the four categories of studies analyzed are community studies, studies of the working class and urban occupational structure, institutional and political studies, and studies on the conceptualization or analysis of Chicano urban history. Key anthologies exploring the reality of Chicanas within the Mexican community and larger society are identified. Several period studies covering the 19th and 20th centuries are noted. This review suggests that the prognosis for the continuing development of new Chicano history is excellent if working historians remain on the cutting edge of research and are innovative in their interpretations, conceptualizations, and methodological approaches. Identifiers—*Americans (United States), Associative Group Analysis, *Colombians, United States
This "communication lexicon," a new source of information in the field of language and area studies, describes how selected themes such as family, society, work, and entertainment are perceived and understood by members of the Mexican, Colombian, and United States cultures. It identifies broad trends of perceptions and evaluations through analysis of related themes. The awareness it provides of differences in perceptual and motivational dispositions can be applied to educational and training tasks which require cultural sensitivity and interpersonal skills. Information is based on Mexican and United States student samples tested in Mexico City and Washington, D.C. A parallel presentation is based on a comparable Colombian sample. Introductory chapters discuss problems of cultural understanding and how research information can be used in communication strategies. Chapters 3-12 present Mexican and American images and meanings from themes of Family/Self, Friendship/Understanding, Community/Society, Love/Sex, Religion/Mortality, Education/Upbringing, Economy/Money, Work/Achievement, Government/Politics, and National/Ethnic Images. Graphs are used to show differences and similarities. General trends across several themes reflecting perceptual and motivational dispositions are discussed in chapter summaries. The original response lists arranged in semantically related clusters for each theme are provided in Appendix 1. The Associative Group Analysis method used to collect and interpret research data is discussed in Appendix 2. (FL)

This multi-age integrated teaching unit on weather was developed by 19 rural teachers (grades K-8) from 12 Gallatin County (Montana) districts to associate all school subjects with a common theme, promote teaching efficiency by focusing on more than one subject at the same time, and increase student excitement. Topics explored by each grade level are seasons (grades K-1), effects of the weather on us (grade 2), precipitation (grade 3), clouds (grade 4), weather recording-forecasting (grade 5), water (grade 6), climates and global effects (grade 7), and occupations (grade 8). Core activities are outlined for each grade level in reading/language arts, mathematics, science, social studies, art, music, and physical education. The lesson plans consist of a general focus statement, specific behavioral objectives, designated classroom activities, lists of materials needed, and a teacher log section. Lists of vocabulary words are included in each unit with some coded to a key for word attack through structural analysis. Accompanying each unit is a list of available resources, both material and human. Evaluation worksheets to be utilized when assessing student performance on specific objectives are included. (NEC)

Topics explored by each grade level are space travelers (grades K-1), the solar system (grade 2), the moon (grade 3), galaxies (grade 4), comets (grade 5), exploration in space (grade 6), astronomy (grade 7), and science fiction (grade 8). Core activities are outlined for each grade level in reading/language arts, mathematics, science, social studies, art, music, and physical education. The lesson plans consist of a general focus statement, specific behavioral objectives, designated classroom activities, lists of materials needed, and a teacher log section. Lists of vocabulary words are included in each unit with some coded to a key for word attack through structural analysis. Accompanying each unit is a list of available resources, both material and human. Evaluation worksheets to be utilized when assessing student performance on specific objectives are included. (NEC)

Identifiers—Rural Schools Integrated Curricula Project MT
This curriculum unit on oceans for grades K-8 contains lesson plans, vocabulary lists, core activities, resource lists, and a student evaluation worksheet developed by rural Gallatin County, Montana, teachers as part of an inservice Rural Schools Integrated Curriculum Project administered by the Montana State University College of Education. The integrated approach serves the need of small rural multigrade classes for a unified approach to teaching and learning. The curriculum unit is designed so that teachers can expand it to accommodate all school subjects and specific student interests. Rationale and seven general objectives are followed by a list of core activities in reading, math, science, social studies, art, music, and health/physical education for each of three sub-units–plants and animals, industry, and transportation. Lesson plans organized by school subject and sub-unit are further divided into grade levels and lesson objectives. Each lesson plan lists objectives, activities, resource materials, and, where appropriate, instructions for an experience chart as well as a scope of lesson statement. Lesson plans separate activities by grade level where appropriate as well as offer integrated activities for all grades. A vocabulary list and resources list are divided by subject and K-4/5-8 grade levels. (LFL)

Identifiers—*Montana (Gallatin County), Rural Schools Integrated Curricula Project MT
The thematic, integrated subject curriculum presented in this comprehensive teacher's guide is based on a study of Gallatin County's local history and is intended to enrich students' perceptions of their rural Montana culture, heritage, and environment, and provide them with a knowledge base for decision making about the future. Introductory material describes teacher involvement in the curriculum development process and gives the rationale for teaching the unit. Part 2 lists sub-units of the original theme organized by grade level as follows: wildlife, shelter–K-1; agriculture, ethnic backgrounds–2; folk lore, timber–3; early explorers, ranching–4; railroads, cities and towns–5; government, life styles–6; ecology, recreation–7; geography, Native Americans–8; education–K-8. Parts 3 and 4 list 18 broad goals for the program and outline specific types of activities to be developed in lesson plans. Activities are listed by sub-unit for each grade level under the subject headings of reading, language arts, mathematics, science, social science, art, music, and health/physical education. Part 5, the bulk of the guide, provides lesson plans that designate behavioral objectives, procedures to follow, and materials needed. Parts 6-8 contain appropriate vocabulary to be taught for each sub-unit, a guide to available human and material resources, and a sample format for assessing student performance on specific objectives. Descriptors—*Budgeting, County Officials, Decision Making, *Human Services, *Local Government, *Public Agencies, *Retrenchment, Rural Areas, *Rural Urban Differences, Social Services
Identifiers—*Impact, Impact Studies, Public Services, Washington
Three metropolitan and five rural counties in Washington State were studied to determine relationships between budget change decisions--particularly expenditure decreases--and public service consequences. Demographic, economic, social, and budget data for 1979-1982 from census sources, state and county agency reports, and 214 questionnaire responses from public services officials were used. Annual expenditures were found to have increased for most agencies throughout the period. Judicial, law enforcement, and correctional units received consistent increases; environmental protection, parks, and recreation tended to be cut drastically. General government, social/health services, physical services, education, planning, and community development remained relatively stable. State-mandated requirements and priorities of local officials were among the major factors in budget allocations. In general, public officials perceived that little had been lost in service quality or quantity, although maintenance of plant, equipment, and capital outlays were thought to have suffered seriously. While no definitive conclusions could be drawn from the study, improvements in staff efficiency and creativity and greater cooperation among county departments, along with a worsened staff client ratio and less ability for long-range planning were some noted outcomes. Variables such as urbanness, socioeconomic conditions, expenditure changes, and outcomes perceptions showed less intercorrelation than anticipated. Tables provide county and budget data, categories and comparisons of outcome variables, and correlation matrices of antecedent, intervening, and outcome factors. (LFL)

Descriptors—Change, Change Agents, Change Strategies, *Intellectual Disciplines, *Professional Recognition, Rural Areas, *Social Change, *Social Theories, Sociology
Identifiers—*Rural Sociology, *Sociologists
Rural sociology needs a conceptualization of social change and its implications for the discipline. Scientifically adequate conceptualization would enable rural sociologists to understand their own and others' social roles as activities which are aspects of social change. With this understanding the rural sociologist could conceive of his practical experience not just as effort to implement policy or achieve goals but as raw evidence pertinent to generalizations about social change and significant for the discipline of general sociology as well as for his own degree of success or failure as a rural sociologist. Five related orders of social change have relevance to the performance of rural sociologists. First order changes pertain to bases for motivation viewed from a psycho-social perspective on individuals. Second, third, and fourth order changes encompass aspects of relationship between and among people in the context of a society. Fifth order changes embody changes in systems of symbols used to legitimize behavior. This conceptualization of social change is relevant for rural sociologists insofar as they use it to take perspective both on their participation in social change while contributing to the achievement of imperative functions and on change which they engender in others whom they influence. Identifiers—*New Mexico
Teachers and administrators in rural New Mexico schools and preservice teachers at New Mexico State University were surveyed to determine components that could be included in teacher education programs to augment prospective rural teachers' skills and to ease problems of recruitment/retention of certified personnel in rural schools. Questionnaires from 169 rural public elementary/secondary school teachers provided information on experience, certification, training, teaching conditions, and ways of staying up-to-date professionally. Questionnaires from 16 administrators addressed preparation for administering rural schools, teaching/administrative experience, staying professionally current, and acquisition and retention of certified teachers. Opinionnaires from 108 preservice teachers addressed adequacy of teacher training for rural educators, students' perceptions of rural schools, number of credits earned in specialties, and professional development. The study found that: 98.2% of teachers and 75% of administrators were certified, rural educators tended not to be transient, certification requirements did not adversely affect rural educators, 43.8% of the respondents taught multigrade classes, and 54.4% of respondents felt teacher training prepared them for rural teaching. Data on the surveyed population, schools, and professional characteristics are presented in summary and tabular form. Questionnaires and lists of school districts form the appendix. (LFL)

Identifiers—Counties, *South Dakota
Based primarily on 1980 census data, the bulletin presents five sets of tables which describe changes in population which have occurred in South Dakota as a result of migration into and out of the state. Table 1 provides state of origin/destination, rank, number, and percentage data on migration into and out of South Dakota from 1975-80. Figures indicate 69,514 persons moved to the state and 90,019 moved out of the state during this period, with Minnesota being the leading state of both origin and destination. Table 2 shows the age, number, and rate of net migration for South Dakota from 1960-70 and 1970-80. For both decades, statistics indicate that the highest rate of migration occurred among 25-29 year-olds leaving the state. Table 3 contains net migration figures for South Dakota by age and sex for 1970-80. Table 4 presents numbers and rates of population change by county from 1970-80, revealing that 13 of 66 counties experienced increases in population ranging from 1.7% to 23.7%, while the remaining 53 counties witnessed population decreases ranging from 1.5% to 28.5%. Table 5 enumerates numbers and rates of net migration by age group and sex for each South Dakota county from 1970-80. (NEC)

Descriptors—Administrator Guides, Costs, *Educational Economics, Educational Equipment, Educational Facilities, *Educational Finance, Financial Problems, Fund Raising, *Money Management, Operating Expenses, *Retrenchment, School District Spending, School Funds, School Schedules, *Small Schools, Staff Utilization
This paper is a checklist on ways to save money targeted to administrators of small rural schools but appropriate to schools of any size. Tips concerning staff include salary issues, early retirement, time management techniques, involving staff in budget and facilities planning, and utilizing limited-experience teachers, teacher-administrators, and volunteers. Adjusting length of school day and year, eliminating study halls, combining small enrollment grades, offering some secondary classes in alternate years and reducing time spent on testing and discipline are mentioned. Tips on equipment and facilities include contracting specialty and janitorial services, using mobile libraries and portable classrooms, leasing school buildings, reducing vandalism and fuel consumption, and employing student help. Suggestions for generating funds include school stores, vocational class products, adult evening classes, wise investments, cooperative buying, cooperative application for federal aid programs, community support of school projects, and local donations. Other tips cover materials selection, community involvement, and school board policies. (LFL)

Identifiers—*Issues Approach, *United States (South)
The papers in this monograph represent the collective comments of speakers at a January 1986 conference addressing emerging issues in the rural economy of the South. The opening paper suggests that prospects for rural southern economic development are tied to new business development, new agricultural products, automated traditional manufacturing, tourist and retirement development, growth industries, foreign investment, vocational education and retraining, financial services, defense spending, and foreign markets. Next, employment patterns in the nonmetropolitan South are presented and discussed. The third paper reviews the role of agriculture in the transformation of the national and southern economy since World War II and provides statistical data and tables illustrating changes in unemployment, manufacturing, mining, farm debt-asset ratios, and land values. The remaining papers focus on four areas of concern: infrastructure and transportation, education, values and attitudes, and agriculture and the community resource base. These papers suggest the need for regional planning and collaboration; greater commitment to education, continuing education, and adult literacy; inclusion of racial and sex discrimination issues in economic development policy formation; and attention to issues such as farm/urban conflicts, land use, environmental regulation, local government finance, and changes in the price and/or availability of inputs. Third in a series on utilizing outdoor education methodologies to enhance the academic curriculum, the guide contains lesson plans and case studies for teaching grades 3-10 social studies. The lessons are designed to further student awareness of personal and social responsibility toward the environment through the use of outdoor experiences which may help students to understand abstract concepts and provide them with a sense of community, contrasting experiences, and opportunities to gain self-responsibility. The guide offers specific suggestions for planning, organizing, and conducting field experiences grouped by objectives, mechanics, site selection, direct involvement, followup/evaluation, problems, and tips for conducting lessons outdoors. Eighteen sample lesson plans present topics such as people watching, value survey, map skills, exploring old farms, restoring native vegetation, seeing a city block, and energy costs. Each lesson plan states the problem, lists objectives, provides an introduction to the topic, describes procedure/activities, and lists evaluation questions. Four case studies illustrate using outdoor experiences to teach pioneer heritage, energy conservation, archaeological research, and local environmental problem-solving. Addresses for further information are given for each case study. Books, curriculum guides, periodicals, and organization names and addresses are given in a 69-item bibliography. (LFL)

Identifiers—*Credit Accrual, Portable Assisted Study Sequence Program
A 1983-84 survey of migrant directors was conducted to provide information regarding the PASS (Portable Assisted Study Sequence) Program and to solicit recommendations regarding the role of the program in the secondary education of migrant students. Survey questionnaires were received from migrant programs in California, Arizona, Oregon, Arkansas, New York, Washington, and Wisconsin. Information collected concerned program management, eligibility requirements, number of students served, type of credit available, and curriculum. Based on the survey, five recommendations were made: (1) PASS should remain an option as supplemental curriculum solely reserved for Chapter 1 eligible students; (2) copyrights of PASS curriculum materials should be obtained; (3) the program should be shared with major sending and receiving states to facilitate continued study and credit accrual when students leave the sending state; (4) PASS should be included in the Migrant Student Record Transfer System training process in the states involved; and (5) curriculum should continue to be expanded, updated, and revised to meet the needs of migrant secondary students. (JHZ)

Descriptors—Camping, Comparative Analysis, Cost Effectiveness, Costs, Expenditures, *Income, *Operating Expenses, Outdoor Education, *Resident Camp Programs, *Salaries
Identifiers—*Operating Ratios
Directors of 87 resident camps affiliated with the American Camping Association responded to a random sample survey and provided data to compile this first collection of camp operating ration tables. Fifty-three tables show average percentage of total, median percentage of total, average in dollars, and median in dollars statistics in 14 income and expense categories. Income ratio categories include camper fees, camperships, transport fees, activity fees, insurance fees, sales/trading post, sales/meals, rentals, contributions, interest/dividends, federal, subsidy, other, and total income. Expense ratios are given for salaries, payroll taxes, food and related, occupancy, camper transport, promotional, dues and fees, program, supplies, insurance, other administrative, proprietor, and total expenses. Each table also indicates average and median daily fees and average and median number of campers. Tables are arranged to show camp affiliation (private/independent, religious, agency/public), geographic location (New England, Mid-Atlantic, South, Midwest, West), camper population (boys only, girls only, coed), length of season, and size of budget (under $100,000, $100,000-$500,000, and over $500,000). Comparative salary data for various camp staff positions are also provided in nine tables. (NEC)

This comprehensive guide helps camp administrators prepare for camp accreditation and site approval visits by the American Camping Association (ACA). The introductory sections outline the purpose and administration of the standards program and provide definitions of camping terms. Standards are organized under one section for camp accreditation and another for site approval. Specific standards and their interpretation are listed one-per-page with a section for the camp director's evaluation of camp compliance and a section for indicating evidence of compliance. For camp accreditation, standards are listed under the headings of site, administration, personnel, program, and health care. Additional standards are included for aquatic, tripping, horseback riding, and travel programs. For site approval, standards are listed under the heading of basic, administration, personnel, health care, and aquatic. The appendix contains numerous sample forms needed for camp administration, e.g., personnel policies, comprehensive plan outline, statement of goals and objectives for camper development, employment contract, architectural barriers checklist, and health records. The appendix also provides ACA publications related to standards, a cross reference for current and prior ACA standards, and a directory of organizations offering support for camp administration. Descriptors—*Attitude Change, College School Cooperation, Elementary Education, *Elementary School Science, Inservice Teacher Education, Instructional Improvement, Physical Sciences, *Rural Education, Rural Schools, Science Education, *Science Instruction, *Teacher Attitudes, Teacher Effectiveness, *Teacher Improvement, Teaching Skills
Twenty-eight rural elementary teachers showed positive changes in attitude toward perceived competencies in teaching physical sciences and students showed statistically significant cognitive gains as a result of teacher participation in a 4-month project. Teachers attended four workshops, hosted three on-site visits by university science educators, developed instructional units, and shared accomplishments with a variety of audiences. A 44-statement Likert-type pre- and post-opinionnaire measured teacher attitudes toward perceived competencies in areas of content, curriculum and methodology in the physical sciences. A correlated t-test between differences in means was calculated for opinionnaire statements. Teachers administered a pre- and post-test to their science classes to assess student cognitive gains and a paired t-test was used to calculate differences in means for each class. Teachers showed gains in perceived competencies in knowledge and utilization of inquiry/process skills, curriculum, methodology, classroom management, computers, and metric measurement. Study results indicate that coordinated efforts between rural school districts and universities to improve science teaching in elementary schools need greater emphasis on helping teachers organize their thoughts and

activities around concepts in science. Tables provide correlated t-test scores for teacher opinionnaires. (LFL)

Identifiers—*Cultural Preservation, Cultural Resources, Historical Landmarks, Historic Sites, *Oregon, Resource Management
Designed for use by American Indian tribes, archaeologists, law enforcement officials, local/state/federal administrators in charge of cultural resources management matters, and the general public, this handbook has been compiled to serve as a practical guide to protecting American Indian cultural resources in Oregon. The book brings together information on all major state and federal antiquities laws for review and comparison. Parts I and II contain descriptions of major provisions of significant state and federal cultural resources laws affecting Indian burial sites, archaeological sites and objects, classification of historic properties, scenic waterways, and conservation easements with suggestions for their practical application. Parts III and IV provide information which may facilitate cooperation and coordination between tribes, archaeologists, agencies, etc., including identification of Oregon tribes and tribal contacts. Part V details information helpful in reporting criminal violations of cultural resources protection laws. Part VI is a bibliography of resources which may be helpful in gaining further understanding of cultural resources protection laws and designing and managing protection systems. Part VII presents copies of most state and federal statutes discussed in this handbook. With the exception of the Oregon Indian Burial Law and the American Indian Religious Freedom Act, all laws are equally applicable to non-American Indian cultural resources. (Author/NEC)

Descriptors—Elementary Education, *Elementary School Teachers, Multigraded Classes, *Noninstructional Responsibility, Public Schools, Questionnaires, Rural Education, Rural Schools, School Administration, *School District Size, *Small Schools, *Teacher Responsibility, Teacher Role, *Teaching Load
Identifiers—*Montana
Questionnaires completed by 374 teachers were used to determine differences in the instructional and noninstructional responsibilities of elementary teachers in very small, small, and medium school districts in Montana. Questions about instructional duties related to number of courses and grade levels taught, pupil/teacher ratio, teacher role in curriculum development, availability of specialists and administrative supervision, and clock hours spent in teaching and in-service training. Questions about noninstructional duties related to supervision of students and various administrative tasks. Data were analyzed using gamma to measure the association between school district size and the duty performed and were further analyzed to determine the duties performed more often by teachers in very small school districts as compared to teachers in small school districts. A comparison of duties of teachers in small and medium school districts was also made. Teachers in very small school districts were found to perform more instructional and noninstructional duties than either small or medium district teachers. Likewise, teachers in small districts performed more of the duties than teachers in medium districts. The majority of the differences were accountable between the duties reported to be performed by teachers in the very small and small districts. (JHZ)

Issues related to the use of distance education are discussed in this bulletin, which also summarizes the status of distance education in 26 countries of Asia and the Pacific. Section 1 contains a rationale for distance education and points out possibilities offered by advances in communication technologies. Section 2 gives country-by-country reports of distance education services available in the region. Primary and secondary, postsecondary, and teacher education are covered. Topics include learning materials, modes of instruction, and special needs linked with population and geography. Specific information is outlined for Afghanistan, Australia, Bangladesh, China, India, Indonesia, Malaysia, the Maldives, Nepal, New Zealand, Pakistan, Papua New Guinea, Philippines, Republic of Korea, Sri Lanka, and Thailand. Section 3 contains papers discussion China's use of distance education for higher education programs and the University of the South Pacific's experience with a satellite in distance education. A third paper presents guidelines for planning, operating, and evaluating a distance education system and offers specific questions and considerations for those responsible for planning new systems. Section 4 is a bibliographical supplement organized by country and listing over 100 annotated entries. (JHZ)

Descriptors—Adult Basic Education, Alaska Natives, American Indians, *Bilingual Students, Classroom Environment, *Cognitive Style, Comparative Analysis, Differences, Elementary Secondary Education, *Environmental Influences, Ethnic Groups, *Individual Differences, Influences, Measures (Individuals), *Performance Factors, Samoan Americans, Student Characteristics, White Students
Identifiers—Iranians, *Learning Preference Inventory, *Learning Style Inventory
A variety of research findings and observations concerning learning styles are compiled in this guide to help teachers understand the implications of their students' learning preferences. The first section describes the Learning Preference Inventory (LPI) as an instrument that asks the student to select among eight learning situations, e.g., lecture, tutoring, group learning, the one preferred for different types of learning activities. LPI results are reported for the following groups: American Samoan, Fort Belknap Reservation Indians, Iranian, Caucasian Alaskan, and Native Alaskan. Most groups consisted of Adult Basic Education students, but preschool, elementary, and secondary students were also studied. The second section describes the Learning Style Inventory (LSI), which analyzes learning preferences according to environmental, emotional, sociological, physical, and psychological factors. LSI results are reported for Iranian, Southeast Alaskan, and Southwest Alaskan groups. The third section summarizes 16 learning style studies concerned with bilingual students and environmental and physical factors. The final section presents a chart showing preferred learning styles for 10 student categories: independent and dependent, high and low self-concept, upper and lower grade levels, high and low reading achievement, and high and low mathematics achievement. Identifiers—Life Cycles, *Priorities, Satisfaction, *Texas
A 1983 survey of Texas homebuyers reveals a high degree of mismatch between the preferred and actual residence of homebuyers. Such mismatch is examined using social/psychological, life-cycle, racial, socioeconomic, and occupational factors as possible explanations. Questionnaires mailed to a stratified random sample of 960 homebuyers across 12 geographical areas of the state yielded 432 usable responses. Their analysis indicates that the logic of fulfilling residential preference is largely determined by the types of areas in which one prefers to live, neighborhood satisfaction, and the age of homebuyers. Preferred and actual residence mismatch is most common among homebuyers who prefer a suburban location, less so for people who prefer nonmetropolitan residences, and is lowest among people who prefer to live in central cities. The psychological argument that people tend to modify their preference in congruence with their neighborhood living experience is also supported; the proportion of fulfilled persons is highest among those who are highly satisfied with their current neighborhood. Finally, younger persons suffer a higher degree of residence mismatch than older persons. Such findings corroborate theoretical arguments advanced by students of population mobility. Some possible reasons are suggested to explain the failure to find evidence to support racial and socioeconomic arguments. (Author/NEC)

**Study of the Office of County Superintendent.**
Oklahoma State Dept. of Education, Oklahoma City.
Pub Date—1 May 86
Note—213p.
Pub Type— Reports - Evaluative (142)
**EDRS Price - MF01/PC09 Plus Postage.**
Descriptors—Administrative Organization, Administrative Policy, *Administrator Role, Case Studies, *County Officials, *Intermediate Administrative Units, *Occupational Information, *Organizational Effectiveness, Program Evaluation, Questionnaires, Rural Schools, State School District Relationship, State Standards, *Superintendents
Identifiers—*Oklahoma
Duties of 46 county school superintendents in Oklahoma were analyzed and occupational benefits of statutory provisions and additional activities were evaluated. Questionnaires, telephone and personal interviews, and on-site visits provided data. Statutory duties were found to be present in each superintendent's report and to be mostly clear and pertinent to current educational practice. The duty of evaluation of principals was unclear. Services initiated by superintendents or invited by constituencies were more time-consuming than statutory duties. Services included staff development, cooperatives, library services, and academic contests. Reports from each county provide statistical data including area; income; number of districts, students, teachers, and administrators; summary of

duties and responsibilites; and list of additional services. Funding data, school populations, and dependent district characteristics are summarized for all counties. Seventeen recommendations cover utilizing the county superintendent's office in cooperating with the state department of education, administering dependent schools, and meeting additional duties, responsibilities, and functions. Appendices comprise half the report and provide tables, graphs, lists, and maps about county superintendents and dependent districts, survey questionnaire and compilation of responses, funding and students served by county, dependent districts and administrators by county, additional services by county, and rating of educational benefits of statutory duties by county. Descriptors—*Adjustment (to Environment), Attitude Change, Community Attitudes, Community Satisfaction, Comparative Analysis, Environmental Influences, *Life Satisfaction, *Rural Areas, Rural Development, Rural Population, *Social Theories, Values, *Well Being

Identifiers—*Boomtowns, Colorado, Impact, Impact Studies, *Life World, Utah

Three intermountain communities in Colorado and Utah were studied to determine the impact of rapid development on residents of rural communities, especially on their views of the world and their personal well-being, and to assess the degree to which energy boomtowns experience the social disruption suggested in the classical boomtown studies. Two models of boomtown development were employed: the disruption model, which predicts that changes in the "lifeworld" (a concept borrowed from Gadamer-1975, and Habermas-1981) will be accompanied by a decline in well-being; and the systemic model, which predicts that the system-structure of a community will preserve lifeworld and well-being. Data were collected via questionnaires completed by 443 residents of the three communities, two with boomtown conditions and one a control. The results indicated that the two models under consideration were not very adequate in understanding the content of residents' lifeworld, but were highly successful in assessing well-being. The boomtown variables increased rural ambivalance, caution in accepting new ideas, and modernity, therefore indicating that boomtowns introduce a slight change in lifeworld, however, none of the lifeworld change variables hinted at disruption. More extensive time series analysis of the boom phenomenon and its impact on the lifeworld is needed. References, tables and figures are appended. (JHZ)

Identifiers—*College of Saint Rose NY, New York

Recognizing that New York State has one of the largest rural populations in the United States and that it is impossible to institute special curricula at the College of Saint Rose (CSR) to train future special education teachers for rural areas, this manual was compiled to provide CSR Education Division faculty with a guide to available existing resource materials in rural education which would permit selection of objectives, competencies, activities, and/or materials appropriate to a specific course/topic and to supplement and complement existing course materials. Primary resources were the 19 Rural Education Preservice Modules prepared by Western Washington University's National Rural Research and Personal Preparation Project. Five major competencies were identified from Marrs' "A Bandwagon Without Music: Preparing Rural Special Educators": awareness of the nature of rural schools and their surroundings, understanding of differences involved in serving handicapped students in rural and urban settings, knowledge of "state of the art" rural special education, skills in working with parents of rural handicapped students, and understanding of personal development skills for professional growth and for building local support system. Sample and content activities to meet these competencies are excerpted or cited from the National Rural Project Modules. A list of the 19 Rural Project Modules and a 35-item bibliography complete the document. (NEC)

Descriptors—Census Figures, *Economic Factors, Economic Research, *Employment Patterns, *Hypothesis Testing, Migration Patterns, Models, Population Trends, *Rural Development, Rural Population, Socioeconomic Influences, Unemployment, *Urban to Rural Migration

Identifiers—*Economic Impact, *Michigan

Consequences of population turnaround for rural economic development are examined in a 9-county region of Northern Lower Michigan. Data from census reports and 374 usable responses to a questionnaire mailed to a random sample of property owners drawn from 1982 county tax assessment rolls were used to test competing hypotheses about rural development consequences: economic infusion (or positive economic impact); economic overload (or negative impact on unemployment and increased competition for jobs); and a contingent eclectic model in which the balance of positive/negative impacts differ depending on the socioeconomic composition of the reverse migration stream and the receiving region. Data indicated that population growth in the region was associated with substantial increases in unemployment compared with the statewide average. Findings supported elements of all hypotheses. The major finding that blue collar persons (both newcomers and long-term residents) experienced higher unemployment rates than white collar persons provided greatest support for the contingent eclectic model. To the extent that retirees (44% of sample) stimulated demand for goods and services, without increasing competition in labor markets, partial support was found for the economic infusion theory. For white collar strata, economic infusion was supported; for blue collar strata, economic overload theory was supported. References and tables are appended. (Author/NEC)

Descriptors—Agricultural Education, Citizen Participation, *Community Development, Program Content, Program Costs, *Program Evaluation, *Rural Development, Secondary Education, *Student Characteristics, Student Volunteers, *Teacher Characteristics, Vocational Education

Identifiers—*Building Our American Community Program, *Future Farmers of America

Surveys administered to 48 state student representatives and 46 chapter advisors attending the 1983 National Future Farmers of American (FFA) Conference on Community Development provided data about the Building Our American Communities Program (BOAC), which originated in 1970 as vocational agriculture's vehicle for high school level community development programs. Findings revealed that: students excelling in BOAC programs do not represent a select segment of the national vocational agriculture population; advisors support other community/professional organizations; community development topics perceived as important by advisors differed from those students identified as the ones they were most capable of doing; typical of community development/volunteer efforts occurring nationally, more BOAC projects are conducted in rural/small towns than central cities or suburban areas; although a majority of projects were conducted in regular high schools by single teacher agriculture departments with 80 or fewer FFA members, exemplary BOAC projects can be conducted in non-traditional settings. Other findings indicated that: school/education, civic facilities, agriculture, and recreation were the most frequent choices for improvement projects; project funding levels ranged from $0 to $802,000 with $2,200 representing the median; advisors took more active roles in planning rather than executing projects; and program involvement increased citizen participation, development of FFA member human relation skills, and public awareness of vocational/agricultural programs. Descriptors—Ability, *Alaska Natives, *American Indian Education, *Attitudes, Family Influence, *High Achievement, *Leadership Qualities, Life Satisfaction, Questionnaires, Socioeconomic Influences, *Success, Teacher Influence, Values

Identifiers—Alaska (Southeast), Haida (Tribe), Tlingit (Tribe), Tsimshian (Tribe)

Characteristics were profiled for 40 southeast Alaskan Haida, Tlingit, and Tsimshian tribal members in positions of responsibility in business, government, or a profession. Respondents had found school easy, did well, liked school, and participated in school-related activities. Positive influence and encouragement of family members, especially mothers, were important success factors. Families viewed school as important and expected children to do well. Over half the respondents indicated teachers as a key influence outside the immediate family, with advice, push to action, and role model the most frequent forms of encouragement. Positive learning experiences outside of school were important, especially experiences involving social skills. Family socioeconomic level had a positive effect on future success. Family members of 80% of respondents were clan, church, or community leaders or were recognized for some skill. Establishment of goals was important to success, with deciding to go to college the most common goal. "Making a contribution to society" and "being at peace with oneself" were the most used definitions of success. Respondents felt they had had many opportunities to succeed, but had encountered barriers of racism and lack of money. Applications to educational situations are suggested. Questionnaire, tabulated responses, and respondents' comments form the appendix. (LFL)

dent Attitudes, Teacher Education
Identifiers—*Native Indian Teacher Education Program, Omnibus Personality Inventory, University of British Columbia (Canada)
Retention attrition in a special elementary teacher preparation program at the University of British Columbia was studied over a 9-year span with 130 American Indian freshmen. Background variables such as age, gender, marital status/parenthood, ethnic status, entrance year, and locality did not differentiate graduates from non-graduates except that the married student rate of graduation was significantly higher. The freshman Omnibus Personality Inventory (OPI) contrasted significantly with eventual outcome on Impulse Expression, Personal Integration, Anxiety Level, and Response Bias, indicating the lesser socio-emotional adjustment of the non- graduates. Graduates were found to be internally oriented and well-adjusted with positive self-attitude and good academic adjustment. Non-graduates were found to be impulsive with less personal integration, high anxiety, and a more negative self- image. No Intellectual Disposition Category (IDC) differences were found. The findings are discussed in terms of their use and limitation in explaining the complexity of student persistence and the OPI is recommended as an appropriate culturally unbiased psychological tool for use in counseling American Indian university students. Freshmen mean t-scores on the 14 OPI and IDC scales are provided. (Author/LFL)

Descriptors—Adventure Education, Attitude Measures, Day Programs, Delinquency, *Delinquent Rehabilitation, Demonstration Programs, *Experiential Learning, Field Experience Programs, Illegal Drug Use, *Outcomes of Education, Program Design, Program Evaluation, Secondary Education, Student Characteristics, Vocational High Schools, *Vocational Rehabilitation, Volunteer Training
Identifiers—*De La Salle Vocational Day Treatment Center PA
The role of experiential education is the focus of this paper describing the treatment program at De La Salle Vocational, a day vocational high school for adjudicated delinquent youth. The paper begins by discussing the characteristics and needs of the students and describing the Off-Campus Program, a 3-year research model designed to address the students' need for life skills. Four off-campus, experience-based learning modules are explained: (1) stress/challenge courses adapted from Outward Bound; (2) service learning courses based on the work of the National Commission of Resources for Youth and the National Student Volunteer Program; (3) adventure learning courses combining active experiences with traditional subject areas; and (4) community based learning that combines intensive study of one topic area while interacting in the community. The overall treatment program is illustrated through the example of a fictitious student named Rich whose experiences are used to demonstrate the integration of academic and vocational skills with experiential learning. The final part of the paper reports preliminary findings of the project evaluation, which show significant changes in both drug use and legal involvement following the treatment program. Pre- and post-treatment results are discussed for frequency of drug use, number of arrests, interpersonal maturity, family roles, self-esteem, and school problems. A list of selected references is provided. (JHZ)

Identifiers—*United States
Statistical tables, graphs, and photographs accompany this narrative summary that highlights 1980 census information abut Hispanics in the United States and emphasizes Hispanic progress since the 1970 census. Comparisons are made between 1970 and 1980 census information and between Hispanics and the total United States population. Text is presented in Spanish and English on facing pages, and tables and graphs are labeled in both languages. Broad topics are population growth and distribution, population age, family characteristics, education, voter participation, and future trends. Hispanic population growth is reported as having increased by 61% from 1970, up to a total of 14.6 million or 6.4% of the total population. Tables show Spanish-origin persons by race and by four Hispanic groups–Mexican, Puerto Rican, Cuban, and other Spanish. Census data are cited showing that in comparison to the total population the Hispanic population is substantially younger, has fewer years of schooling, is more likely to be unemployed, and is less likely to vote. Progress since the 1970 census is noted for percentage of high school graduates and for women's educational attainment. Discussion of future trends includes prediction of continued population growth and the need for jobs and appropriate education. (JHZ)

Identifiers—Congress 99th
These papers provide indepth analyses of barriers to and proposals for economic development on Indian reservations. The collection is a follow through to April 29, 1982 hearings of the Select Committee on Indian Affairs of the United States Senate. Alan R. Parker and Charles Trimble survey Indian economic development issues including the federal role, tribal experience, legal questions of development, and capital and financing issues as well as listing relevant federal assistance programs. Eric D. Eberhard examines the American Indian Development Finance Corporation in the context of federal Indian law. Eric Natwig describes institutional barriers to financing development projects in Indian country and establishes the need for an independent development finance institution. Ronald L. Trosper estimates capital needs for an American Indian Development Finance Corporation. Lorraine Turner Ruffing discusses initiatives in development finance including domestic and international programs and institutions. A second paper by Trosper offers guidelines for project evaluation on reservations, applying cost-benefit analysis and social accounting matrices to four hypothetical projects. Reka Potgieter Hoff discusses tribal taxation and economic development. Tables and explanatory notes accompany the papers. (LFL)

Identifiers—Economic Concepts, *Economic Effects, Economic Influences, *Farm Women, Labor Studies, North Dakota, Rural Sociology, Rural Women, Valuation Theory
Researchers explored farm women's economic contributions to the family farm–an economic contribution traditionally underestimated or ignored –employing use value production as an indicator of labor. Active labor, usually defined as commodity production, was broadened to include value production, or all activity contributing to making a living. Household and farm task performance was measured (controlling for time of season and size and type of operation), comparataive labor inputs were investigated, and off-farm employment motives and earnings were explored. Questionnaires returned in 1983 by 88 farm families in the eastern half of North Dakota provided data. Women were found to contribute more labor to farm tasks in the fall, on smaller farms, and on livestock farms, contributing at least 40 hours a week on the average to farm tasks. Women also performed 80% of the household tasks which consumed 80 hours a week on the average. Nearly one in three women reported off-farm employment; non-farm expenses and maintaining their careers were major reasons given. Distance and lack of available employment were found to pose the most difficulties for farm women in off-farm employment. Tables and figures present survey data by farm size and type and illustrate off-farm employment; an appendix lists farm and household tasks used in the survey. A short list of references concludes the document. (LFL)

Identifiers—*Girl Scouts of the USA, Scouting
With much to offer rural girls as well as much to learn from them, Girl Scouting is trying to reach more girls and adults in rural areas. The challenges include economic setbacks for farming, unemployment, isolated populations, and changing rural culture. Along with the challenges are the many resources of rural areas and the congruence between Girl Scout beliefs and principles and the outlooks of persons in rural areas. To expand rural Girl Scouting it has been helpful to recruit and train indigenous leadership and to establish support systems to meet local needs. The variety of innovative Girl Scout models for rural areas has included establishment of consolidated schools committees, community troop committees, hot line leaders, neighborhood learning centers, and library resource centers. Alternative models focus on meeting patterns, including designs for Girl Scout range/farm troops and Girl Scout troops where the program is delivered through the mail. Programs for rural areas include those focused on health and safety, the out-of-doors, and opportunities for the rural girl within and beyond her local area. Girl Scouting is committed to addressing the needs of rural girls and to collaboration with related groups such as the Rural Education Association. (JHZ)

Identifiers—Fort Belknap Reservation MT, *Montana (Blaine County), *Montana (Hill County), Rocky Boy Reservation MT

A fact sheet reported medical care costs incurred and funding sources received by county and local governments in Blaine and Hill Counties, Montana, to provide care for indigent Indians. Data obtained from county clerk and recorder offices and welfare departments showed that Blaine County spent about 1% of its operating revenue on indigent medical care in fiscal years 1982-85 and incurred 21% of its indigent medical care costs for Indians in fiscal years 1984-85. Hill County spent 2% of its operating revenue on indigent medical care in fiscal years 1982-85 and incurred 32% of its indigent medical care costs for Indians. Neither county received federal funds for indigent medical care during the 4-year period. Property taxes provided 95% of Blaine County funds and 94% of Hill County funds for indigent medical care; 18.4% of Blaine County's and 4% of Hill County's property tax base were found to be nontaxable Indian lands comprising the Fort Belknap and Rocky Boy Reservations. Four tables provide county revenue/cost schedules and county costs for indigent Indian medical care; four figures illustrate sources of funding. (LFL)

**The Image of the Native American in Young Adult Fiction (1960-1985).**
Pub Date—Mar 86
Note—71p.; Master's Thesis, University of Chicago.
Pub Type— Dissertations/Theses - Masters Theses (042) — Reports - Descriptive (141)
**EDRS Price - MF01/PC03 Plus Postage.**
Descriptors—*Adolescent Literature, American Indian Culture, *American Indian Literature, *American Indians, Characterization, Content Analysis, *Cultural Images, *Ethnic Stereotypes, Fiction, Life Style, Literary Criticism, Secondary Education, Social Problems, *Trend Analysis, Tribes

The portrayal of the American Indian in young adult fiction was studied through the examination of 23 works of realistic or historical fiction published from 1960 to 1985. Books selected from the card catalogue at the Center for Children's Books at the University of Chicago were primarily about Indians or Indian life, and were appropriate for readers at grade 7 or above. All selections were read and analyzed to determine trends in the portrayal of the American Indian. Analysis included diversity of the literature, types of themes and issues, story settings, tribes, and main characters. Results showed significant changes in the image of the American Indian in the years under study. From 1970 to 1979 works available grew in diversity, and story settings become more varied and realistic. Alcoholism was the most frequently discussed issue in books from the 1960's, but later works looked at a broader range of issues including feminism and ecology. The portrayal of tribes moved from traditional and conservative in the 1960's to greater accuracy and diversity in the 1980's. There is still a need to improve accuracy in many areas of the works studied and a need for more literature by American Indian authors. (JHZ)

**Clustering for School Improvement. A Report on Rural Clusters.**
Mid-Continent Regional Educational Lab., Aurora, CO.
Pub Date—Feb 85
Note—18p.
Pub Type— Reports - Descriptive (141)
**EDRS Price - MF01/PC01 Plus Postage.**
Descriptors—*Cluster Grouping, College School Cooperation, Consortia, Cooperative Planning, Cooperatives, *Educational Cooperation, *Educational Improvement, Elementary Secondary Education, *Problem Solving, Program Descriptions, *Rural Education, School Districts, Small Schools
Identifiers—Colorado, Kansas, Mid Continent Regional Educational Laboratory CO, Missouri, Nebraska, North Dakota

Ten rural school improvement clusters involving 63 districts, 7 colleges and universities, and 6 state departments of education have been deveioped in Colorado, Kansas, Missouri, Nebraska, and North Dakota through the work of the Mid-Continent Regional Educational Laboratory's Rural Education Project. Four essential steps appear necessary for forming a rural school cluster: identification of similar sized schools within reasonable driving distance of each other, commitment of technical expertise from neighboring higher educational institutions, contact with key persons in the state's educational agency, and development of an agenda for the cluster by participating districts. Clustering is a strategy that can be implemented in a wide variety of settings and that can address a range of diverse needs. A 5-district Colorado cluster is improving rural science instruction through inservice training, adoption of a common philosophy of science teaching, and sharing of successful classroom strategies. A Kansas consortium is conducting professional development seminars on challenging gifted students, "effective schools research," and teacher evaluation. Three Missouri rural cooperatives are focusing on staff training in instructional and administrataive microcomputer use. Nebraska schools are participating in a joint K-12 curriculum development program. North Dakota cluster activity is exploring the role of rural schools in community and economic development. (NEC)

Identifiers—Alaska, Piagetian Research, *Tlingit (Tribe)

A research strategy is presented which enables the development of science and mathematics curriculums for American Indian and Alaska Native children of diverse cultures based on existing subsistence knowledge and skills. This strategy assumes that American Indian and Alaska Native adults implicitly make use of many formal science and mathematics principles while engaging in subsistence activities, and that their children acquire a latent ability to understand these formal concepts by observing and participating in these activities. Recent studies in cross-cultural psychology and psychological anthropology are cited in support of the position that children learn complex cognitive skills based on participation in common cultural activities. Ethnographic and Piagetian research methods are proposed for a 2-year study to assess the existing science and mathematics knowledge among the Tlingit Indians of southeast Alaska where a pilot project is now underway. Discussion is limited to an analysis of the ways of researching indigenous physics knowledge. However, the research design can be adapted to any cultural group and be utilized to develop procedures for teaching the formal aspects of any subset of Western physical science or mathematics knowledge in classroom situations. A five-page bibliography concludes the document. (NEC)

Descriptors—Computer Literacy, *Computer Science Education, *Ecology, *Environmental Education, Grade 6, Intermediate Grades, Outdoor Education, *Program Evaluation, *Resident Camp Programs, Science Education, *Technology
Identifiers—*District of Columbia, Environmental Education Research

This report presents a description and evaluation of the Nature-Computer Camp (NCC), a science- and technology-oriented program for sixth-grade students from the District of Columbia Public Schools. The NCC experience is designed to offer students opportunities in such environmentally-related areas as woodland ecology, stream ecology, geology, as well as in the development of computer skills. Major sections include: (1) background and project description (highlighting program philosophy, history, and content); (2) external evaluation design (explaining the planning, monitoring, and implementing the evaluation model); (3) evaluation results for the 424 students in the summer 1985 program (specifying findings for each of the program's four major objectives); and (4) appendices (presenting samples of the camp schedule, questionnaires, student knowledge and attitude tests, and teacher and counselor checklists for student competencies, skills, and social behaviors). Results, among others, show an increase in attitude scores, a mean score approximately equivalent to mastery of the designated computer and science skills, and a mean score approximately equivalent to acquisition of 91 percent of socialization skills. Identifiers—*Science Education Research

This review covers approximately 300 studies, including journal articles, dissertations, and papers presented at conferences. The studies are organized under these major headings: status surveys; scientific reasoning; elementary school science (student achievement, student conceptions/misconceptions, student curiosity/attitudes, teaching methods, and technology/microcomputers); junior high science (student achievement, student attitudes, student concepts/misconceptions, teaching methods, and others); high school general science (student characteristics, classroom behaviors, and curriculum); high school physical science (teaching methods, testing methods, and technology/microcomputers); high school earth science (student characteristics,

teaching methods, and curriculum); high school biology (student characteristics, teaching methods, and others); high school chemistry (student conceptions/misconceptions, testing, and others); high school physics (student conceptions/misconceptions, student attitudes, teaching methods, curriculum, and testing); university geology; university biology (student characteristics, textbooks, problem-solving, curriculum, and others); university chemistry (teaching methods, curriculum, textbooks, and others); university physics (student conceptions/misconceptions, problem-solving, and others); informal science education; specific interests; preservice teacher education; inservice teacher education; and research methodology (clinical interviews, time-series, aptitude-treatment interaction, qualitative research, meta-analyses, and attitude measures). A bibliography of studies reviewed is included. (JN)

Descriptors—*Curriculum Development, Elementary Secondary Education, *Environmental Education, *Holistic Approach, Science and Society, *Science Education, *Technology

Holistic environmental education is viewed as a means of assisting in a long-term resolution of environmental degradation. Guidelines for a holistic environmental science curriculum are outlined for teachers and curriculum developers in this document. Major areas addressed include: (1) world views (discussing current and emerging paradigms and ideologies); (2) science education (providing suggestions for curricular modifications and adaptations); (3) holistic environmental science education (presenting models for developing environmental awareness, knowledge, skills, attitudes, and behaviors); (4) pedagogy (explaining the benefits of outdoor/inquiry learning, simulations, and case studies); (5) procedural frameworks (offering an example of how topics, skills, concepts and attitudes can be organized). Identifiers—*Environmental Education Programs

An integration of the humanities and the sciences is proposed as being essential for the creation of a holistic environmental ideology. Language arts is identified as the means for integrating other subjects around environmental themes. The acculturative role of the language arts and its influence in developing biological, cultural, and social understanding is explained. Specific suggestions are offered that illustrate the integrative potential of the language arts. These include techniques involving: (1) reading and comprehension skills; (2) listening activities; (3) interviewing; (4) vocabulary development; (5) speech and dramatics; and (6) creative writing. This guide opens with a brief statement on rationale and philosophy, with active learning, problem solving, and technology emphasized. Goals and objectives are stated and desirable characteristics of elementary mathematics programs are presented. The following program elements are discussed: problem-solving skills, attitudes, and mathematical concepts for five strands: numeration, operations and properties, measurement, geometry, and graphing. Program structure, allocation of time, and prescribed resources are noted, the objectives, by strand, are listed for grades 1 through 6, and instructional approaches are discussed. Appendices present the National Council of Teachers of Mathematics recommendations, study notes and comments for each grade level by objective, some suggested ideas for extension and enrichment topics, and calculator guidelines. These guidelines were developed to provide assistance to Alberta schools in the development of policy for the use of calculators in classrooms, and also to provide some assistance to teachers in planning appropriate experiences for students. A position statement advocating the use of calculators as both instructional and computational aids is presented. Guidelines for their use are then given by level (primary, intermediate, junior high, high school). A research summary is included as Appendix A; Appendix B contains suggestions for calculator selection; Appendix C details the National Council of Teachers of Mathematics recommendation on calculators; and Appendix D provides summaries of some individual research reports. Finally, Appendix E presents the policy statement on the use of calculators on provincial examinations. (MNS)
